Installation Instructions

MDCIC Spare Part Kit for F1–F4/F10–F13 Enclosure Sizes

1.1 Description

The MDCIC spare part kit contains all components required to replace the multi-drive control interface card (MDCIC) in F1–F4 and F10–F13 enclosure sizes.

1.3 Safety Instructions

1.3.1 Qualified Personnel

Correct and reliable transport, storage, installation, operation, and maintenance are required for the trouble-free and safe operation of the frequency converter. Only qualified personnel are allowed to install or operate this equipment.

Qualified personnel are defined as trained staff, who are authorized to install, commission, and maintain equipment, systems, and circuits in accordance with pertinent laws and regulations. Also, the qualified personnel must be familiar with the instructions and safety measures described in this installation guide.

**WARNING**

**ELECTRICAL SHOCK HAZARD**

VLT® frequency converters contain dangerous voltages when connected to mains voltage. Improper installation, and installing or servicing with power connected, can cause death, serious injury, or equipment failure.

To avoid death, serious injury, or equipment failure:
- Only use qualified electricians for the installation.
- Disconnect the frequency converter from all power sources before installation or service.
- Treat the frequency converter as live whenever the mains voltage is connected.
- Follow the guidelines in these instructions and local electrical safety codes.

**WARNING**

**DISCHARGE TIME**

The frequency converter contains DC-link capacitors that can remain charged even when the unit is off. High voltage can be present even when the warning indicator lights are off. Failure to wait a minimum of 40 minutes after power is removed before performing service work can result in death or serious injury.

1. Stop the motor.
2. Disconnect AC mains and remote DC-link supplies, including battery back-ups, UPS, and DC-link connections to other frequency converters.
3. Disconnect or lock PM motor.
4. Wait 40 minutes for the capacitors to discharge.
5. To verify full discharge, measure the voltage level.

1.4 Disassembly Guidelines

**NOTICE**

**PARTS REUSE**

Retain all fasteners and parts, except the old MDCIC, for reuse during installation. Replacement scaling cards are not included with the new MDCIC. Retain the scaling cards for reinstallation on the new MDCIC.
1.4.1 Identifying the MDCIC Issue Number

Use these steps to find the issue number of the multi-drive control interface card (MDCIC) before removal. The issue number indicates whether to install the jumper cable included with this kit.

1. Detach 2 screws from the MDCIC cover and remove the cover. See Illustration 1.1.

2. Review the following information on the MDCIC barcode label. See Illustration 1.2.
   
   1a Assembly number (characters 1–8).
   1b Serial number (characters 9–12).
   1c Issue number (character 13).
   1d Revision number (character 14).

3. Note the MDCIC issue number (character 13).
   
   3a If this character is 1–5, connect the jumper cable provided with this kit to MK111 on the new MDCIC. See Illustration 1.3 and Illustration 1.5.
   
   3b If this character is 0, disconnect the Safe Torque Off (STO) cable from MK111 on the old MDCIC and retain it.

Illustration 1.3 Jumper Cable (178N0167)
1.4.2 Removing the MDCIC

Use the following steps to remove the MDCIC from the mounting panel. Refer to Illustration 1.4 and Illustration 1.5.

**NOTICE**

**BEFORE DISASSEMBLY**

To make cable reinstallation easier, note the position of the following cables before disassembly:

- Inverter module ribbon cables.
- Rectifier control cables.
- STO cable (if any).

1. Disconnect the control card ribbon cable from connector MK100 on the MDCIC by gently pulling the cable to the left.

2. Disconnect the inverter module ribbon cables from the MDCIC.

3. Unplug the rectifier control cables from connectors MK101 and MK102 on the MDCIC. There is 1 cable for F1–F4 enclosures, or 2 cables for F10–F13 enclosures.

4. Remove the MDCIC by detaching the 9 screws (T25) securing the card to the panel standoffs.

5. Remove the scaling cards from the MDCIC. Retain the scaling cards (1 per module) for reinstallation on the new MDCIC.
1.5 Installation Guidelines

1.5.1 Installing the MDCIC

Use the following procedure to install the new MDCIC. Refer to Illustration 1.4 and Illustration 1.5.

1. Reinstall the old scaling cards on the new MDCIC.
2. Attach the new MDCIC to the panel standoffs using 9 screws (T25). Torque to 1.2 Nm (10 in-lb).
3. Connect the inverter module ribbon cables to their original positions (Inverter 1–4) on the MDCIC.
4. Attach the 6-pin rectifier control cables to connectors MK101 and MK102. There is 1 cable for F1–F4 enclosures, or 2 cables for F10–F13 enclosures.
5. Attach the control card ribbon cable to connector MK100.
6. Attach the STO cable to MK111. If no STO cable is present, check that the jumper cable is attached to MK111.
7. Reinstall the MDCIC cover using 2 screws (8 mm). Torque to 2.3 Nm (20 in-lb).
