PLUS+1[®] Safety Controllers

SC050-120 and SC050-122

Advanced mobile machine management

These PLUS+1[®] SC controllers are advanced elements of the PLUS+1[®] family of mobile machine management products. The design of this general purpose controller includes features required for sophisticated machine control strategies. It is equally suited for use in safety related or general machine control applications.

These controllers are pin compatible with the PLUS+1[®] MC equivalent controller. These controllers have dual processors with the secondary processor having access to all controller inputs and supervisory control of outputs. These controllers support smart digital inputs. Current measurement capability has been added to some multifunction inputs. Device outputs can be individually controlled by the secondary processor. These controllers support low power capability.

The SC050-122 controller has an application key that enables the use of Danfoss developed GUIDE machine control solutions. The same GUIDE HWD files are used with both controllers. The user can develop applications for these controllers using the PLUS+1[®] GUIDE development environment. Application code can be written for both the primary and secondary processors.
