1 Quick Guide

1.1 Safety

1.1.1 Warnings

WARNING

High Voltage Warning

The voltage of the frequency converter is dangerous whenever it is connected to mains. Incorrect installation of the motor or frequency converter may cause damage to the equipment, serious injury or death. Consequently, it is essential to comply with the instructions in this manual as well as local and national rules and safety regulations.

WARNING

Electrical Hazard

Touching the electrical parts may be fatal - even after the equipment has been disconnected from mains. Also make sure that other voltage inputs have been disconnected (linkage of DC intermediate circuit). Be aware that there may be high voltage on the DC link even when the LEDs are turned off. Before touching any potentially live parts of the frequency converter, wait at least as stated in the table below:

Voltage [V]	Power range [kW]	Minimum waiting time [min]
3x400	0.37–7.5	4
3x400	11–90	15

CAUTION

Leakage Current:

The earth leakage current from the frequency converter exceeds 3.5 mA. According to IEC 61800-5-1 a reinforced Protective Earth connection must be ensured by means of a min. 10 mm² Cu or an additional PE wire - with the same cable cross section as the Mains wiring - must be terminated separately.

Residual Current Device:

This product can cause a DC current in the protective conductor. Where a residual current device (RCD) is used for extra protection, only an RCD of Type B (time delayed) shall be used on the supply side of this product. See also Danfoss Application Note on RCD, MN90GXYY.

Protective earthing of the frequency converter and the use of RCDs must always follow national and local regulations.

Motor Thermal Protection:

Motor overload protection is possible by setting 1-90 Motor Thermal Protection to the value Electronic Thermal Relay (ETR) trip.

WARNING

Installation at high altitudes

For altitudes above 2 km, please contact Danfoss regarding PELV.

1.1.2 Safety Instructions

- Make sure the frequency converter is properly connected to earth.
- Do not remove mains connections, motor connections or other power connections while the frequency converter is connected to power.
- Protect users against supply voltage.
- Protect the motor against overloading according to national and local regulations.
- The earth leakage current exceeds 3.5 mA.
- The [Off reset] key is not a safety switch. It does not disconnect the frequency converter from mains.

1.2 Introduction

1.2.1 Available Literature

This Quick Guide contains the basic information necessary for installing and running the frequency converter. If more information is needed, literature can be found on the enclosed cd or downloaded from:
<http://www.danfoss.com/Products/Literature/Technical+Documentation.htm>

1.2.2 Approvals

1.2.3 IT Mains

CAUTION

IT Mains

Installation on isolated mains source, i.e. IT mains.

Max. supply voltage allowed when connected to mains:

440 V (3x380-480 V units).

On 380-480 V IP20 0,37-22 kW, open the RFI switch by removing the screw on the side of the frequency converter when at IT grid.

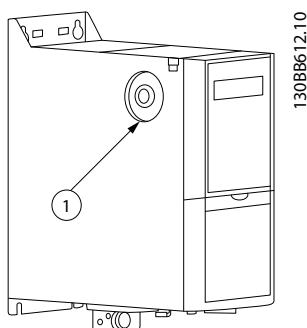

Illustration 1.1 IP20 0,37-22 kW 380-480 V.

1: EMC screw

On all units, set *14-50 RFI filter* to *Off* when operating in IT mains.

CAUTION

If reinserted, only use M3x12 screw.

1.2.4 Avoid Unintended Start

While the frequency converter is connected to mains, the motor can be started/stopped using digital commands, bus commands, references or via the LCP.

- Disconnect the frequency converter from mains whenever personal safety considerations make it necessary to avoid unintended start of any motors.
- To avoid unintended start, always press [Off reset] before changing parameters.

1.2.5 Disposal Instruction

Equipment containing electrical components must not be disposed of together with domestic waste.

It must be separately collected with electrical and electronic waste according to local and currently valid legislation.

1.3 Installation

1.3.1 Before Starting Repair Work

1. Disconnect FC 111 from mains (and external DC supply, if present.)
2. Wait as stated in the table below for discharge of the DC-link:

Voltage [V]	Power range [kW]	Minimum waiting time [min]
3x400	0.37-7.5	4
3x400	11-90	15

3. Remove motor cable

1.3.2 Side-by-Side Installation

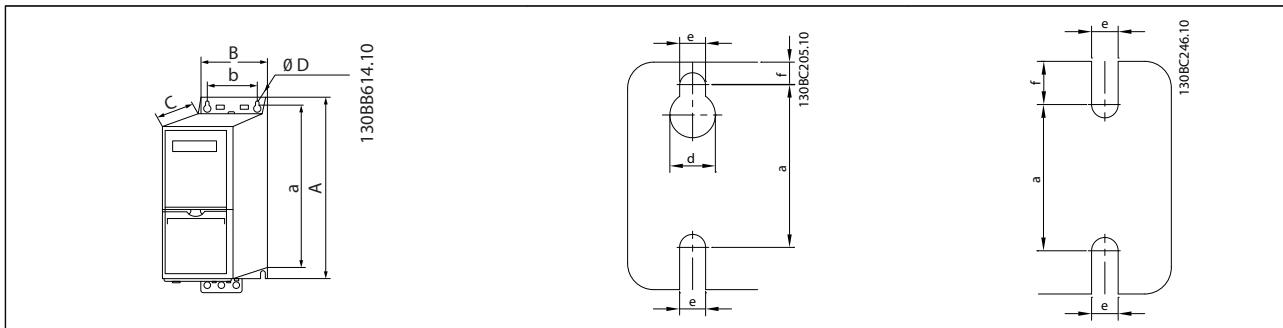

The frequency converter can be mounted side-by-side and requires the clearance above and below for cooling.

		Power	Clearance above/below [mm/inch]
Frame	IP class	3x380-480 V	
H1	IP20	0.37-1.5 kW/ 0.5-2 Hp	100/4
H2	IP20	2.2-4 kW/ 3-5.4 Hp	100/4
H3	IP20	5.5-7.5 kW/ 7.5-10 Hp	100/4
H4	IP20	11-15 kW/ 15-20 Hp	100/4
H5	IP20	18.5-22 kW/ 25-30 Hp	100/4
H6	IP20	30-45 kW/ 40-60 Hp	200/7.9
H7	IP20	55-75 kW/ 100-120 Hp	200/7.9
H8	IP20	90 kW/ 125 Hp	225/8.9

NOTE

With IP21/Nema Type1 option kit mounted, a distance of 50 mm between the units is required.

1.3.3 Mechanical Dimensions

		Power	Height [mm/inch]			Width [mm/inch]		Depth [mm/ inch]	Hole [mm]
Frame	IP class	3x380-480 V	A	A incl. Decoupling plate	A	B	b	C	D

H8	IP20	90	24 ²	24 ²	-	0.5	3	0.5

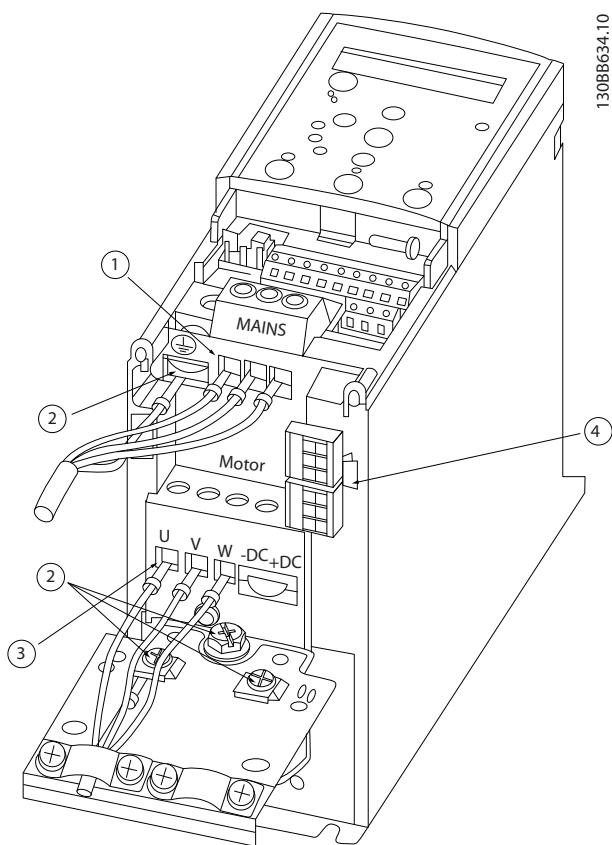

¹ Cable dimensions ≤95 mm²

² Cable dimensions >95 mm²

1.3.5 Connecting to Mains and Motor

The frequency converter is designed to operate all standard three-phased asynchronous motors. For maximum cross-section on wires please see *1.8.1 Mains Supply 3x380-480 V AC*.

- Use a shielded/armored motor cable to comply with EMC emission specifications, and connect this cable to both the decoupling plate and the motor metal.
 - Keep motor cable as short as possible to reduce the noise level and leakage currents.
 - For further details on mounting of the decoupling plate, please see instruction MI02QXYY.
 - Also see *EMC-Correct Installation in the Design Guide, MG18CXYY*.
1. Mount the earth wires to earth terminal.
 2. Connect motor to terminals U, V and W.
 3. Mount mains supply to terminals L1, L2 and L3 and tighten.

1.3.6 Fuses

Branch circuit protection

In order to protect the installation against electrical and fire hazard, all branch circuits in an installation, switch gear, machines etc., must be short-circuit and overcurrent protected according to national/international regulations.

Short circuit protection

Danfoss recommends using the fuses mentioned in the following tables to protect service personnel or other equipment in case of an internal failure in the unit or short-circuit on DC-link. The frequency converter provides full short circuit protection in case of a short-circuit on the motor.

Overcurrent protection

Provide overload protection to avoid overheating of the cables in the installation. Overcurrent protection must always be carried out according to national regulations. Fuses must be designed for protection in a circuit capable of supplying a maximum of 100,000 A_{rms} (symmetrical), 480 V maximum.

Non UL compliance

If UL/cUL is not to be complied with, use the fuses mentioned in *Table 1.2*, which will ensure compliance with IEC 61800-5-1:

In case of malfunction, not following the fuse recommendation may result in damage to the frequency converter.

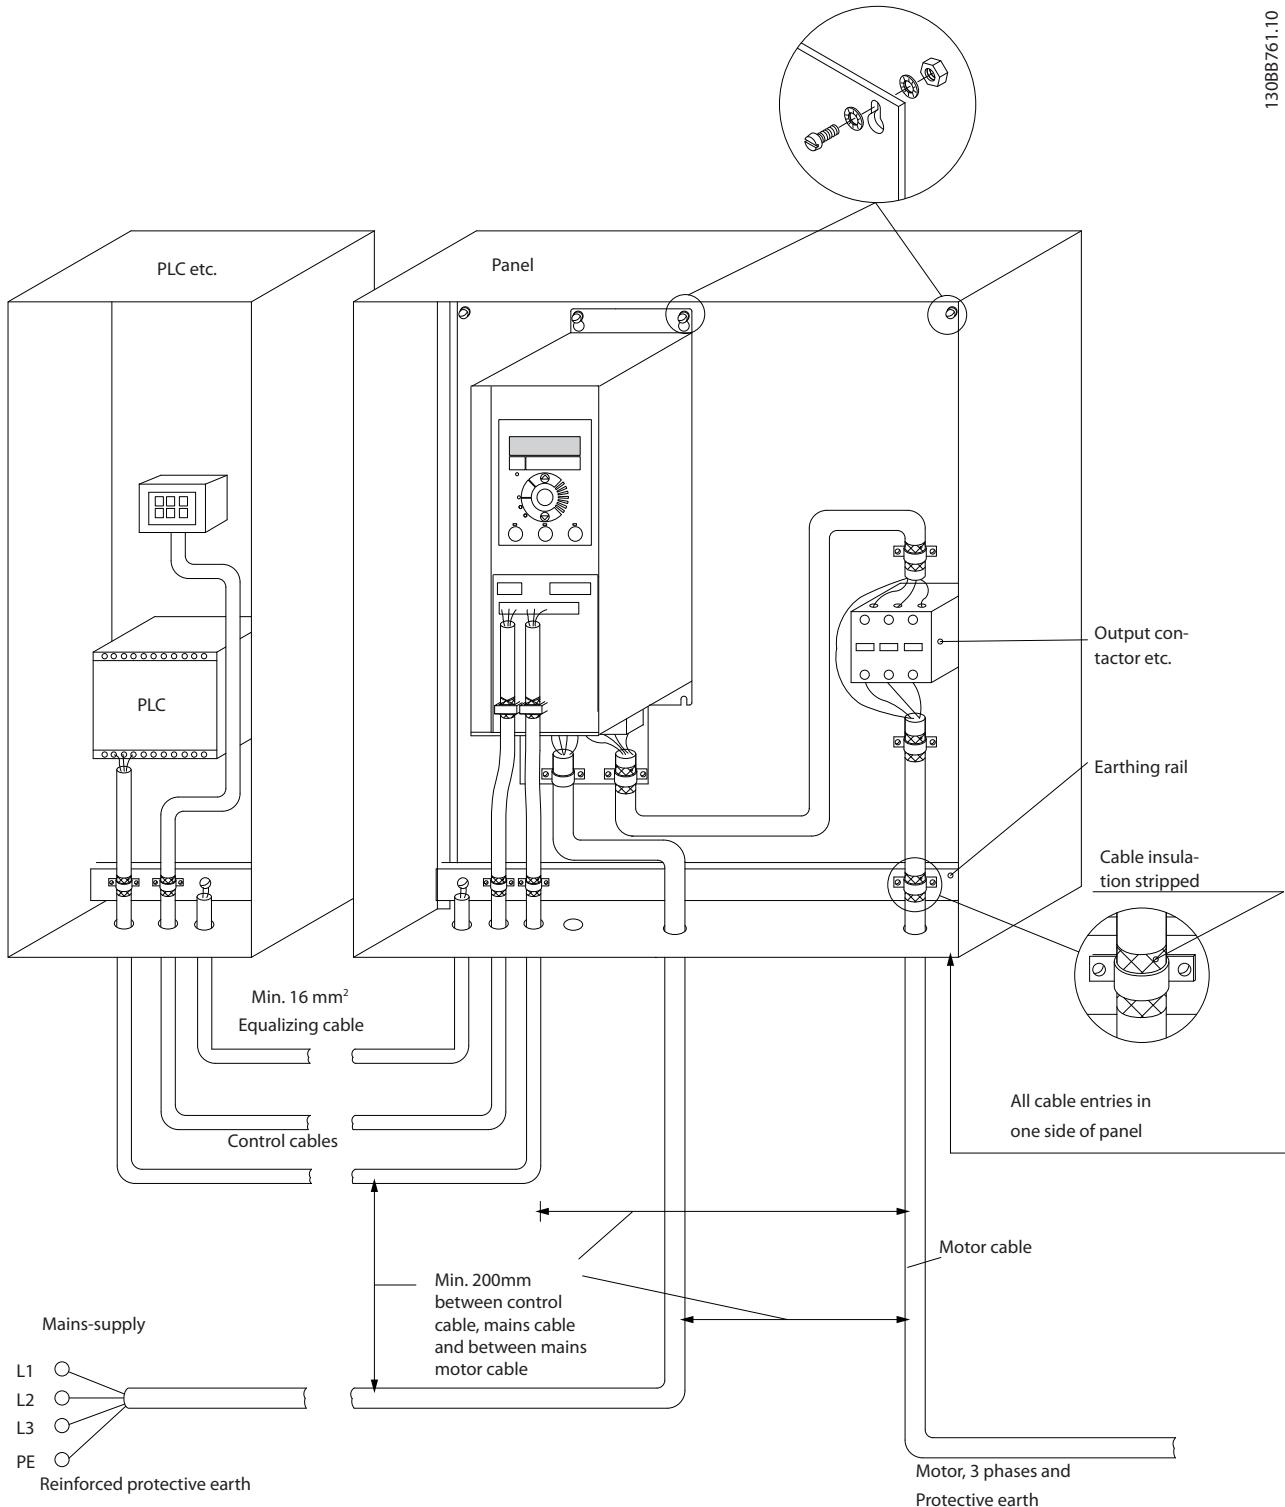

UL					Non UL
	Bussmann	Bussmann	Bussmann	Bussmann	Max. Fuse
Power [kW]	Type RK5	Type RK1	Type J	Type T	Type gG
3x380-480 V					
0.37	FRS-R-10	KTS-R10	JKS-10	JJS-10	10
0.75	FRS-R-10	KTS-R10	JKS-10	JJS-10	10
1.5	FRS-R-10	KTS-R10	JKS-10	JJS-10	10

90	FRS-R-250	KTS-R250	JKS-R250	JJS-R250	250

Table 1.2 Recommended fuses

1.3.7 EMC-Correct Electrical Installation

General points to be observed to ensure EMC-correct electrical installation.

- Use only screened/armoured motor cables and screened/armoured control cables.
- Connect the screen to earth at both ends.
- Avoid installation with twisted screen ends (pigtails), since this ruins the screening effect at high frequencies. Use the cable clamps provided instead.
- It is important to ensure good electrical contact from the installation plate through the installation screws to the metal cabinet of the frequency converter.
- Use starwashers and galvanically conductive installation plates.
- Do not use unscreened/unarmoured motor cables in the installation cabinets.

**Illustration 1.3 EMC-correct Electrical Installation**

For North America use metal conduits instead of shielded cables.

1.3.8 Control Terminals

IP20 380-480 V 0.37-22 kW:

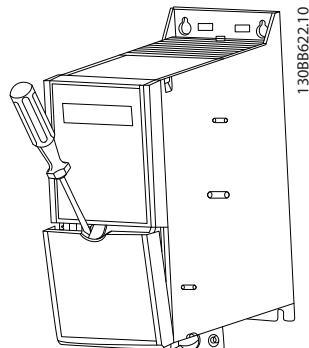

Illustration 1.4 Location of Control Terminals

Control terminals:

Illustration 1.5 shows all control terminals of the frequency converter. Applying Start (term. 18), connection between terminal 12-27 and an analog reference (term. 53 or 54 and 55) make the frequency converter run.

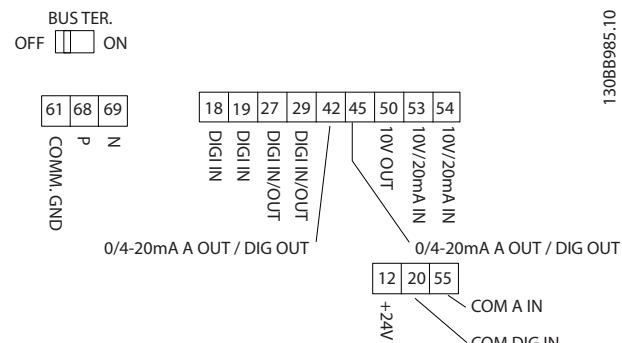

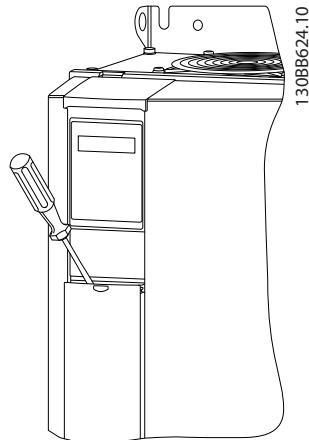

Illustration 1.5 Control Terminals

1. Place a screwdriver behind the terminal cover to activate snap.
2. Tilt the screwdriver outwards to open the cover.

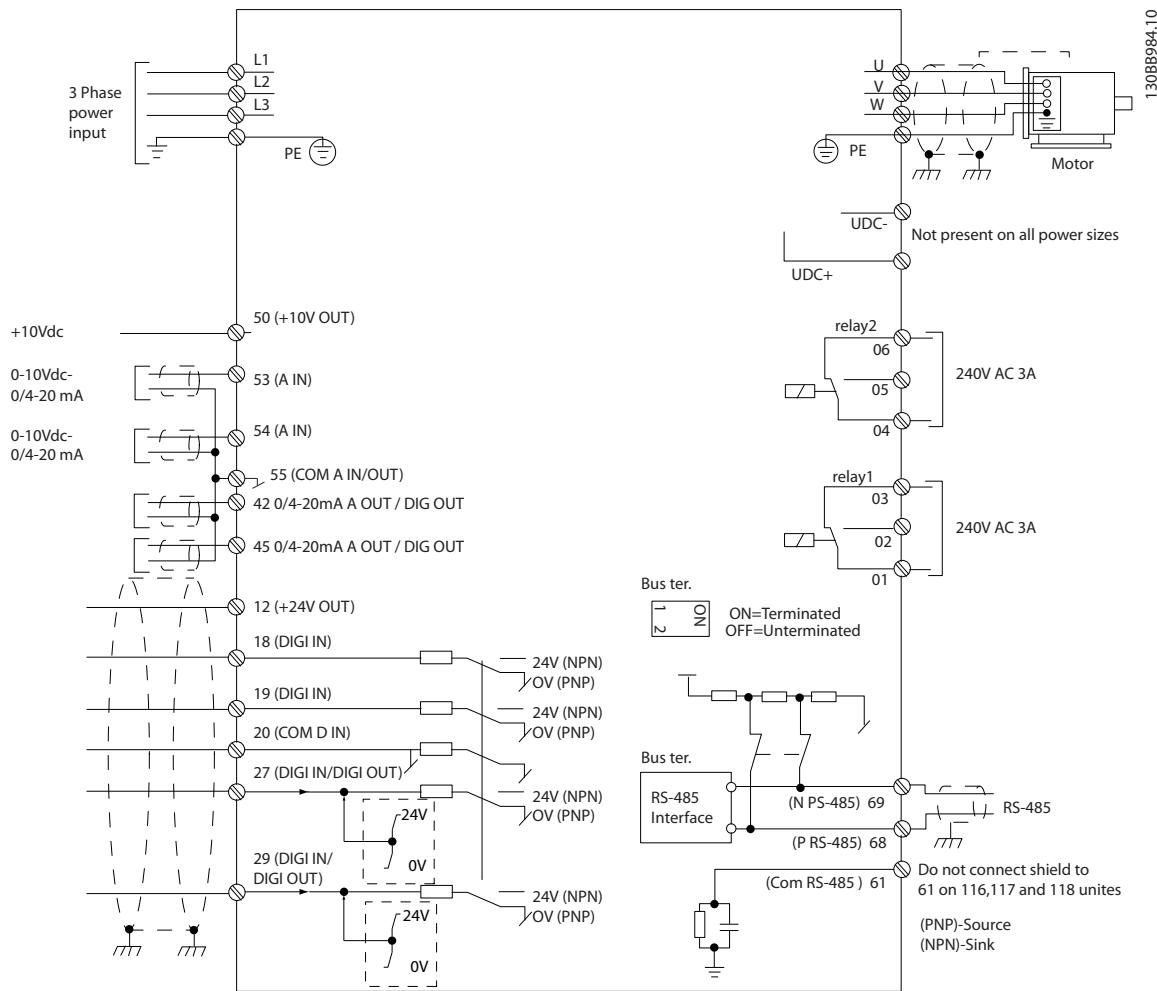

IP20 380-480 V 30-90 kW:

1. Place a screwdriver behind the terminal cover to activate snap.
2. Tilt the screwdriver outwards to open the cover.

Digital input 18, 19 and 27 mode is set in *5-00 Digital Input Mode* (PNP is default value) and digital input 29 mode is set in *5-03 Digital Input 29 Mode* (PNP is default value).

1.3.9 Electrical Overview

NOTE

There is no access to UDC- and UDC+ on the following units:

IP20 380-480 V 30-90 kW

1.4 Programming

1.4.1 Programming with the Local Control Panel (LCP)

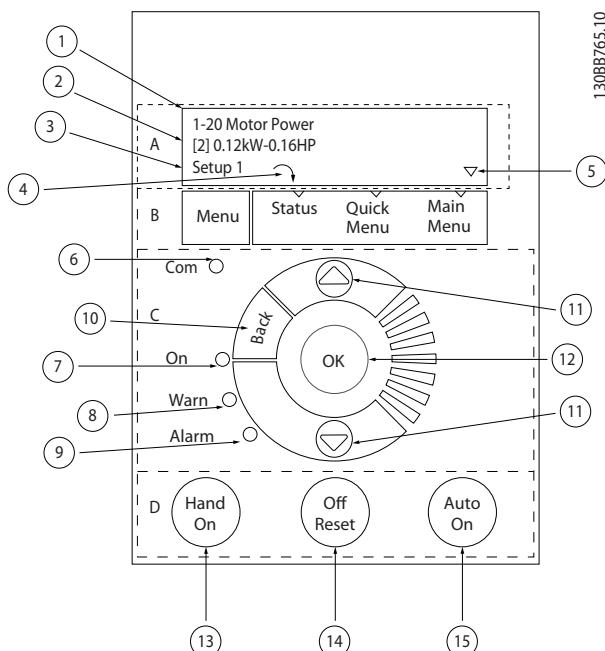

NOTE

The frequency converter can also be programmed from a PC via RS-485 com-port by installing the MCT 10 Set-up Software. This software can either be ordered using code number 130B1000 or downloaded from the Danfoss Web site: www.danfoss.com/BusinessAreas/DrivesSolutions/softwaredownload

1.4.2 Local Control Panel (LCP)

The following instructions are valid for the FC 111 LCP. The LCP is divided into four functional sections.

- A. Alphanumeric display
- B. Menu key
- C. Navigation keys and indicator lights (LEDs)
- D. Operation keys and indicator lights (LEDs)

A. Alpha Numeric Display

The LCD-display is back-lit with 2 alpha-numeric lines. All data is displayed on the LCP.

A number of information can be read from the display.

1	Parameter number and name.
2	Parameter value.
3	Set-up number shows the active set-up and the edit set-up. If the same set-up acts as both active and edit set-up, only that set-up number is shown (factory setting). When active and edit set-up differ, both numbers are shown in the display (Setup 12). The number flashing, indicates the edit set-up.
4	Motor direction is shown to the bottom left of the display – indicated by a small arrow pointing either clockwise or counterclockwise.
5	The triangle indicates if the LCP is in status, quick menu or main menu.

B. Menu Key

Use the menu key to select between status, quick menu or main menu.

C. Navigation keys and indicator lights (LEDs)

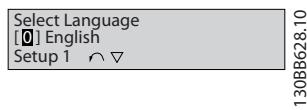

6	Com led: Flashes when bus communication is communicating.
7	Green LED/On: Control section is working.
8	Yellow LED/Warn.: Indicates a warning.
9	Flashing Red LED/Alarm: Indicates an alarm.
10	[Back]: For moving to the previous step or layer in the navigation structure
11	Arrows [▲] [▼]: For maneuvering between parameter groups, parameters and within parameters. Can also be used for setting local reference.
12	[OK]: For selecting a parameter and for accepting changes to parameter settings

D. Operation keys and indicator lights (LEDs)

13	[Hand On]: Starts the motor and enables control of the frequency converter via the LCP.
	NOTE
	Terminal 27 Digital Input (5-12 Terminal 27 Digital Input) has coast inverse as default setting. This means that [Hand On] will not start the motor if there is no 24 V to terminal 27. Connect terminal 12 to terminal 27.
14	[Off/Reset]: Stops the motor (off). If in alarm mode the alarm will be reset.
15	[Auto On]: frequency converter is controlled either via control terminals or serial communication.

At power-up

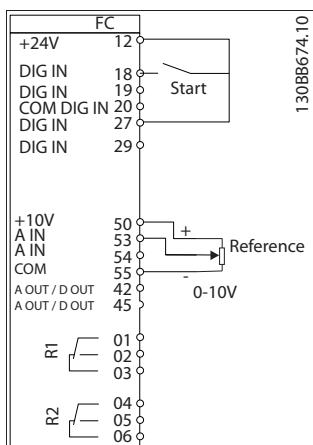

At the first power-up the user is asked to choose preferred language. Once selected this screen will never be shown again in the following powerups, but language can still be changed in *0-01 Language*.

130BB628.10

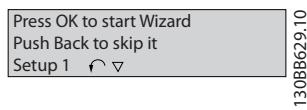

1.4.3 The Start-up Wizard for Open Loop Applications

The built-in “wizard” menu guides the installer through the setup of the frequency converter in a clear and structured manner to setup an open loop application. An open loop application is here an application with a start signal, analog reference (voltage or current) and optionally also relay signals (but no feed back signal from the process applied).

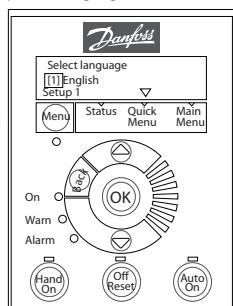

130BB674.10

The wizard will initially be shown after power up until any parameter has been changed. The wizard can always be accessed again through the quick menu. Press [OK] to start the wizard. If [Back] is pressed, the FC 111 will return to the status screen.

130BB629.10

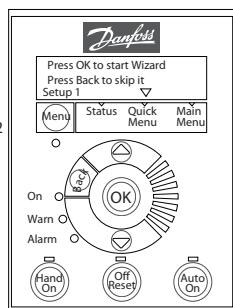

At power up the user is asked to choose the preferred language.

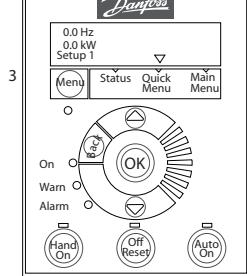

Power Up Screen

The next screen will be the Wizard screen.

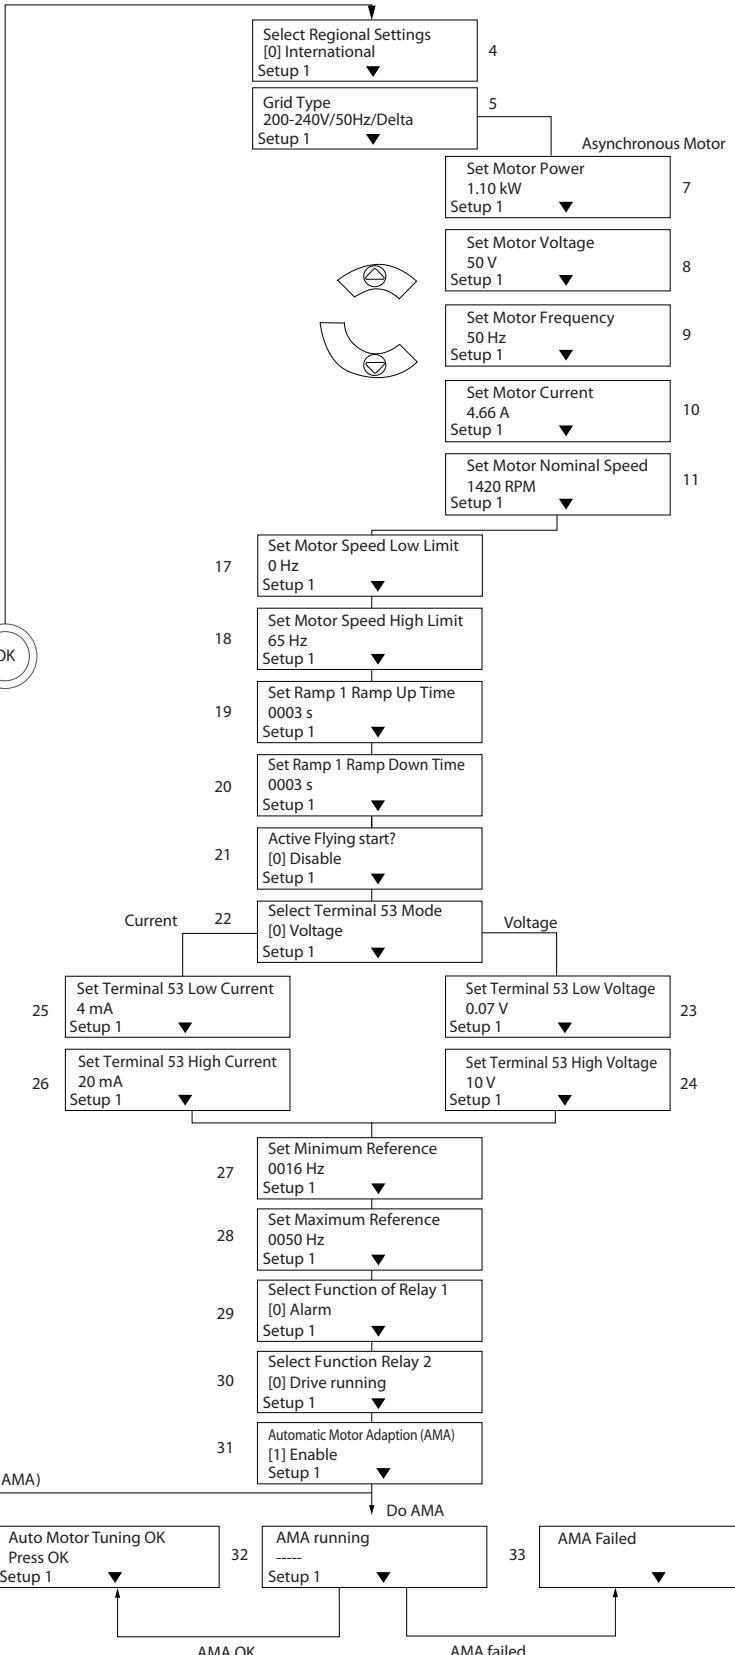

Wizard Screen

Status Screen

The Wizard can always be reentered via the Quick Menu!

- the HVAC FC 101 Wizard starts

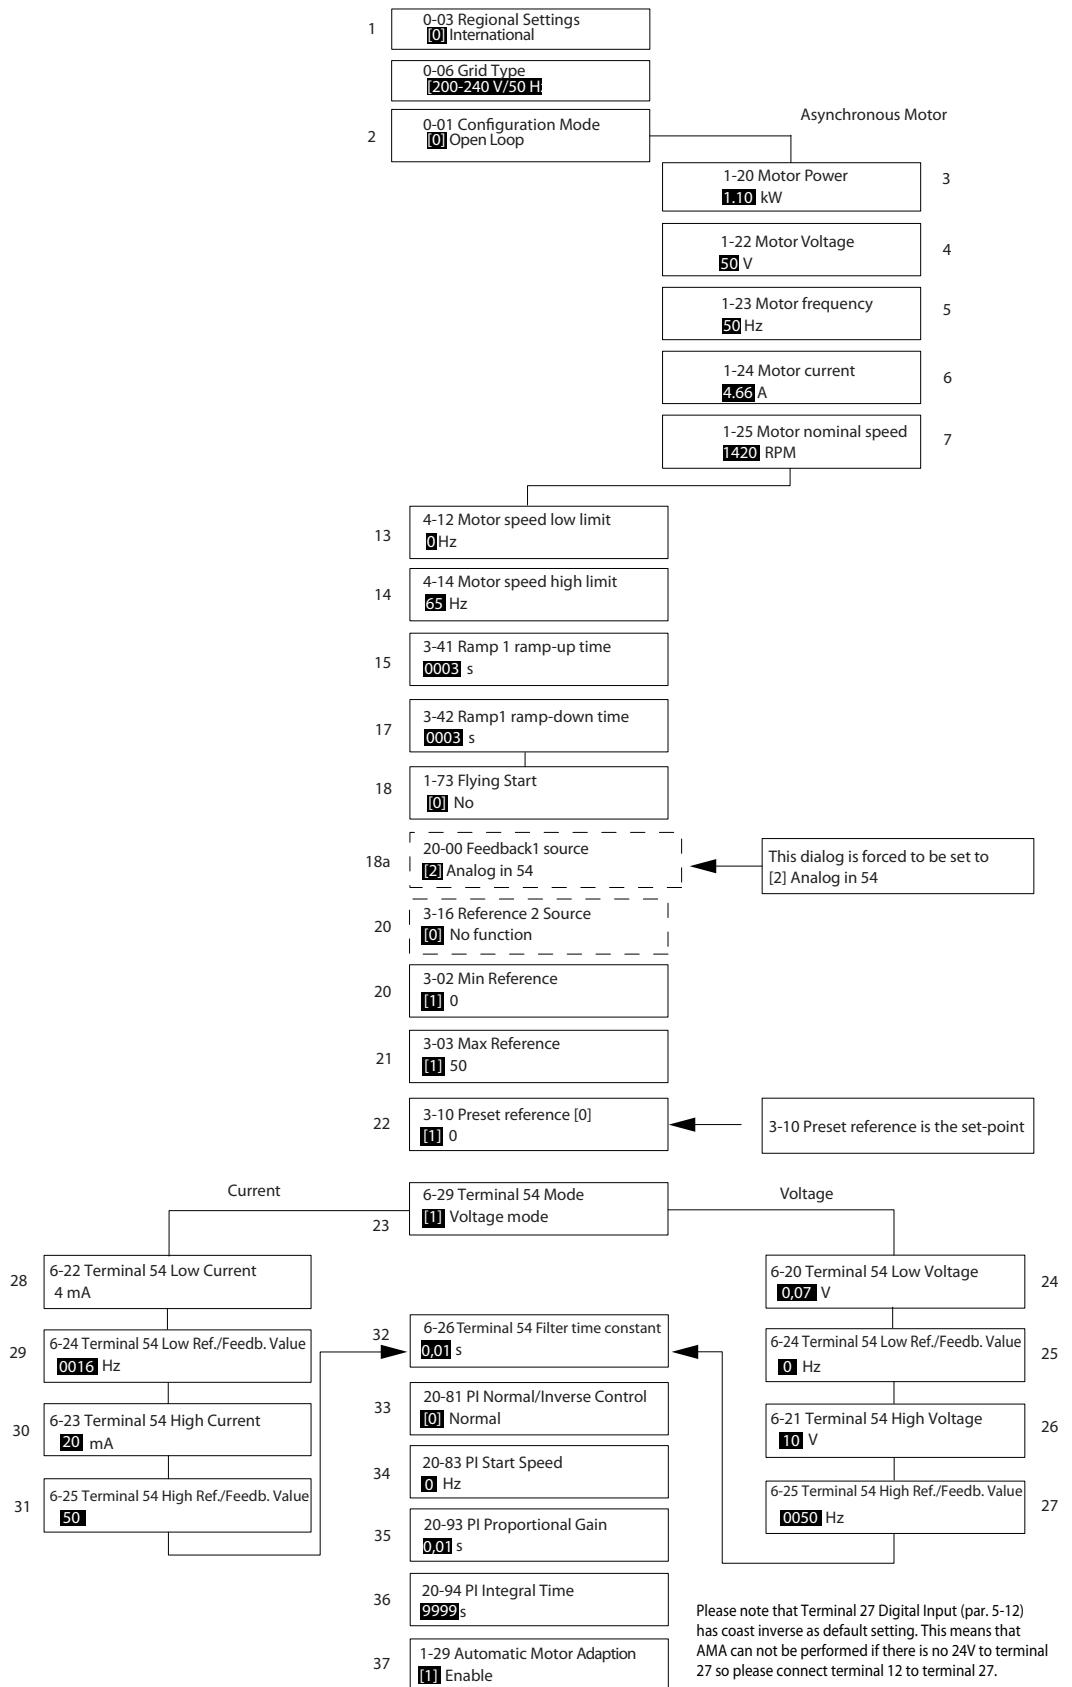

The FC 111 Start-up Wizard for Open Loop Applications

6-23 Terminal 54 High Current	0-20 mA	20	Enter the current that corresponds to the high reference value
6-24 Terminal 54 Low Ref./Feedb. Value	-4999-4999	0	Enter the feedback value that corresponds to the voltage or current set in 6-20 Terminal 54 Low Voltage/6-22 Terminal 54 Low Current
6-25 Terminal 54 High Ref./Feedb. Value	-4999-4999	50	Enter the feedback value that corresponds to the voltage or current set in 6-21 Terminal 54 High Voltage/6-23 Terminal 54 High Current
6-26 Terminal 54 Filter Time Constant	0-10 s	0.01	Enter the filter time constant
1-23 Motor Frequency	[0] Normal [1] Inverse	0	Select <i>Normal</i> [0] to set the process control to increase the output speed when the process error is positive. Select <i>Inverse</i> [1] to reduce the output speed.
20-83 PI Start Speed [Hz]	0-200 Hz	0	Enter the motor speed to be attained as a start signal for commencement of PI control
20-93 PI Proportional Gain	0-10	0.01	Enter the process controller proportional gain. Quick control is obtained at high amplification. However if amplification is too great, the process may become unstable

No & Name	Range	Default	Function
20-94 PI Integral Time	0.1-999.0 s	999.0 s	Enter the process controller integral time. Obtain quick control through a short integral time, though if the integral time is too short, the process becomes unstable. An excessively long integral time disables the integral action.
1-29 Automatic Motor Adaption (AMA)		Off	Performing an optimizes motor performance

Motor Set-up

The Quick Menu Motor Set-up guides through the needed motor parameters.

No & Name	Range	Default	Function
0-03 Regional Settings	[0] Interna-tional [1] US	0	
0-06 GridType	[0]-[132] please see start-up wizard for open loop application	Size selected	Select operating mode for restart upon reconnection of the frequency converter to mains voltage after power down
1-20 Motor Power	0.12-110 kW/ 0.16-150 Hp	Size related	Enter motor power from nameplate data
1-22 Motor Voltage	50.0-1000.0 V	Size related	Enter motor voltage from nameplate data
1-23 Motor Frequency	20.0-400.0 Hz	Size related	Enter motor frequency from nameplate data
1-24 Motor Current	0.01-10000.00 A	Size related	Enter motor current from nameplate data
1-25 Motor Nominal Speed	100.0-9999.0 RPM	Size related	Enter motor nominal speed from nameplate data
4-12 Motor Speed Low Limit [Hz]	0.0-400 Hz	0.0 Hz	Enter the minimum limit for low speed
4-14 Motor Speed High Limit [Hz]	0-400 Hz	65	Enter the maximum limit for high speed
3-41 Ramp 1 Ramp up Time	0.05-3600.0 s	Size related	Ramp up time from 0 to rated motor frequency <i>1-23 Motor Frequency</i>

No & Name	Range	Default	Function
3-42 Ramp 1 Ramp Down Time	0.05-3600.0 s	Size related	Ramp down time from rated motor frequency <i>1-23 Motor Frequency</i> to 0
1-73 Flying Start	[0] Disabled [1] Enabled	0	Select [1] Enable to enable the frequency converter to catch a spinning motor

Changes Made

Changes Made lists all parameters changed since factory setting. Only the changed parameters in current edit-setup are listed in changes made.

If the parameters value is changed back to factory setting's value from another different value, the parameter will NOT be listed in Changes Made.

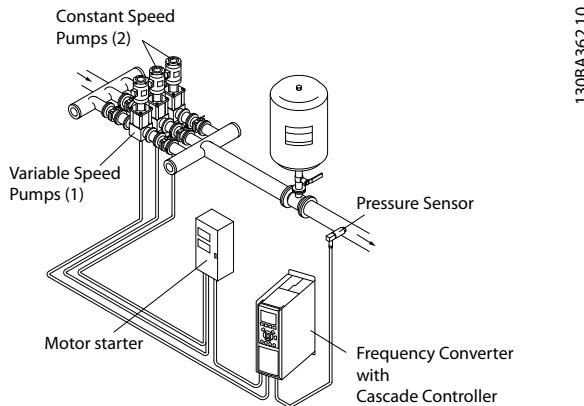

1. Press [Menu] key to enter the Quick Menu until indicator in display is placed above Quick Menu.
2. Press [Δ] [∇] to select either FC 111 wizard, closed loop setup, motor setup or changes made, then press [OK].
3. Press [Δ] [∇] to browse through the parameters in the Quick Menu.
4. Press [OK] to select a parameter.
5. Press [Δ] [∇] to change the value of a parameter setting.
6. Press [OK] to accept the change.
7. Press either [Back] twice to enter "Status", or press [Menu] once to enter "Main Menu".

The Main Menu accesses all parameters.

1. Press [Menu] key until indicator in display is placed above "Main Menu".
2. Press [Δ] [∇] to browse through the parameter groups.
3. Press [OK] to select a parameter group.
4. Press [Δ] [∇] to browse through the parameters in the specific group.

5. Press [OK] to select the parameter.
6. Press [Δ] [∇] to set/change the parameter value.

1.5 Cascade Controller

The Cascade Controller is used for pump applications where a certain pressure ("head") or level needs to be maintained over a wide dynamic range. Running a large pump at variable speed over a wide range is not an ideal solution because of low pump efficiency and because there is a practical limit of about 25% rated full load speed for running a pump.

In the Cascade Controller the frequency converter controls a variable speed motor as the variable speed pump (lead) and can stage up to two additional constant speed pumps on and off. By varying the speed of the initial pump, variable speed control of the entire system is provided. This maintains constant pressure while eliminating pressure surges, resulting in reduced system stress and quieter operation in pumping systems.

Fixed Lead Pump

The motors must be of equal size. The Cascade Controller allows the frequency converter to control up to 5 equal size pumps using the drives two built-in relays and terminal 27, 29 (DI/DO). When the variable pump (lead) is connected directly to the frequency converter, the other 4 pumps are controlled by the two built-in relays and terminal 27, 29 (DI/DO). Lead pump alternation can not be chosen when lead pump is fixed.

Lead Pump Alternation

The motors must be of equal size. This function makes it possible to cycle the frequency converter between the pumps in the system (when 25-57 Relays per Pump =1, maximum pump is 4. When 25-57 Relays per Pump =2, maximum pump is 3). In this operation the run time between pumps is equalized reducing the required pump maintenance and increasing reliability and lifetime of the system. The alternation of the lead pump can take place at a command signal or at staging (adding lag pump).

The command can be a manual alternation or an alternation event signal. If the alternation event is selected, the lead pump alternation takes place every time the event occurs. Selections include whenever an alternation timer expires, when the lead pump goes into sleep mode. Staging is determined by the actual system load.

25-55 Alternate if Load $\leq 50\% = 1$, if load $> 50\%$ Alternation will not happen. If load $\leq 50\%$ Alternation will happen. When 25-55 Alternate if Load $\leq 50\% = 0$, Alternation will happen no matter with Load. Total pump capacity is determined as lead pump plus lag speed pumps capacities.

Bandwidth Management

In cascade control systems, to avoid frequent switching of fixed speed pumps, the desired system pressure is kept within a bandwidth rather than at a constant level. The Staging Bandwidth provides the required bandwidth for operation. When a large and quick change in system pressure occurs, the Override Bandwidth overrides the Staging Bandwidth to prevent immediate response to a short duration pressure change. An Override Bandwidth Timer can be programmed to prevent staging until the system pressure has stabilized and normal control established.

When the Cascade Controller is enabled and running normally and the frequency converter issues a trip alarm, the system head is maintained by staging and destaging fixed speed pumps. To prevent frequent staging and destaging and minimize pressure fluxuations, a wider Fixed Speed Bandwidth is used instead of the Staging bandwidth.

1.5.1 System Status and Operation

Only when lead pump is working, the frequency converter can go into sleep mode. When the Cascade Controller is enabled, the operation status for each pump and the Cascade Controller is displayed by 25-81, *Pump Status* and 25-80, *Cascade Status* on the LCP. Cascade Controller information displayed includes:

- **Pumps Status**, is a read out of the status for the relays assigned to each pump. The display shows pumps that are disabled, off, running on the frequency converter or running on the mains/motor starter.
- **Cascade Status**, is a read out of the status for the Cascade Controller. The display shows the Cascade Controller is disabled, all pumps are running off, fixed speed pumps are being staged/de-staged and lead pump alternation is occurring.

1.5.2 Start/Stop Conditions

Commands assigned to digital inputs. See *Digital Inputs*, parameter group 5-1*.

	Variable speed pump (lead)	Fixed speed pumps (lag)
Start (SYSTEM START/STOP)	Ramps up (if stopped and there is a demand)	Staging (if stopped and there is a demand)
Lead Pump Start	Ramps up if SYSTEM START is active	Not affected
Coast (EMERGENCY STOP)	Coast to stop	Cut out (correspond relays, terminal 27/29 and 42/45)
External Interlock	Coast to stop	Cut out (built-in relays are de-energized)

Function of buttons on LCP:

	Variable speed pump (lead)	Fixed speed pumps (lag)
[Hand On]	Ramps up (if stopped by a normal stop command) or stays in operation if already running	Destaging (if running)
[Off]	Ramps down	Destaging
[Auto On]	Starts and stops according to commands via terminals or serial bus cascade controller only can work when drive in "Auto ON" mode	Staging/Destaging

1.7 Warnings and Alarms

Fault number	Alarm/Warning Bit Number	Fault text	Warning	Alarm	Trip locked	Cause of problem
2	16	Live zero error	X	X		Signal on terminal 53 or 54 is less than 50% of value set in 6-10 Terminal 53 Low Voltage, 6-12 Terminal 53 Low Current, 6-20 Terminal 54 Low Voltage or 6-22 Terminal 54 Low Current. See also parameter group 6-0*
4	14	Mains ph. loss	X	X	X	Missing phase on supply side or too high voltage imbalance. Check supply voltage. See 14-12 Function at Mains Imbalance
7	11	DC over volt	X	X		Intermediate circuit voltage exceeds limit.
8	10	DC under volt	X	X		Intermediate circuit voltage drops below "voltage warning low" limit.
9	9	Inverter overload	X	X		More than 100% load for too long.
10	8	Motor ETR over	X	X		Motor is too hot due to more than 100% load for too long. See 1-90 Motor Thermal Protection
11	7	Motor th over	X	X		Thermistor or thermistor connection is disconnected. See 1-90 Motor Thermal Protection
13	5	Over Current	X	X	X	Inverter peak current limit is exceeded.
14	2	Earth Fault		X	X	Discharge from output phases to ground.
16	12	Short Circuit		X	X	Short-circuit in motor or on motor terminals.
17	4	Ctrl.word TO	X	X		No communication to frequency converter. See parameter group 8-0*
24	50	Fan Fault	X	X		The fan is not working (Only on 400 V 30-90 kW units).
30	19	U phase loss		X	X	Motor phase U is missing. Check the phase. See 4-58 Missing Motor Phase Function.
31	20	V phase loss		X	X	Motor phase V is missing. Check the phase. See 4-58 Missing Motor Phase Function.
32	21	W phase loss		X	X	Motor phase W is missing. Check the phase. See 4-58 Missing Motor Phase Function.
38	17	Internal fault		X	X	Contact your local Danfoss supplier.
40	10	Overload on Terminal 27, Digital Output	X			Overload on Terminal 27, Digital Output
41	11	Overload on Terminal 29, Digital Output	X			Overload on Terminal 29, Digital Output
44	28	Earth Fault		X	X	Discharge from output phases to ground.
47	23	Control Voltage Fault	X	X	X	24 V DC may be overloaded.
48	25	VDD1 Supply Low		X	X	Control voltage low. Please contact your local Danfoss supplier
50		AMA Calibration failed		X		Contact your local Danfoss supplier.
51	15	AMA Unom,Inom		X		The setting of motor voltage, motor current and motor power is presumably wrong. Check the settings.
52		AMA low Inom		X		The motor current is too low. Check the settings.
53		AMA big motor		X		The motor is too big for the AMA to be carried out
54		AMA small mot		X		The motor is too small for the AMA to be carried out

Fault number	Alarm/Warning Bit Number	Fault text	Warning	Alarm	Trip locked	Cause of problem
55		AMA par. range		X		The parameter values found from the motor are outside acceptable range
56		AMA user interrupt		X		The AMA has been interrupted by the user
57		AMA timeout		X		Try to start the AMA again a number of times, until the AMA is carried out. Please note that repeated runs may heat the motor to a level where the resistance Rs and Rr are increased. In most cases, however, this is not critical
58		AMA internal	X	X		Contact your local Danfoss supplier.
59	25	Current limit	X			The current is higher than the value in 4-18 Current Limit
60	44	External Interlock		X		External interlock has been activated. To resume normal operation, apply 24 V DC to the terminal programmed for external interlock and reset the frequency converter (via serial communication, digital I/O, or by pressing reset button on keypad).
66	26	Heat sink Temperature Low	X			This warning is based on the temperature sensor in the IGBT module (Only on 400 V 30-90 kW units).
69	1	Pwr. Card Temp	X	X	X	The temperature sensor on the power card is either too hot or too cold.
79		Illegal power section configuration	X	X		Internal fault. Contact your local Danfoss supplier.
80	29	Drive initialised		X		All parameter settings are initialized to default settings.
87	47	Auto DC Braking	X			The drive is auto DC braking
95	40	Broken Belt	X	X		Torque is below the torque level set for no load, indicating a broken belt. See parameter group 22-6*.
200		Fire Mode	X			Fire mode has been activated
202		Fire Mode Limits Exceeded	X			Fire Mode has suppressed one or more warranty voiding alarms
250		New sparepart		X	X	The power or switch mode power supply has been exchanged. (Only on 400 V 30-90 kW units). Contact your local Danfoss supplier
251		New Typecode		X	X	The frequency converter has a new type code (Only on 400 V 30-90 kW units). Contact your local Danfoss supplier.

1.8.1 Mains Supply 3x380-480 V AC

1.8.2 EMC Test Results

The following test results have been obtained using a system with a frequency converter, a screened control cable, a control box with potentiometer, as well as a motor screened cable.

RFI Filter Type	Conduct emission. Maximum shielded cable length				Radiated emission				
	Industrial environment		Housing, trades and light industries		Industrial environment		Housing, trades and light industries		
	EN 55011 Class A2	EN 55011 Class A1	EN 55011 Class B		EN 55011 Class A1		EN 55011 Class B		
	Without external filter	With external filter	Without external filter [m]	With external filter [m]	Without external filter [m]	With external filter [m]	Without external filter	With external filter	Without external filter
H4 RFI filter (Class A1)									
0.37-22 kW 3x380-480 V IP20			25	50		20	Yes	Yes	-
H3 RFI filter (Class A1/B)									
30-90 kW 3x380-480 V IP20			50		20		Yes	-	

Protection and features

- Electronic thermal motor protection against overload.
- Temperature monitoring of the heatsink ensures that the frequency converter trips in case of overtemperature.
- The frequency converter is protected against short-circuits between motor terminals U, V, W.
- If a motor phase is missing, the frequency converter trips and issues an alarm.
- If a mains phase is missing, the frequency converter trips or issues a warning (depending on the load).
- Monitoring of the intermediate circuit voltage ensures that the frequency converter trips if the intermediate circuit voltage is too low or too high.
- The frequency converter is protected against earth faults on motor terminals U, V, W.

Mains supply (L1, L2, L3)

Supply voltage	380-480 V ±10%
Supply frequency	50/60 Hz
Max. imbalance temporary between mains phases	3.0% of rated supply voltage
True Power Factor (λ)	≥0.9 nominal at rated load
Displacement Power Factor ($\cos\phi$) near unity	(>0.98)
Switching on the input supply L1, L2, L3 (power-ups) enclosure frame H1-H5	Max. 2 times/min.
Switching on the input supply L1, L2, L3 (power-ups) enclosure frame H6-H8	Max. 1 time/min.
Environment according to EN 60664-1	overvoltage category III/pollution degree 2
The unit is suitable for use on a circuit capable of delivering not more than 100.000 RMS symmetrical Amperes, 240/480 V maximum.	

Motor output (U, V, W)

Output voltage	0-100% of supply voltage
Output frequency	0-200 Hz (VVC ^{plus}), 0-400 Hz (u/f)
Switching on output	Unlimited
Ramp times	0.05-3600 s

Cable lengths and cross sections

Max. motor cable length, screened/armoured (EMC correct installation)	See 1.8.2 EMC Test Results
Max. motor cable length, unscreened/unarmoured	50 m
Max. cross section to motor, mains*	
Cross section DC terminals for filter feedback on enclosure frame H1-H3, I2, I3	4 mm ² /11 AWG
Cross section DC terminals for filter feedback on enclosure frame H4-H5	16 mm ² /6 AWG
Maximum cross section to control terminals, rigid wire	2.5 mm ² /14 AWG
Maximum cross section to control terminals, flexible cable	2.5 mm ² /14 AWG
Minimum cross section to control terminals	0.05 mm ² /30 AWG

*See 1.8.1 Mains Supply 3x380-480 V AC for more information

Digital inputs:

Programmable digital inputs	4
Terminal number	18, 19, 27, 29
Logic	PNP or NPN
Voltage level	0-24 V DC
Voltage level, logic '0' PNP	<5 V DC
Voltage level, logic '1' PNP	>10 V DC
Voltage level, logic '0' NPN	>19 V DC
Voltage level, logic '1' NPN	<14 V DC
Maximum voltage on input	28 V DC
Input resistance, R _i	Approx. 4 k
Digital input 29 as thermistor input	Fault: >2.9 kΩ and no fault: <800 Ω

Digital output

Programmable digital outputs	2
Terminal number	27, 29 ¹⁾
Voltage level at digital output	0-24 V DC
Max. output current (SINK or Source)	40 mA

1) Terminals 27 and 29 can also be programmed as digital inputs.

Analog inputs

Number of analog inputs	2
Terminal number	53, 54
Terminal 53 mode	Parameter 6-19: 1 = voltage, 0 = current
Terminal 54 mode	Parameter 6-29: 1 = voltage, 0= current
Voltage level	0-10 V
Input resistance, R _i	approx. 10 kΩ
Max. voltage	20 V
Current level	0/4 to 20 mA (scalable)
Input resistance, R _i	<500 Ω
Max. current	29 mA

Analog output

Number of programmable analog outputs	2
Terminal number	42, 45 ¹⁾
Current range at analog output	0/4-20 mA
Max. load to common at analog output	500 Ω
Max. voltage at analog output	17 V
Accuracy on analog output	Max. error: 0.4 % of full scale
Resolution on analog output	10 bit

1) Terminal 42 and 45 can also be programmed as digital outputs.

Digital output

Number of digital outputs	2
Terminal number	42, 45 ¹⁾
Voltage level at digital output (output current = 20 mA)	12 V DC
Max. Voltage level at digital output (output current < 4 mA)	17 V DC
Max. output current	20 mA

¹⁾ Terminals 42 and 45 can also be programmed as analog outputs.

Control card, RS-485 serial communication

Terminal number	68 (P, TX+, RX+), 69 (N, TX-, RX-)
Terminal number	61 Common for terminals 68 and 69

Control card, 24 V DC output

Terminal number	12
Max. load enclosure frame H1-H8, I2-I8	80 mA

Relay output

Programmable relay output	2
Relay 01 and 02	01-03 (NC), 01-02 (NO), 04-06 (NC), 04-05 (NO)
Max. terminal load (AC-1) ¹⁾ on 01-02/04-05 (NO) (Resistive load)	250 V AC, 3 A
Max. terminal load (AC-15) ¹⁾ on 01-02/04-05 (NO) (Inductive load @ cosφ 0.4)	250 V AC, 0.2 A
Max. terminal load (DC-1) ¹⁾ on 01-02/04-05 (NO) (Resistive load)	30 V DC, 2 A
Max. terminal load (DC-13) ¹⁾ on 01-02/04-05 (NO) (Inductive load)	24 V DC, 0.1 A
Max. terminal load (AC-1) ¹⁾ on 01-03/04-06 (NC) (Resistive load)	250 V AC, 3 A
Max. terminal load (AC-15) ¹⁾ on 01-03/04-06 (NC) (Inductive load @ cosφ 0.4)	250 V AC, 0.2 A
Max. terminal load (DC-1) ¹⁾ on 01-03/04-06 (NC) (Resistive load)	30 V DC, 2 A
(NC) (Resistive load)	Min. terminal load on 01-03 (NC), 01-02 (NO) 24 V DC 10 mA, 24 V AC 20 mA
Environment according to EN 60664-1	Overvoltage category III/pollution degree 2

1) IEC 60947 parts 4 and 5.

Control card, 10 V DC output

Terminal number	50
Output voltage	10.5 V ±0.5 V
Max. load	25 mA

All inputs, outputs, circuits, DC supplies and relay contacts are galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.

Surroundings

Enclosure	IP20
Enclosure kit available	IP21, TYPE 1
Vibration test	1.0 g
Max. relative humidity	5% - 95% (IEC 60721-3-3; Class 3K3 (non-condensing) during operation
Aggressive environment (IEC 60721-3-3), coated (standard) frame H1-H5	Class 3C3
Aggressive environment (IEC 60721-3-3), non-coated frame H6-H10	Class 3C2
Aggressive environment (IEC 60721-3-3), coated (optional) frame H6-H10	Class 3C3
Test method according to IEC 60068-2-43 H2S (10 days)	
Ambient temperature	See max. output current at 40/50° C in the tables mains supply

Derating for high ambient temperature, see 1.8 Special Conditions

Minimum ambient temperature during full-scale operation	0° C
Minimum ambient temperature at reduced performance, enclosure frame H1-H5	-20° C
Minimum ambient temperature at reduced performance, enclosure frame H6-H10	-10° C
Temperature during storage/transport	-30 - +65/70° C
Maximum altitude above sea level without derating	1000 m
Maximum altitude above sea level with derating	3000 m

Derating for high altitude, see 1.8 Special Conditions	
Safety standards	EN/IEC 61800-5-1, UL 508C
EMC standards, Emission	EN 61800-3, EN 61000-6-3/4, EN 55011, IEC 61800-3
EMC standards, Immunity	EN 61800-3, EN 61000-3-12, EN 61000-6-1/2, EN 61000-4-2, EN 61000-4-3, EN 61000-4-4, EN 61000-4-5, EN 61000-4-6

1.9 Special Conditions

1.9.1 Derating for Ambient Temperature and Switching Frequency

The ambient temperature measured over 24 hours should be at least 5°C lower than the max. ambient temperature. If the frequency converter is operated at high ambient temperature, the continuous output current should be decreased. For derating curve, see *Design Guide MG18C3YY*.

1.9.2 Derating for Low Air Pressure

The cooling capability of air is decreased at low air pressure. For altitudes above 2000 m, please contact Danfoss regarding PELV. Below 1000 m altitude no derating is necessary, but above 1000 m the ambient temperature or the maximum output current should be decreased. Decrease the output by 1% per 100 m altitude above 1000 m or reduce the max. ambient temperature by 1° per 200 m.
