Installation Instructions

Remote Mounting of LCP

VLT® HVAC Drive FC 102

Items Supplied

- LCP cables with 2 M12 connectors (90° male connector and straight female connector). Cable lengths: 3 m, 5 m, and 10 m (10 ft, 16 ft, 33 ft). See also Table 1.1.
- Blind cover with M12 female connector.
- Base plate with D-sub connector and M12 male connector.
- Two gaskets and 1 nut for the D-sub connector.
- Intermediate cover with the front cover.
- Disassembly tool.

Table 1.1 Cable Ordering Numbers

More Items Required

- Local control panel (LCP).
- Four M4 self-tapping screws for mounting.

**NOTICE**

This instruction is valid for frequency converters that were ordered with the LCP. Front covers of frequency converters that were ordered without LCPs do not have holes for mounting the blind covers.

Safety Instructions

For important information about safety precautions for installation, refer to the product-specific operating guide.

**WARNING**

**DISCHARGE TIME**

The frequency converter contains DC-link capacitors, which can remain charged even when the frequency converter is not powered. High voltage can be present even when the warning LED indicator lights are off. Failure to wait the specified time after power has been removed before performing service or repair work can result in death or serious injury.

- Stop the motor.
- Disconnect AC mains and remote DC-link power supplies, including battery back-ups, UPS, and DC-link connections to other frequency converters.
- Disconnect or lock PM motor.
- Wait for the capacitors to discharge fully. The minimum duration of waiting time is specified in .
- Before performing any service or repair work, use an appropriate voltage measuring device to make sure that the capacitors are fully discharged.

#### Mechanical Installation

**NOTICE**

The guidelines in this instruction are applicable for a frequency converter in a standard configuration without any modifications.

**Installing the blind cover**

1. Remove the front cover from the frequency converter and then remove the LCP, see *Illustration 1.1*.

2. Install the blind cover with the gasket and the M12 connector.

3. Install the front cover on the frequency converter, see *Illustration 1.2*.

*Illustration 1.1 Frequency Converter with the LCP Removed*
Illustration 1.2 Frequency Converter with the Blind Cover

Mounting the remote LCP

1. Drill the hole in the wall that holds the LCP. The hole diameter: 24 mm ± 1 mm (1 in ± 0.04 in). To ensure that the base plate adjoins the wall, drill the hole perpendicular to the wall (± 1°). The kit is suitable for insulated walls 30–90 mm (1.2–3.5 in) thick and solid walls 1–20 mm (0.04–0.8 in) thick.

2. Install the base plate with the D-sub connector. Use the gasket and 4 self-tapping screws to secure the plate. See Illustration 1.3.

3. Put the nut on the D-sub connector and tighten it with torque of 1.5 Nm (13 in-lb). Ensure that the base plate and the nut are tight on both sides of the wall. For very thin walls, the nut can also be turned 180°. See Illustration 1.4 and Illustration 1.5.
4. Mount the LCP with the gasket on the base plate. Insert the rubber flap in the opening at the top of the cradle, see Illustration 1.6 and Illustration 1.7. Illustration 1.8 shows the base plate with the LCP.

1. Rubber flap
2. Opening at the top of the cradle

Illustration 1.6 Insert the Rubber Flap into the Opening
5. Mount the intermediate cover and lid on the base plate. The cover has a click-on type connection. Connect the top of the lid to the cradle and then push it until it clicks. The unit with this cover has rating IP54. See Illustration 1.9, and Illustration 1.10.
Electrical Installation

Connect the M12 connectors on the blind cover and the LCP with the supplied cable. See Illustration 1.11.
Areas with Gaskets on the Remote Unit

To make the remote unit more secure, the following areas are tightened with gaskets:

Using the Remote LCP

The cover on the remote LCP has the following features:

Illustration 1.13 Remote LCP with the Cover

- The On, Warn., and Alarm indicator lights are visible with the closed front cover. Lights are visible at an angle up to 45°.
- Lock the front cover using the rings at the bottom of the cover. See Illustration 1.15.
- Open the front cover using the groove at the side of the cover. See Illustration 1.14.
- The cover has a place for a label.

Drilling Template

Place the drilling template against the wall to mark the hole locations. The scale of the template is 1:1.
