If your product is not listed, please contact your local Danfoss Drives representative.

Four levels of coverage

1. Self-service spare parts are available on an individual component ordering basis. Self-service spare parts include those components used in basic drive maintenance and they can be installed by personnel with no formal service training.

2. Maintenance spare parts assortment is a set of components for one specified drive type. This set supports the planned maintenance program for your installed base, extending lifetime by replacing worn-out or degraded components. When this set of parts is stored on site, you are ready for planned maintenance.

3. Recommended spare parts assortment is an optimized set of components. The content is customized according to the full range of drives installed on the site, and supports the planned maintenance program. When this set of parts is stored on site, you are safe. You ensure:

- No production stop due to lack of spare parts
- High uptime on the installed base

4. Suitcase assortment is a set of the vital spare parts for a specific drive, contained in a suitcase, in preparation for critical repairs. This set contains all components required to enable repair of the unit in one visit by a service technician. You cut downtime to an absolute minimum, since there are no extra delays in repair due to missing components or time for extra deliveries. The suitcase assortment is available for drives rated above 90 kW.
