

Danfoss EKE 347 liquid level controller

# Powerful interface, easy setup and Modbus ready

## Take local control to the next level

The Danfoss EKE 347 liquid level controller is used for regulation of the liquid level. The controller is connected with a level sensor that continuously measures the liquid level in the vessel/reservoir. With the user friendly interface and remarkable network connectivity capabilities, EKE 347 upgrades the control to a new level.

### Friendly

EKE 347, an intuitive and easy to navigate controller with Modbus network capability.

The EKE 347 controller is used for regulation of the liquid level in:

- Pump reservoirs
- Economizers
- Separators
- Condensers
- Intermediate coolers
- Receivers

The controller receives a 4-20mA signal from a guided radar sensor AKS4100(U) which accurately measures the liquid level in vessels/reservoirs.

Advanced algorithms provide analogue or digital signals to modulate ICM motorized valves or solenoid valves respectively.

Home screen:

- Customizable controller name
- Controller status
- Actual level reading
- Status of high level alarm
- Status of refrigerant pump (or low level alarm)
- Actual opening degree

✓ **Clear Information: graphical and full text display**

- No user-guide required during set-up
- More parameters and alarm information available
- Users can get multiple fundamental real-time values via the LCD display on the home screen

✓ **Easy Communication: deep integration with PLC based systems**

- Standard industrial PLC systems supporting Modbus-RTU communication
- Eliminates labor-intensive wiring of:
  - Individual analogue signals
  - Digital alarm signals and relays
  - Analogue input cards/channels on PLC

✓ **Information and Control in One Place: an easy and powerful remote graphical interface connects to multiple EKE controllers providing:**

- Access to real-time status of connected devices
- Change settings from a convenient location
- An easy door-mount panel interface
- Reduced wiring and commissioning time
- A plug and play solution - featuring standard RJ12 connectors while no additional power supply required for its operation

Danfoss MMIGRS controls all connected EKE 347 level controller thru CAN bus.
