

**BD35F and BD50F Compressors
UL Approval**

Introduction

We are pleased to announce that the BD 35F and 50F have been UL approved.

Background

It's not mandatory that the BD types should be UL approved as they are considered low voltage devices.

The reason why we applied for UL approval is that some BD customers need the approval in order to have the complete system UL approved.

For customers operating in USA it will be a sales feature in general that the BD is UL approved. It should be used proactively in sales situations.

Code no

The code nos included are:

BD 35F:	101Z0200	Standard
BD 35F:	101Z0204	Inch connections
BD 50F:	101Z1220	Standard
BD 50F:	101Z0203	Inch connections
Electronic:	101N0210/211	Standard
Electronic:	101N0220/221	EMI shielded
Electronic:	101N0300/301	AEO version

File no

The UL file no will be the same as for the other Danfoss household compressors.

SA3693

The file will be available from the UL web page or can be forwarded on request from Danfoss.

Availability

Effective from week 27 – 2003; compressors will be marked with the UL label. See drawing below.

Our stock of BD compressors will not be updated. This means that compressors bought after week 27 may still be without UL label.

Literature

The instruction and data sheets will be updated when the next revision takes place.

The label

The label will be placed as shown on the photo below.
