

Technical information

Danfoss Outdoor Cabinet

	L mm	W mm	H mm	H1 mm	A mm	Code number
Single condensing unit	766	456	353	312	700	118U4620
TWIN condensing unit	856	536	414	363	800	118U4621

- Outdoor installation avoids stress caused by temperature and noise and saves space inside.
- The weather-proff cabinet is prepared for wall and floor installation and can be placed anywhere outdoors.
- Assembly of the complete cabinet is simple.
- The dimensions of the weather-proof cabinet are specially adapted to Danfoss Blackstar condensing units.
- Two versions are available: For single and for twin condensing units.
- The weather-proof cabinet consists of an angular base (black RAL 9011 mat), on which the condensing unit is mounted, and a cover (beige RAL 1001 mat).
- Both sections are made of solidly welded steel sheet that is covered with a high-grade polyester powder coating. This makes the weather-proof cabinet extremely strong and splash-proof.

- In the base there are various holes that are intended for pipes and the electrical wiring.
- The cover allows for good ventilation. It is possible to use the unit at ambient temperatures from -30°C to $+32^{\circ}\text{C}$, however, at temperatures below 10°C a compressor crankcase heater is required. This can be ordered from Danfoss. Code number: 192H2096, 55 W 220 V.
- The weather-proof cabinet is supplied with the required fixing accessories (screws, rubber grommets and dowels) for wall or floor installation, respectively.
- On delivery the cabinet is fixed onto a specially adapted wooden pallet and is covered by a stable card-board box.
