Fight counterfeits

Looks can be deceptive.  
**Fight counterfeits**  
to protect your image

Genuine Danfoss products are your guarantee of high quality.

**Protect**

your own reputation  
– and the reputation  
and safety of your  
customers. Install  
100% Danfoss  
every time.

# Why use original Danfoss products?

Avoid system breakdowns. Avoid business losses. Protect your reputation.

## Filter driers

Avoid complete breakdown of the system and damage to your goods

Damage caused by water in the refrigerant can be costly. Insufficient drying capacity damages compressors.

If the fake filter core disintegrates, loose fragments can easily block the expansion valve.

## Expansion valves

Avoid losing refrigerant charge and poor energy efficiency

Leakage in the welding of the power element or at the setting screw of the expansion valve may cause the system to lose the refrigerant charge.

A typical downside of counterfeits is reduced operating performance.

## Compressors

Avoid loss of safety, low reliability and reduced performance

A reconditioned compressor that is not homologated is at risk of exploding and causing serious damage. Additionally, incorrect electrical connections may lead to electric shocks.

Reconditioned compressors will not provide the same performance.

## KP pressure switches

Avoid loss of pressure control and damage to your system

The weak connection between bellows and bellows bottom in a fake switch is unreliable and can puncture at any time. This will result in the pressure switch malfunctioning, which can affect performance of the whole application and can also damage other components.

Protect your business.

There are many good reasons to ensure that the product you pick is a genuine Danfoss part.
