

Look for the Danfoss Holospot® Your 100% guarantee of genuine quality

Looks can be deceptive

There are some very clever copies of Danfoss Filter Driers on the market. At first glance, they can look just like the 100% genuine originals. But, like precious gemstones, they differ in one crucial respect. Quality.

2 levels

of security

to protect your reputation.

Only 100% genuine Danfoss Filter Driers carry the new Danfoss Holospot®

It only takes a minute to check that you are getting the real thing.

Every Danfoss Filter Drier now carries a unique Holospot® security label. We have designed it to be impossible to fake, so you can be certain that what you hold in your hand is the real thing. Giving both you and your customers complete peace of mind.

Don't take a chance

If you accidentally buy fake Danfoss Filter Driers, you risk your reputation and, potentially, the reputation and safety of your customers. Not to mention their end-users. Ignorance is no defence, so always check for the Danfoss Holospot® before accepting delivery.

Two levels of security

1. With the naked eye: The Holospot® security code is easy to read quickly with the naked eye. Simply hold the label in direct light and look for the Danfoss logo and a two-digit alphanumeric code. No need for ultraviolet or other special lighting.
2. Using a simple magnifying glass: For further security, with nothing more than a standard magnifying glass you can even read a 10-digit code below the Danfoss logo. The 10-digit code is unique for every Holospot® label and you will never find two similar 10-digit codes. Check also that the last two digits match those you can see with your naked eye.

Help us to beat illegal and dangerous product piracy

Developing the new Danfoss Holospot® is a key part of our ongoing fight against illegal and dangerous product piracy.

If you suspect that someone is trying to sell you a fake Danfoss Filter Drier or any other Danfoss product, please let us know by emailing piracy@danfoss.com

Protect your reputation

If you accidentally fit fake Danfoss Filter Driers in your systems, you may be legally liable for any subsequent failures or damage suffered by your customers or their end-users. Don't take a chance. Always check for the Danfoss Holospot®.
