1 Introduction

1.1 Software Version

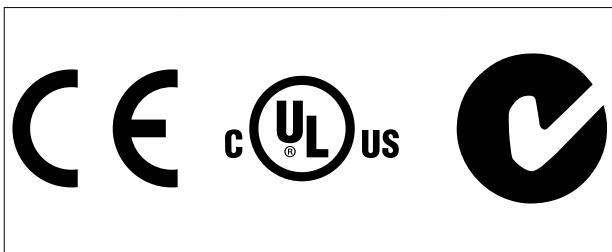

Programming Guide

Software versions: 7.4X, 48.0X

This programming guide can be used for all VLT® AutomationDrive FC 301/FC 302 frequency converters with software versions 7.4X and 48.0X.
The software version number can be read from parameter 15-43 Software Version.

Table 1.1 Software Version

1.2 Approvals

1.3 Definitions

1.3.1 Frequency Converter

$I_{VLT,MAX}$

Maximum output current.

$I_{VLT,N}$

Rated output current supplied by the frequency converter.

$U_{VLT,MAX}$

Maximum output voltage.

1.3.2 Input

Control command

Start and stop the connected motor with LCP and digital inputs.

Functions are divided into 2 groups.

Functions in group 1 have higher priority than functions in group 2.

| | |
|---------|--|
| Group 1 | Reset, coast stop, reset, and coast stop, quick stop, DC brake, stop, the [OFF] key. |
| Group 2 | Start, pulse start, reversing, start reversing, jog, freeze output. |

1.3.3 Motor

Motor running

Torque generated on output shaft and speed from 0 RPM to maximum speed on motor.

f_{JOG}

Motor frequency when the jog function is activated (via digital terminals).

f_M

Motor frequency.

f_{MAX}

Maximum motor frequency.

f_{MIN}

Minimum motor frequency.

$f_{M,N}$

Rated motor frequency (nameplate data).

I_M

Motor current (actual).

$I_{M,N}$

Rated motor current (nameplate data).

$n_{M,N}$

Nominal motor speed (nameplate data).

n_s

Synchronous motor speed

$$n_s = \frac{2 \times par. 1 - 23 \times 60 s}{par. 1 - 39}$$

n_{slip}

Motor slip.

$P_{M,N}$

Rated motor power (nameplate data in kW or hp).

$T_{M,N}$

Rated torque (motor).

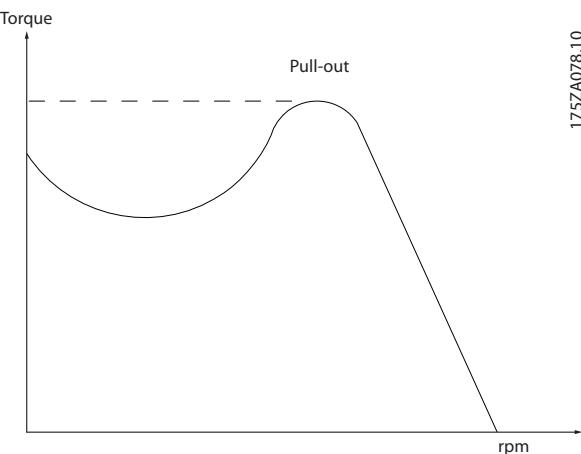

U_M

Instant motor voltage.

$U_{M,N}$

Rated motor voltage (nameplate data).

Table 1.2 Function Groups

Break-away torque

175ZA078.10

Illustration 1.1 Break-away Torque**η_{VLT}**

The efficiency of the frequency converter is defined as the ratio between the power output and the power input.

Start-disable command

A stop command belonging to Group 1 control commands - see *Table 1.2*.

Stop command

A stop command belonging to Group 1 control commands - see *Table 1.2*.

1.3.4 References**Analog reference**

A signal transmitted to the analog inputs 53 or 54 (voltage or current).

Binary reference

A signal transmitted to the serial communication port.

Preset reference

A defined preset reference to be set from -100% to +100% of the reference range. Selection of 8 preset references via the digital terminals.

Pulse reference

A pulse frequency signal transmitted to the digital inputs (terminal 29 or 33).

Ref_{MAX}

Determines the relationship between the reference input at 100% full scale value (typically 10 V, 20 mA) and the resulting reference. The maximum reference value is set in *parameter 3-03 Maximum Reference*.

Ref_{MIN}

Determines the relationship between the reference input at 0% value (typically 0 V, 0 mA, 4 mA) and the resulting reference. The minimum reference value is set in *parameter 3-02 Minimum/Offset Reference*.

1.3.5 Miscellaneous**Analog inputs**

The analog inputs are used for controlling various functions of the frequency converter.

There are 2 types of analog inputs:

Current input, 0–20 mA, and 4–20 mA

Voltage input, -10 V DC to +10 V DC.

Analog outputs

The analog outputs can supply a signal of 0–20 mA, 4–20 mA.

Automatic motor adaptation, AMA

AMA algorithm determines the electrical parameters for the connected motor at standstill.

Brake resistor

The brake resistor is a module capable of absorbing the brake power generated in regenerative braking. This regenerative brake power increases the DC-link voltage and a brake chopper ensures that the power is transmitted to the brake resistor.

CT characteristics

Constant torque characteristics used for all applications such as conveyor belts, displacement pumps, and cranes.

Digital inputs

The digital inputs can be used for controlling various functions of the frequency converter.

Digital outputs

The frequency converter features 2 solid-state outputs that can supply a 24 V DC (maximum 40 mA) signal.

DSP

Digital signal processor.

ETR

Electronic thermal relay is a thermal load calculation based on present load and time. Its purpose is to estimate the motor temperature.

Hiperface®

Hiperface® is a registered trademark by Stegmann.

Initializing

If initializing is carried out (*parameter 14-22 Operation Mode*), the frequency converter returns to the default setting.

Intermittent duty cycle

An intermittent duty rating refers to a sequence of duty cycles. Each cycle consists of an on-load and an off-load period. The operation can be either periodic duty or non-periodic duty.

LCP

The local control panel makes up a complete interface for control and programming of the frequency converter. The control panel is detachable and can be installed up to 3 m from the frequency converter, that is, in a front panel with the installation kit option.

NLCP

Numerical local control panel interface for control and programming of the frequency converter. The display is numerical and the panel is used to show process values. The NLCP has no storage and copy functions.

lsb

Least significant bit.

msb

Most significant bit.

MCM

Short for mille circular mil, an American measuring unit for cable cross-section. 1 MCM=0.5067 mm².

Online/offline parameters

Changes to online parameters are activated immediately after the data value is changed. Press [OK] to activate changes to off-line parameters.

Process PID

The PID control maintains the desired speed, pressure, temperature, and so on, by adjusting the output frequency to match the varying load.

PCD

Process control data.

Power cycle

Switch off the mains until display (LCP) is dark – then turn power on again.

Pulse input/incremental encoder

An external, digital pulse transmitter used for feeding back information on motor speed. The encoder is used in applications where great accuracy in speed control is required.

RCD

Residual current device.

Set-up

Save parameter settings in 4 set-ups. Change between the 4 parameter set-ups and edit 1 set-up, while another set-up is active.

SFAVM

Switching pattern called stator flux-oriented asynchronous vector modulation (*parameter 14-00 Switching Pattern*).

Slip compensation

The frequency converter compensates for the motor slip by giving the frequency a supplement that follows the measured motor load keeping the motor speed almost constant.

SLC

The SLC (smart logic control) is a sequence of user-defined actions executed when the associated user-defined events are evaluated as true by the SLC. (See *chapter 3.14 Parameters: 13-** Smart Logic Control*).

STW

Status word.

FC standard bus

Includes RS485 bus with FC protocol or MC protocol. See *parameter 8-30 Protocol*.

THD

Total harmonic distortion states the total contribution of harmonic.

Thermistor

A temperature-dependent resistor placed on the frequency converter or the motor.

Trip

A state entered in fault situations, for example if the frequency converter is subject to an overtemperature or when the frequency converter is protecting the motor, process, or mechanism. The frequency converter prevents a restart until the cause of the fault has disappeared. To cancel the trip state, restart the frequency converter. Do not use the trip state for personal safety.

Trip lock

The frequency converter enters this state in fault situations to protect itself. The frequency converter requires physical intervention, for example when there is a short circuit on the output. A trip lock can only be canceled by disconnecting mains, removing the cause of the fault, and reconnecting the frequency converter. Restart is prevented until the trip state is canceled by activating reset or, sometimes, by being programmed to reset automatically. Do not use the trip lock state for personal safety.

VT characteristics

Variable torque characteristics used for pumps and fans.

VVC⁺

If compared with standard voltage/frequency ratio control, Voltage Vector Control (VVC⁺) improves the dynamics and the stability, both when the speed reference is changed and in relation to the load torque.

60° AVM

60° asynchronous vector modulation (*parameter 14-00 Switching Pattern*).

Power factor

The power factor is the relation between I₁ and I_{RMS}.

$$\text{Power factor} = \frac{\sqrt{3} \times U \times I_1 \cos\phi}{\sqrt{3} \times U \times I_{RMS}}$$

The power factor for 3-phase control:

$$\text{Power factor} = \frac{I_1 \times \cos\phi_1}{I_{RMS}} = \frac{I_1}{I_{RMS}} \text{ since } \cos\phi_1 = 1$$

The power factor indicates to which extent the frequency converter imposes a load on the mains supply.

The lower the power factor, the higher the I_{RMS} for the same kW performance.

$$I_{RMS} = \sqrt{I_1^2 + I_3^2 + I_5^2 + \dots + I_n^2}$$

In addition, a high-power factor indicates that the different harmonic currents are low.

The DC coils in the frequency converters produce a high-power factor, which minimizes the imposed load on the mains supply.

Target position

The final target position specified by positioning commands. The profile generator uses this position to calculate the speed profile.

Commanded position

The actual position reference calculated by the profile generator. The frequency converter uses the commanded position as setpoint for position PI.

Actual position

The actual position from an encoder, or a value that the motor control calculates in open loop. The frequency converter uses the actual position as feedback for position PI.

Position error

Position error is the difference between the actual position and the commanded position. The position error is the input for the position PI controller.

Position unit

The physical unit for position values.

1.4 Safety** WARNING****HIGH VOLTAGE**

Frequency converters contain high voltage when connected to AC mains input, DC supply, or load sharing. Failure to perform installation, start-up, and maintenance by qualified personnel can result in death or serious injury.

- Only qualified personnel must perform installation, start-up, and maintenance.

Safety regulations

- Disconnect mains supply to the frequency converter whenever repair work is to be carried out. Check that the mains supply has been disconnected and that the necessary time has elapsed before removing motor and mains supply plugs. For information about the discharge time, see *Table 1.3*.
- [Off] does not disconnect the mains supply and must not be used as a safety switch.
- Ground the equipment properly, protect the user against supply voltage, and protect the motor against overload in accordance with applicable national and local regulations.
- The ground leakage current exceeds 3.5 mA. Ensure correct grounding of the equipment by a certified electrical installer.
- Do not remove the plugs for the motor and mains supply while the frequency converter is connected to mains. Check that the mains supply has been disconnected and that the necessary

time has elapsed before removing motor and mains plugs.

- The frequency converter has more voltage sources than L1, L2, and L3, when load sharing (linking of DC intermediate circuit) or external 24 V DC is installed. Check that all voltage sources have been disconnected and that the necessary time has elapsed before commencing repair work. For information about the discharge time, see *Table 1.3*.

 WARNING**UNINTENDED START**

When the frequency converter is connected to AC mains, DC supply, or load sharing, the motor may start at any time. Unintended start during programming, service, or repair work can result in death, serious injury, or property damage. The motor can start via an external switch, a fieldbus command, an input reference signal from the LCP, or after a cleared fault condition.

To prevent unintended motor start:

- Disconnect the frequency converter from the mains.
- Press [Off/Reset] on the LCP before programming parameters.
- Completely wire and assemble the frequency converter, motor, and any driven equipment before connecting the frequency converter to AC mains, DC supply, or load sharing.

 WARNING**DISCHARGE TIME**

The frequency converter contains DC-link capacitors, which can remain charged even when the frequency converter is not powered. High voltage can be present even when the warning indicator lights are off. Failure to wait the specified time after power has been removed before performing service or repair work, could result in death or serious injury.

1. Stop the motor.
2. Disconnect AC mains, permanent magnet type motors, and remote DC-link supplies, including battery back-ups, UPS, and DC-link connections to other frequency converters.
3. Wait for the capacitors to discharge fully, before performing any service or repair work. The duration of waiting time is specified in *Table 1.3*.

| Voltage [V] | Minimum waiting time (minutes) | | |
|-------------|--------------------------------|-------------------------|--------------------------|
| | 4 | 7 | 15 |
| 200–240 | 0.25–3.7 kW (0.34–5 hp) | – | 5.5–37 kW (7.5–50 hp) |
| 380–500 | 0.25–7.5 kW (0.34–10 hp) | – | 11–75 kW (15–100 hp) |
| 525–600 | 0.75–7.5 kW (1–10 hp) | – | 11–75 kW (15–100 hp) |
| 525–690 | – | 1.5–7.5 kW (2–10 hp) | 11–75 kW (15–100 hp) |

Table 1.3 Discharge Time

NOTICE

When using the Safe Torque Off, always follow the instructions in *VLT® Frequency Converters - Safe Torque Off Operating Instructions*.

NOTICE

Control signals from, or internally within, the frequency converter may in rare cases be activated in error, be delayed, or fail to occur entirely. When used in situations where safety is critical, for example, when controlling the electromagnetic brake function of a hoist application, these control signals must not be relied on exclusively.

NOTICE

Hazardous situations must be identified by the machine builder/integrator who is responsible for considering the necessary preventive means. More monitoring and protective devices may be included, always according to valid national safety regulations, for example, law on mechanical tools and regulations for the prevention of accidents.

Crane, lifts, and hoists

The controlling of external brakes must always have a redundant system. The frequency converter can in no circumstances be the primary safety circuit. Comply with relevant standards, for example:

Hoists and cranes: IEC 60204-32

Lifts: EN 81

Protection mode

Once a hardware limit on motor current or DC-link voltage is exceeded, the frequency converter enters the protection mode. Protection mode means a change of the PWM modulation strategy and a low switching frequency to minimize losses. This continues for 10 s after the last fault and increases the reliability and the robustness of the frequency converter while re-establishing full control of the motor.

In hoist applications, protection mode is not usable because the frequency converter is unable to leave this mode again and therefore it extends the time before activating the brake, which is not recommended.

Protection mode can be disabled by setting parameter 14-26 *Trip Delay at Inverter Fault* to 0, which means that the frequency converter trips immediately if 1 of the hardware limits is exceeded.

NOTICE

Disabling protection mode in hoisting applications (parameter 14-26 *Trip Delay at Inverter Fault* = 0) is recommended.

1.5 Electrical Wiring

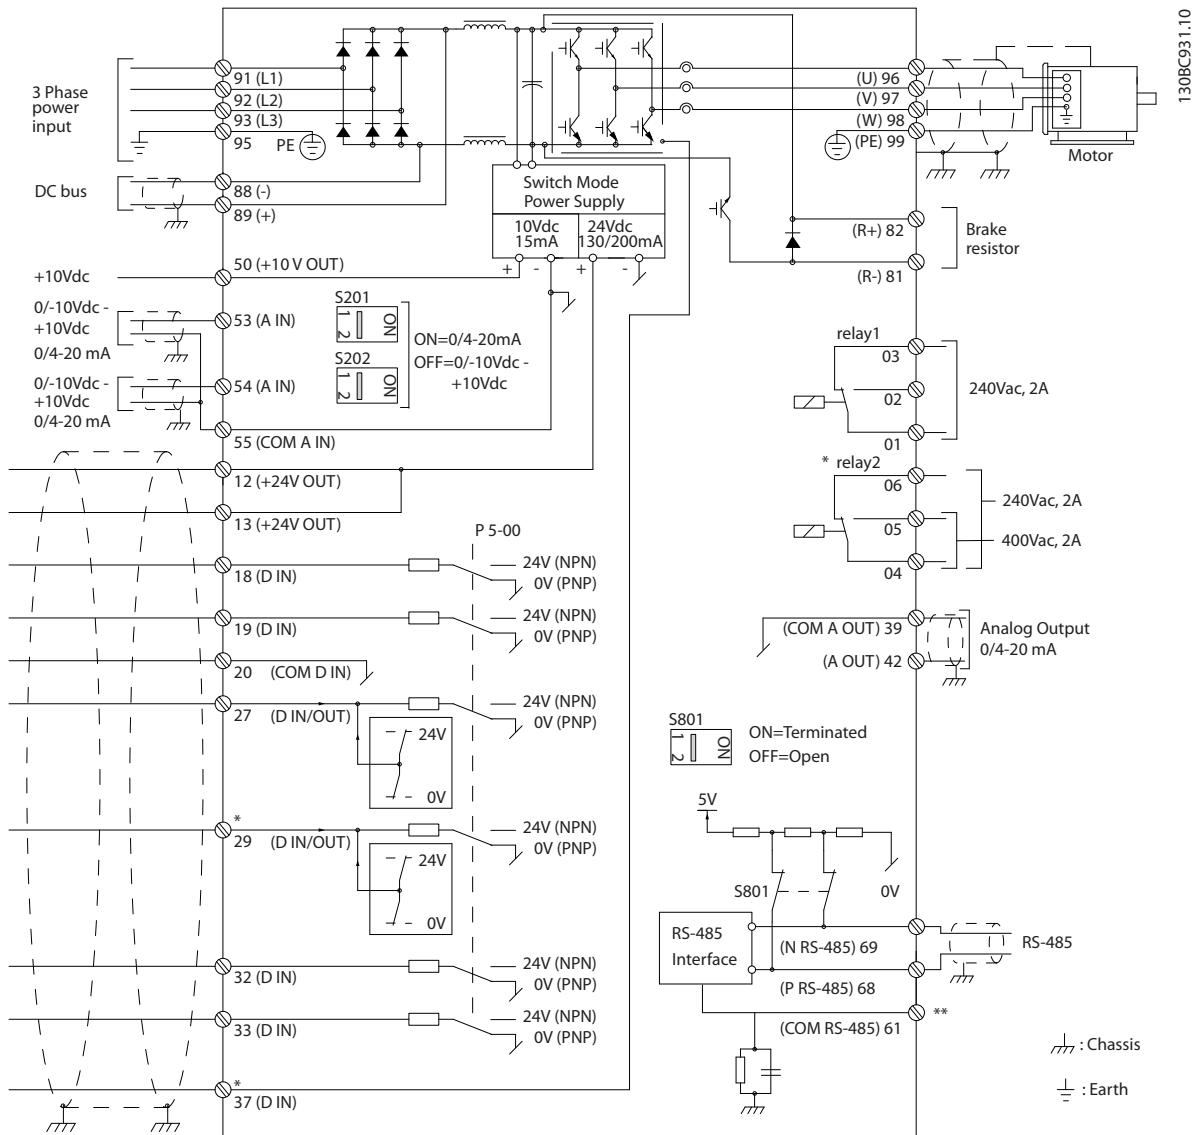

Illustration 1.2 Basic Wiring Schematic Drawing

A=Analog, D=Digital

Terminal 37 is used for Safe Torque Off. For Safe Torque Off installation instructions, refer to the *VLT® Frequency Converters - Safe Torque Off Operating Instructions*.

* Terminal 37 is not included in FC 301 (except enclosure type A1). Relay 2 and terminal 29 have no function in FC 301.

** Do not connect cable screen.

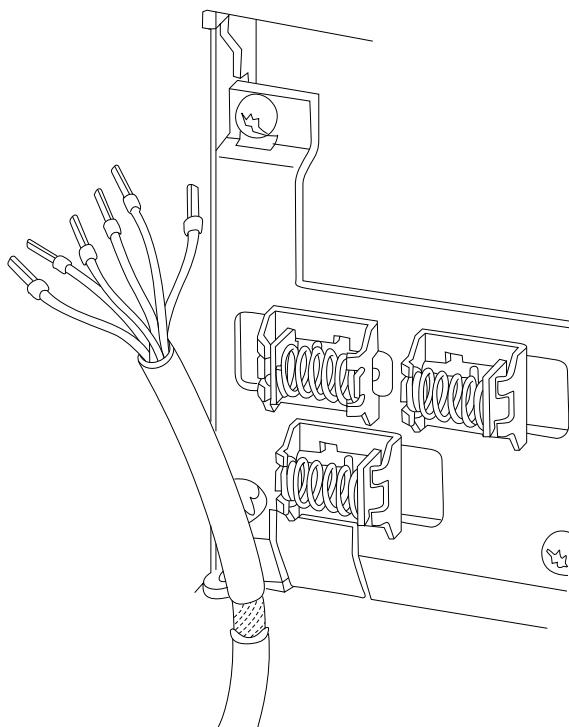

Very long control cables and analog signals may in rare cases, and depending on installation, result in 50/60 Hz ground loops due to noise from mains supply cables.

If 50/60 Hz ground loops occur, consider breaking the shield or insert a 100 nF capacitor between shield and enclosure.

To avoid ground currents from both groups to affect other groups, connect the digital and analog inputs and outputs separately to the common inputs (terminals 20, 55, and 39) of the frequency converter. For example, switching on the digital input may disturb the analog input signal.

Voltage reference via a potentiometer

Reference Source 1 = [1] Analog input 53 (default).

Terminal 53, low voltage = 0 V.

Terminal 53, high voltage = 10 V.

Terminal 53, low reference/feedback = 0 RPM.

Terminal 53, high reference/feedback = 1500 RPM.

Switch S201 = OFF (U)

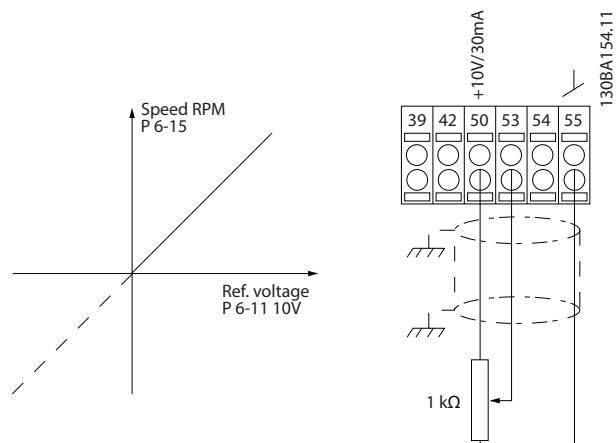

Illustration 1.9 Potentiometer Reference

1.6 Integrated Motion Controller

NOTICE

The integrated motion control is only available with special IMC software version 48.XX. To order the frequency converter with the IMC software, use the type code with software release version S067. The IMC software removes the following features from the frequency converter:

- PM and SynRM motor support in VVC⁺.
- Wobble function.
- Surface winder function.
- Extended process PID.
- VLT® Motion Control Option MCO 305 support.

The integrated motion controller (IMC) enables position control. Position control is available when [0] U/f, [2] Flux sensorless, or [3] Flux w/ motor feedb is selected in parameter 1-01 Motor Control Principle.

To activate the IMC functionality, select [9] Positioning or [10] Synchronization in parameter 1-00 Configuration Mode. IMC enables the following functions:

- Positioning: Absolute, relative, and touch probe.
- Homing.
- Position synchronization.

Position control in both positioning and synchronization modes can be either sensorless or with feedback. In the sensorless control principle, the motor angle calculated by the motor controller is used as feedback. In the closed loop control principle VLT® AutomationDrive FC 302 supports 24 V encoders as standard. With extra options, the frequency converter supports most standard incremental encoders, absolute encoders, and resolvers.

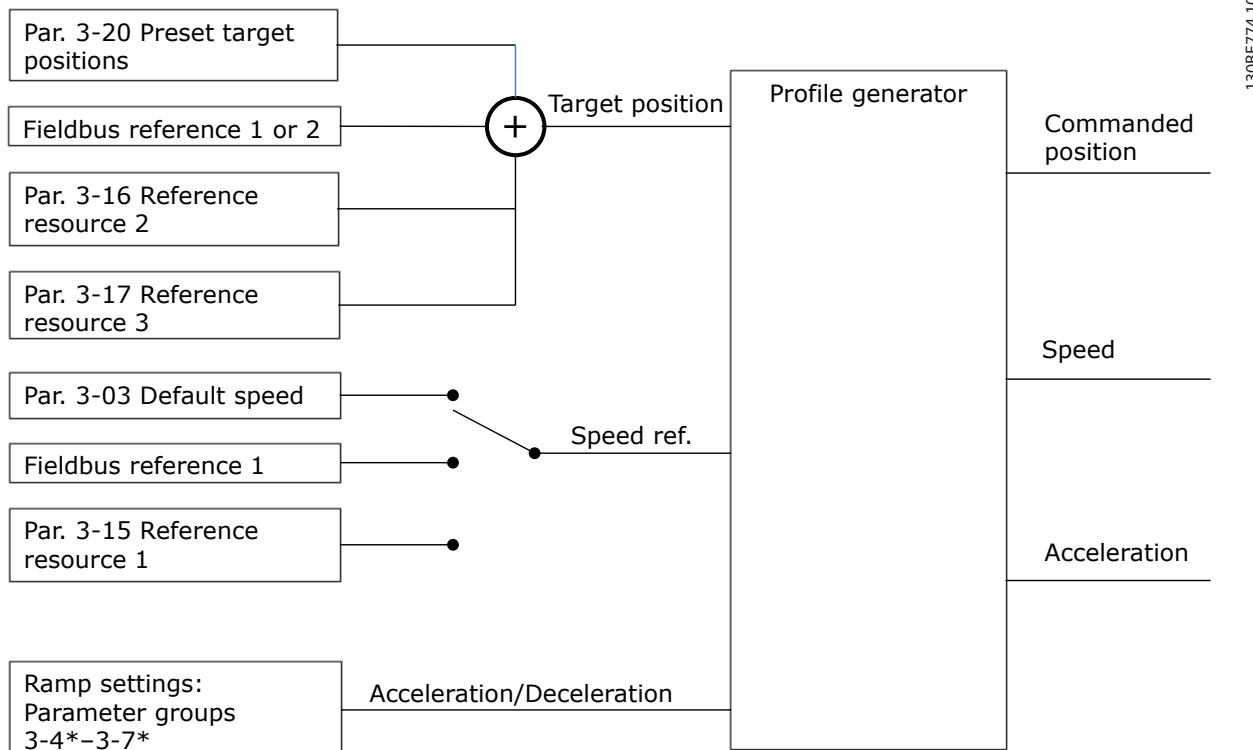

The position controller can handle both linear and rotary systems. The controller can scale positions to any relevant physical unit such as mm or degrees.

1.6.1 Positioning

The frequency converter supports relative positioning and absolute positioning. A positioning command requires 3 inputs:

- Target position.
- Speed reference.
- Ramp times.

These 3 inputs can come from various sources:

130BE774.10

Illustration 1.10 Positioning References

In each control cycle (1 ms) the profile generator calculates position, speed, and acceleration required to do the specified movement. The outputs from the profile generator are used as inputs for the position and speed controller as described in chapter 1.6.4 Control Loops.

1.6.2 Homing

Homing is required for creating a reference to the physical machine position in closed loop control principle with incremental encoder or in sensorless control principle. IMC supports various homing functions with or without a homing sensor. Select the homing function in *parameter 17-80 Homing Function*. After selecting a homing function, complete homing before executing absolute positioning.

1.6.3 Synchronization

In synchronization mode, the frequency converter follows the position of a master signal. The master signal and the offset between the master and the follower are handled as shown in *Illustration 1.11*.

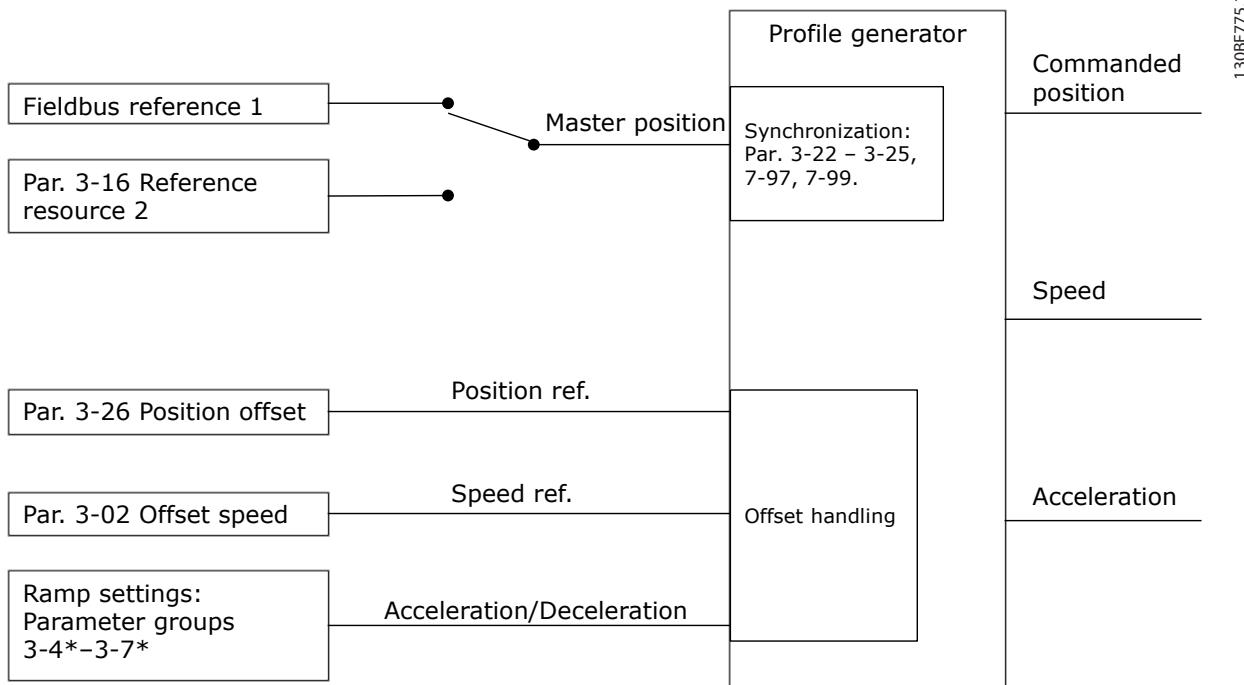

Illustration 1.11 Synchronization References

In each control cycle (1 ms) the profile generator calculates position, speed, and acceleration required to do the specified movement. The outputs from the profile generator are used as inputs for the position and speed controller as described in *chapter 1.6.4 Control Loops*.

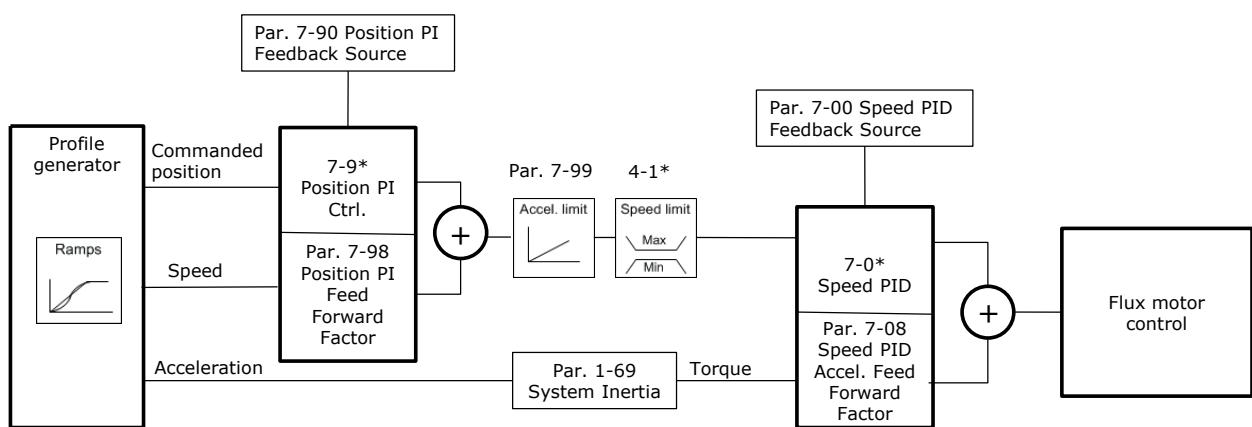

1.6.4 Control Loops

In positioning and synchronization mode, 2 extra control loops control the motor in addition to the motor controller running flux control principle, sensorless, or with motor feedback. The position PI controller is the outer loop providing the setpoint for the speed PID, which provides the reference for the motor controller. For a closed loop, feedback source can be selected individually for each of 3 controllers.

For sensorless control principle, select [0] Motor feedb. P1-02 in the following parameters:

- Speed PID: Parameter 7-00 Speed PID Feedback Source.
- Position PI: Parameter 7-90 Position PI Feedback Source.

With this set-up, both controllers use the motor angle calculated by the motor controller. *Illustration 1.12* shows the control structure and parameters affecting the control behavior:

130BE776.10

Illustration 1.12 Positioning and Synchronization Mode

1.6.5 Control and Status Signals

IMC control and status signals are available as digital I/O bits and fieldbus bits. *Table 1.4* shows the available options:

| Name | Function | Digital input ¹⁾ | Control word | Digital output | Status word |
|------------------------|---|-----------------------------|--------------|----------------|-------------|
| Control signals | | | | | |
| Start homing | Start selected homing function | x | x | - | - |
| Activate touch | Select touch probe positioning mode | x | x | - | - |
| Relative position | Selection between absolute and relative positioning | x | x | - | - |
| Enable reference | Start selected motion | x | x | - | - |
| Sync. to position mode | Select positioning in synchronizing mode | x | x | - | - |
| Home sensor | Select input for Home sensor | x | - | - | - |
| Home sensor inverse | Select input for Home sensor | x | - | - | - |
| Touch sensor | Select input for Touch Probe sensor | x | - | - | - |
| Touch sensor inverse | Select input for Touch Probe sensor | x | - | - | - |
| Status signals | | | | | |
| Homing OK | Homing is completed with the selected homing function. | - | - | x | x |
| On target | Positioning: Target position reached. Synchronization: Follower position aligned with master position. | - | - | x | x |

| Name | Function | Digital input ¹⁾ | Control word | Digital output | Status word |
|-----------------|--|-----------------------------|--------------|----------------|-------------|
| Position error | Maximum position error exceeded | – | – | x | x |
| Position limit | A position limit is reached (<i>parameter 3-06 Minimum Position or parameter 3-07 Maximum Position</i>). | – | – | x | – |
| Touch on target | Target position is reached in touch probe position mode. | – | – | x | x |
| Touch activated | Touch probe positioning active. | – | – | x | x |

Table 1.4 Control and Status Signals

1) For best accuracy, use fast digital inputs 18, 32, and 33 for home and touch probe sensors.

When [3] FC Motion Profile is selected in parameter 8-10 Control Word Profile, the bits in the control word and the status word have the following meaning:

| Bit | 0 | 1 |
|------------------|----------------------|------------------|
| 0 | Preset reference LSB | – |
| 1 | Preset reference MSB | – |
| 2 ¹⁾ | Preset reference EXB | – |
| 3 | Coast stop | No coast stop |
| 4 | Quick stop | No quick stop |
| 5 ¹⁾ | No reference | Enable reference |
| 6 | Ramp stop | Start |
| 7 | No reset | Reset |
| 8 | No jog | Jog |
| 9 ¹⁾ | Absolute | Relative |
| 10 | Data not valid | Data valid |
| 11 ¹⁾ | No homing | Start homing |
| 12 ¹⁾ | No touch | Activate touch |
| 13 | Setup select LSB | – |
| 14 | Setup select MSB | – |
| 15 | No reversing | Reversing |

Table 1.5 Control Word

1) Different from [0] FC profile.

Options for bits 12–15 in parameter 8-14 Configurable Control Word CTW:

- [13] Sync. to Pos. Mode
- [14] Ramp 2
- [15] Relay 1
- [16] Relay 2

| Bit | 0 | 1 |
|-----------------|-------------------------------|---------------------------|
| 0 | Control not ready | Control ready |
| 1 | Frequency converter not ready | Frequency converter ready |
| 2 | Coasting | Enable |
| 3 | No error | Trip |
| 4 ¹⁾ | Not homed | Home done |
| 5 | Reserved | Reserved |
| 6 | No error | Trip lock |
| 7 | No warning | Warning |
| 8 ¹⁾ | Not on target position | Target position reached |
| 9 | Local operation | Bus control |
| 10 | Out of frequency limit | Frequency limit OK |
| 11 | No operation | In operation |
| 12 | Frequency converter OK | Stopped, auto start |
| 13 | Voltage OK | Voltage exceeded |
| 14 | Torque OK | Torque exceeded |
| 15 | Timer OK | Timer exceeded |

Table 1.6 Status Word

1) Different from [0] FC profile.

Options for bits 5 and 12–15 in parameter 8-13 Configurable Status Word STW:

- [4] Position Error
- [5] Position Limit
- [6] Touch on Target
- [7] Touch Activated

2

2 How to Program

2.1 The Graphical and Numerical Local Control Panels

Easy programming of the frequency converter is performed by the graphical LCP (LCP 102). Consult the frequency converter *design guide*, when using the numeric local control panel (LCP 101).

The LCP is divided into 4 functional groups:

1. Graphical display with status lines.
2. Menu keys and indicator lights - changing parameters and switching between display functions.
3. Navigation keys and indicator lights.
4. Operation keys and indicator lights.

The LCP display can show up to 5 items of operating data while showing *Status*.

Display lines:

- a. **Status line:** Status messages showing icons and graphics.
- b. **Line 1–2:** Operator data lines showing data defined or selected. Add up to 1 extra line by pressing [Status].
- c. **Status line:** Status messages showing text.

NOTICE

If start-up is delayed, the LCP shows the INITIALiNG message until it is ready. Adding or removing options may delay the start-up.

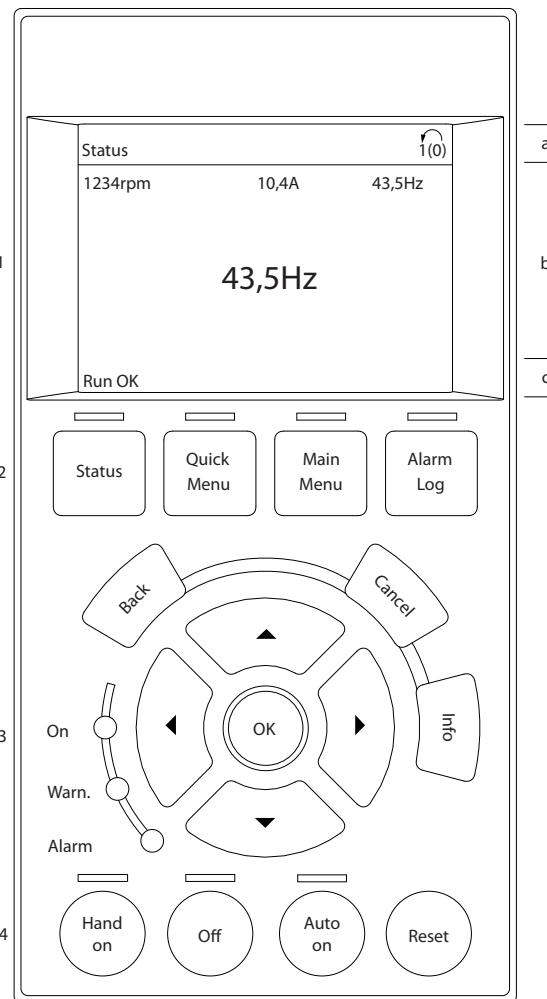

Illustration 2.1 LCP

2.1.1 The LCD Display

The display has backlight and a total of 6 alpha-numeric lines. The display lines show the direction of rotation (arrow), the selected set-up and the programming set-up. The display is divided into 3 sections.

Top section

The top section shows up to 2 measurements in normal operating status.

Middle section

The top line shows up to 5 measurements with related unit, regardless of status (except in the case of alarm/warning).

Bottom section

The bottom section always shows the state of the frequency converter in *Status* mode.

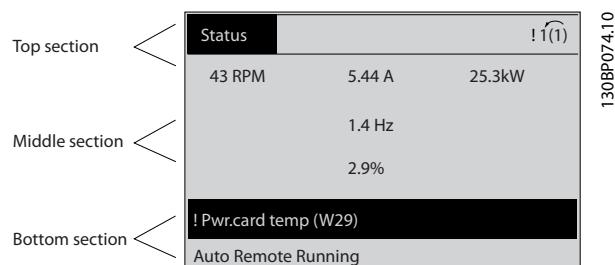

Illustration 2.2 Display

The active set-up (selected as the active set-up in *parameter 0-10 Active Set-up*) is shown. When programming another set-up than the active set-up, the number of the programmed set-up appears to the right.

Display contrast adjustment

Press [Status] and [Δ] for darker display

Press [Status] and [∇] for brighter display

Most parameter set-ups can be changed immediately via the LCP, unless a password has been created via *parameter 0-60 Main Menu Password* or via *parameter 0-65 Quick Menu Password*.

Indicator lights

If certain threshold values are exceeded, the alarm and/or warning indicator lights up. A status and alarm text appear on the LCP.

The ON indicator light is activated when the frequency converter receives mains voltage or via a DC bus terminal or 24 V external supply. At the same time, the back indicator light is on.

- Green LED/On: Control section is working.
- Yellow LED/Warn: Indicates a warning.
- Flashing Red LED/Alarm: Indicates an alarm.

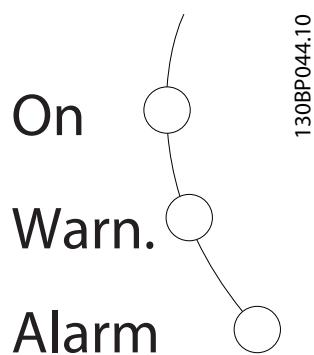

Illustration 2.3 Indicator Lights

LCP keys

The control keys are divided into functions. The keys below the display and indicator lights are used for parameter set-up, including option of display indication during normal operation.

Illustration 2.4 LCP Keys

[Status]

Indicates the status of the frequency converter and/or the motor. Select between 3 different readouts by pressing [Status]: 5 line readouts, 4 line readouts, or smart logic control.

Press [Status] for selecting the mode of display or for changing back to display mode from either the quick menu mode, the main menu mode, or the alarm mode. Also use [Status] to toggle single or double readout mode.

[Quick Menu]

Allows quick access to different Quick Menus such as:

- My personal menu.
- Quick set-up.
- Changes made.
- Loggings.

Press [Quick Menu] to program the parameters belonging to the Quick Menu. It is possible to switch directly between quick menu mode and main menu mode.

[Main Menu]

Is used for programming all parameters.

It is possible to switch directly between main menu mode and quick menu mode.

Parameter shortcut can be carried out by pressing down [Main Menu] for 3 s. The parameter shortcut allows direct access to any parameter.

[Alarm Log]

Shows an alarm list of the 5 latest alarms (numbered A1–A5). To obtain extra details about an alarm, press the navigation keys to maneuver to the alarm number and press [OK]. Information is shown about the condition of the frequency converter before it enters the alarm mode.

[Back]

Returns to the previous step or layer in the navigation structure.

[Cancel]

Last change or command is canceled as long as the display has not been changed.

[Info]

Supplies information about a command, parameter, or function in any display window. [Info] provides detailed information whenever help is needed.

Exit *Info* mode by pressing either [Info], [Back], or [Cancel].

Illustration 2.5 Back

Illustration 2.6 Cancel

Illustration 2.7 Info

Navigation keys

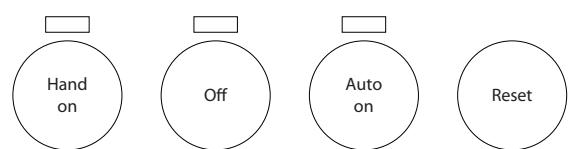

The 4 navigation keys are used to navigate between the different options available in Quick Menu, Main Menu, and Alarm Log. Press the keys to move the cursor.

[OK]

Use for selecting a parameter marked by the cursor and for enabling the change of a parameter.

Local control keys

Local control keys are at the bottom of the LCP.

130BP046.10

Illustration 2.8 Local Control Keys

[Hand On]

Enables control of the frequency converter via the LCP. [Hand On] also starts the motor, and it is now possible to enter the motor speed data with the navigation keys. The key can be selected as [1] Enable or [0] Disable via parameter 0-40 [Hand on] Key on LCP

External stop signals activated with control signals or a fieldbus override a start command via the LCP.

The following control signals are still active when [Hand On] is activated:

- [Hand on] - [Off] - [Auto On].
- Reset.
- Coast stop inverse.
- Reversing.
- Set-up select bit 0 - Set-up select bit 1.
- Stop command from serial communication.
- Quick stop.
- DC brake.

[Off]

Stops the connected motor. The key can be selected as [1] Enable or [0] Disable via parameter 0-41 [Off] Key on LCP. If no external stop function is selected and the [Off] key is inactive, the motor can be stopped by disconnecting the voltage.

[Auto On]

Enables the frequency converter to be controlled via the control terminals and/or serial communication. When a start signal is applied on the control terminals and/or the bus, the frequency converter starts. The key can be selected as [1] Enable or [0] Disable via parameter 0-42 [Auto on] Key on LCP.

NOTICE

An active HAND-OFF-AUTO signal via the digital inputs has higher priority than the control keys [Hand On] – [Auto On].

[Reset]

Is used for resetting the frequency converter after an alarm (trip). It can be selected as [1] Enable or [0] Disable via parameter 0-43 [Reset] Key on LCP.

The parameter shortcut can be carried out by pressing down the [Main Menu] key for 3 s. The parameter shortcut provides direct access to any parameter.

2.1.2 Quick Transfer of Parameter Settings between Multiple Frequency Converters

Once the set-up of a frequency converter is complete, store the data in the LCP or on a PC via MCT 10 Set-up Software.

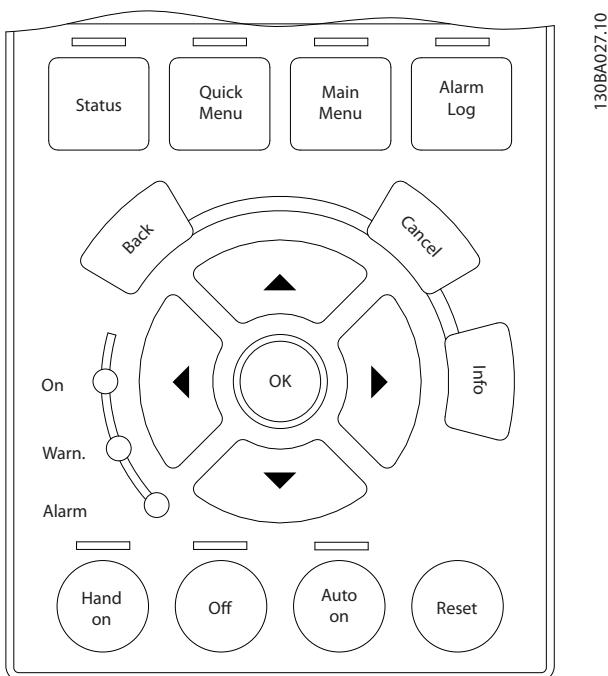

Illustration 2.9 LCP

Data storage in LCP

NOTICE

Stop the motor before performing this operation.

To store the data in the LCP:

1. Go to parameter 0-50 LCP Copy.
2. Press the [OK] key.
3. Select [1] All to LCP.
4. Press the [OK] key.

All parameter settings are now stored in the LCP indicated by the progress bar. When 100% is reached, press [OK].

Connect the LCP to another frequency converter and copy the parameter settings to this frequency converter as well.

Data transfer from LCP to frequency converter

NOTICE

Stop the motor before performing this operation.

To transfer the data from the LCP to the frequency converter:

1. Go to parameter 0-50 LCP Copy.
2. Press the [OK] key.

3. Select [2] All from LCP.
4. Press the [OK] key.

The parameter settings stored in the LCP are now transferred to the frequency converter indicated by the progress bar. When 100% is reached, press [OK].

2

2.1.3 Display Mode

In normal operation, up to 5 different operating variables can be indicated continuously in the middle section: 1.1, 1.2, and 1.3, as well as 2 and 3.

2.1.4 Display Mode - Selection of Readouts

It is possible to toggle between 3 status readout screens by pressing [Status].

Operating variables with different formatting are shown in each status view further in this section.

Table 2.1 shows the measurements that can be linked to each of the operating variables. When options are mounted, additional measurements are available.

Define the links via

- Parameter 0-20 Display Line 1.1 Small.
- Parameter 0-21 Display Line 1.2 Small.
- Parameter 0-22 Display Line 1.3 Small.
- Parameter 0-23 Display Line 2 Large.
- Parameter 0-24 Display Line 3 Large.

Each readout parameter selected in parameter 0-20 Display Line 1.1 Small to parameter 0-24 Display Line 3 Large has its own scale and digits after a possible decimal point. The larger the numeric value of a parameter is, the fewer digits are displayed after the decimal point.

Example: Current readout 5.25 A, 15.2 A, 105 A.

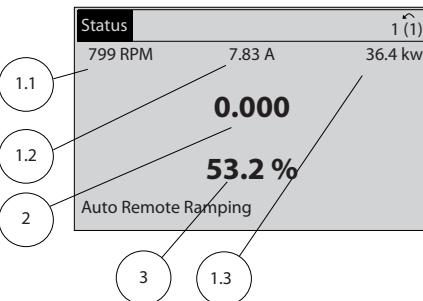

| Operating variable | Unit |
|---------------------------------------|--------|
| Parameter 16-00 Control Word | hex |
| Parameter 16-01 Reference [Unit] | [Unit] |
| Parameter 16-02 Reference [%] | % |
| Parameter 16-03 Status Word | hex |
| Parameter 16-05 Main Actual Value [%] | % |
| Parameter 16-10 Power [kW] | [kW] |
| Parameter 16-11 Power [hp] | [hp] |
| Parameter 16-12 Motor Voltage | [V] |
| Parameter 16-13 Frequency | [Hz] |
| Parameter 16-14 Motor current | [A] |
| Parameter 16-16 Torque [Nm] | Nm |
| Parameter 16-17 Speed [RPM] | [RPM] |
| Parameter 16-18 Motor Thermal | % |
| Parameter 16-20 Motor Angle | |
| Parameter 16-30 DC Link Voltage | V |

| Operating variable | Unit |
|--|--------|
| Parameter 16-32 Brake Energy /s | kW |
| Parameter 16-33 Brake Energy Average | kW |
| Parameter 16-34 Heatsink Temp. | °C |
| Parameter 16-35 Inverter Thermal | % |
| Parameter 16-36 Inv. Nom. Current | A |
| Parameter 16-37 Inv. Max. Current | A |
| Parameter 16-38 SL Controller State | |
| Parameter 16-39 Control Card Temp. | °C |
| Parameter 16-40 Logging Buffer Full | |
| Parameter 16-50 External Reference | |
| Parameter 16-51 Pulse Reference | |
| Parameter 16-52 Feedback[Unit] | [Unit] |
| Parameter 16-53 Digi Pot Reference | |
| Parameter 16-60 Digital Input | bin |
| Parameter 16-61 Terminal 53 Switch Setting | V |
| Parameter 16-62 Analog Input 53 | |
| Parameter 16-63 Terminal 54 Switch Setting | V |
| Parameter 16-64 Analog Input 54 | |
| Parameter 16-65 Analog Output 42 [mA] | [mA] |
| Parameter 16-66 Digital Output [bin] | [bin] |
| Parameter 16-67 Pulse Input #29 [Hz] | [Hz] |
| Parameter 16-68 Freq. Input #33 [Hz] | [Hz] |
| Parameter 16-69 Pulse Output #27 [Hz] | [Hz] |
| Parameter 16-70 Pulse Output #29 [Hz] | [Hz] |
| Parameter 16-71 Relay Output [bin] | |
| Parameter 16-72 Counter A | |
| Parameter 16-73 Counter B | |
| Parameter 16-80 Fieldbus CTW 1 | hex |
| Parameter 16-82 Fieldbus REF 1 | hex |
| Parameter 16-84 Comm. Option STW | hex |
| Parameter 16-85 FC Port CTW 1 | hex |
| Parameter 16-86 FC Port REF 1 | hex |
| Parameter 16-90 Alarm Word | |
| Parameter 16-92 Warning Word | |
| Parameter 16-94 Ext. Status Word | |

Table 2.1 Units

Status view I

This readout state is standard after start-up or initialization. Press [Info] to obtain information about the units linked to the shown operating variables (1.1, 1.2, 1.3, 2 and 3). See the operating variables shown in *Illustration 2.10*.

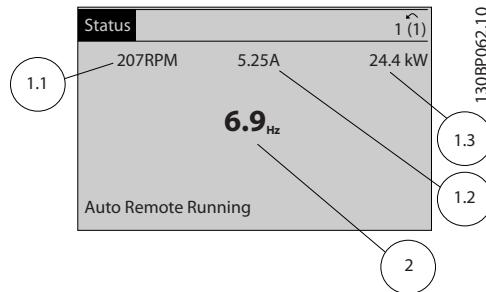

130BP041.10

Illustration 2.10 Status View I

Status view II

See the operating variables (1.1, 1.2, 1.3, and 2) shown in *Illustration 2.11*.

In the example, speed, motor current, motor power, and frequency are selected as variables in the first and second lines.

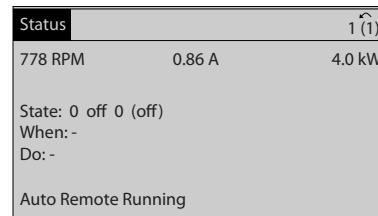

130BP062.10

Illustration 2.11 Status View II

Status view III

This state shows the event and action of the smart logic control. For further information, see *chapter 3.14 Parameters: 13-** Smart Logic Control*.

130BP063.10

Illustration 2.12 Status View III

2.1.5 Parameter Set-up

The frequency converter can be used for practically all assignments. The frequency converter offers an option between 2 programming modes:

- Main menu mode.
- Quick menu mode.

Main menu provides access to all parameters. Quick menu takes the user through a few parameters, making it possible to start operating the frequency converter. Change a parameter in either main menu mode or quick menu mode.

2.1.6 Quick Menu Key Functions

Press [Quick Menu] to enter a list of different areas contained in the *Quick Menu*.

Select *Q1 My Personal Menu* to display the selected personal parameters. These parameters are selected in *parameter 0-25 My Personal Menu*. Up to 50 different parameters can be added in this menu.

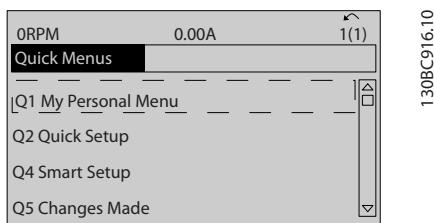

Illustration 2.13 Quick Menus

Select *Q2 Quick Setup* to go through a selection of parameters to get the motor running almost optimally. The default setting for the other parameters considers the required control functions and the configuration of signal inputs/outputs (control terminals).

The parameter selection is effected with the navigation keys. The parameters in *Table 2.2* are accessible.

| Parameter | Setting |
|---|-------------------------------|
| Parameter 0-01 Language | |
| Parameter 1-20 Motor Power [kW] | [kW] |
| Parameter 1-22 Motor Voltage | [V] |
| Parameter 1-23 Motor Frequency | [Hz] |
| Parameter 1-24 Motor Current | [A] |
| Parameter 1-25 Motor Nominal Speed | [RPM] |
| Parameter 5-12 Terminal 27 Digital Input | [0] No function ¹⁾ |
| Parameter 1-29 Automatic Motor Adaptation (AMA) | [1] Enable complete AMA |
| Parameter 3-02 Minimum/Offset Reference | [RPM] |
| Parameter 3-03 Maximum Reference | [RPM] |
| Parameter 3-41 Ramp 1 Ramp Up Time | [s] |
| Parameter 3-42 Ramp 1 Ramp Down Time | [s] |
| Parameter 3-13 Reference Site | |

Table 2.2 Selection of Parameter

1) If terminal 27 is set to [0] No function, no connection to +24 V on terminal 27 is necessary.

Select *Changes made* to get information about:

- The last 10 changes. Use the [Δ] [∇] navigation keys to scroll between the last 10 changed parameters.
- The changes made since default setting.

Select *Loggings* to get information about the display line readouts. The information is shown as graphs.

Only parameters selected in *parameter 0-20 Display Line 1.1 Small* and *parameter 0-24 Display Line 3 Large* can be viewed. It is possible to store up to 120 samples in the memory for later reference.

2.1.7 Initial Commissioning

The easiest way of carrying out the initial commissioning is by pressing [Quick Menu] and following the quick set-up procedure using LCP 102 (read *Table 2.3* from left to right). The example applies to open-loop applications.

| Press | | | | |
|---|----|--|----|---|
| Quick Menu | ↓ | Q2 Quick Menu | OK | ↓ |
| Parameter 0-01 Language | OK | Set language | ↓ | |
| Parameter 1-20 Motor Power [kW] | OK | Set motor nameplate power | ↓ | |
| Parameter 1-22 Motor Voltage | OK | Set nameplate voltage | ↓ | |
| Parameter 1-23 Motor Frequency | OK | Set nameplate frequency | ↓ | |
| Parameter 1-24 Motor Current | OK | Set nameplate current | ↓ | |
| Parameter 1-25 Motor Nominal Speed | OK | Set nameplate speed in RPM | ↓ | |
| Parameter 5-12 Terminal 27 Digital Input | OK | If terminal default is [2] Coast inverse, it is possible to change this setting to [0] No function. No connection to terminal 27 is then needed for running AMA. | ↓ | |
| Parameter 1-29 Automatic Motor Adaptation (AMA) | OK | Set desired AMA function. Enable complete AMA is recommended. | ↓ | |
| Parameter 3-02 Minimum/Offset Reference | OK | Set the minimum speed of the motor shaft. | ↓ | |
| Parameter 3-03 Maximum Reference | OK | Set the maximum speed of the motor shaft. | ↓ | |
| Parameter 3-41 Ramp 1 Ramp Up Time | OK | Set the ramping up time with reference to synchronous motor speed, n_s . | ↓ | ↓ |
| Parameter 3-42 Ramp 1 Ramp Down Time | OK | Set the ramping down time with reference to synchronous motor speed, n_s . | ↓ | |
| Parameter 3-13 Reference Site | OK | Set the site from where the reference must work. | ↓ | |

Table 2.3 Quick Set-up Procedure

Another easy way of commissioning the frequency converter is by using the smart application set-up (SAS), which can also be found by pressing [Quick Menu]. Follow the instructions on the successive shields to set up the applications listed.

The [Info] key can be used throughout the SAS to see help information for various selections, settings, and messages. The following 3 applications are included:

- Mechanical Brake.
- Conveyor.
- Pump/Fan.

The following 4 fieldbusses can be selected:

- PROFIBUS.
- PROFINET.
- DeviceNet.
- EtherNet/IP.

NOTICE

The frequency converter ignores the start conditions when SAS is active.

NOTICE

The smart set-up runs automatically on the first power-up of the frequency converter or after a reset to factory settings. If no action is taken, the SAS shield automatically disappears after 10 minutes.

2.1.8 Main Menu Mode

Press [Main Menu] to enter the main menu mode. The readout in *Illustration 2.14* appears on the display. The middle and bottom sections in the display show a list of parameter groups, which can be selected by toggling the [\blacktriangleleft] and [\triangleright] keys.

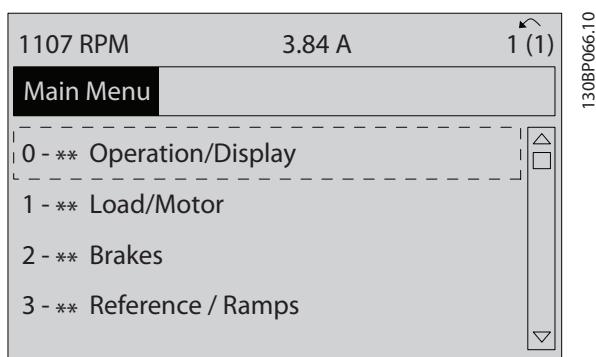

Illustration 2.14 Main Menu Mode

Each parameter has a name and number which remain the same regardless of the programming mode. In the main menu mode, the parameters are divided into groups. The first digit of the parameter number (from the left) indicates the parameter group number.

All parameters can be changed in the Main Menu. However, depending on the choice of configuration (*parameter 1-00 Configuration Mode*), some parameters can be hidden. For example, open loop hides all the PID parameters, and other enabled options make more parameter groups visible.

2.1.9 Parameter Selection

In the main menu mode, the parameters are divided into groups. Select a parameter group with the navigation keys. The following parameter groups are accessible:

| Group number | Parameter group |
|--------------|---------------------------------|
| 0-** | Operation/Display |
| 1-** | Load/Motor |
| 2-** | Brakes |
| 3-** | References/Ramps |
| 4-** | Limits/Warnings |
| 5-** | Digital In/Out |
| 6-** | Analog In/Out |
| 7-** | Controls |
| 8-** | Comm. and Options |
| 9-** | PROFIBUS |
| 10-** | CAN Fieldbus |
| 11-** | Reserved Com. 1 |
| 12-** | Ethernet |
| 13-** | Smart Logic |
| 14-** | Special Functions |
| 15-** | Frequency converter Information |
| 16-** | Data Readouts |
| 17-** | Motor Feedb. Option |
| 18-** | Data Readouts 2 |
| 20-** | FC Closed Loop |
| 21-** | Extended Closed Loop |
| 22-** | Application Functions |
| 23-** | Time-based Functions |
| 24-** | Application Functions 2 |
| 25-** | Cascade Controller |
| 26-** | Analog I/O Option MCB 109 |
| 29-** | Water Application Functions |
| 30-** | Special Features |
| 32-** | MCO Basic Settings |
| 33-** | MCO Adv. Settings |
| 34-** | MCO Data Readouts |
| 35-** | Sensor Input Option |

Table 2.4 Accessible Parameter Groups

After selecting a parameter group, select a parameter with the navigation keys.

The middle section on the display shows the parameter number and name, and the selected parameter value.

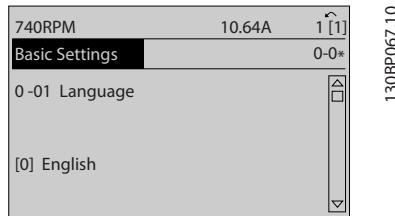

Illustration 2.15 Parameter Selection

2.1.10 Changing Data

The procedure for changing data is the same in the quick menu mode and the main menu mode. Press [OK] to change the selected parameter.

The procedure for changing data depends on whether the selected parameter represents a numeric data value or a text value.

2.1.11 Changing a Text Value

If the selected parameter is a text value, change the text value with the [\blacktriangleleft] [\triangleright] keys.

Place the cursor on the value to save and press [OK].

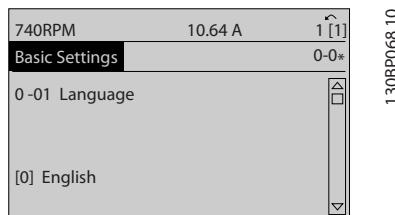

Illustration 2.16 Changing a Text Value

2.1.12 Changing a Data Value

If the selected parameter shows a numeric data value, change the selected data value with the [\blacktriangleleft] [\triangleright] navigation keys and the [\blacktriangleup] [\blacktriangledown] navigation keys. Press [\blacktriangleleft] [\triangleright] keys to move the cursor horizontally.

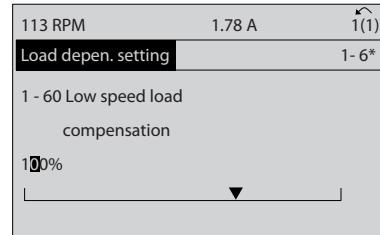

Illustration 2.17 Changing a Data Value

Press [\blacktriangleup] [\blacktriangledown] keys to change the data value. [\blacktriangleup] increases the data value, and [\blacktriangledown] decreases the data value. Place the cursor on the value to save and press [OK].

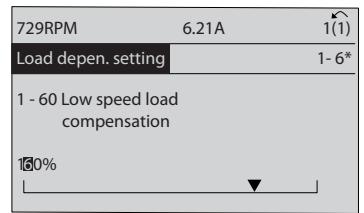

Illustration 2.18 Saving a Data Value

2.1.13 Infinitely Variable Change of Numeric Data Value

If the selected parameter shows a numeric data value, select a digit with [\blacktriangleleft] [\triangleright].

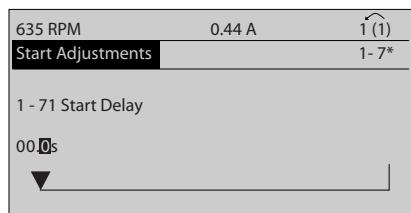

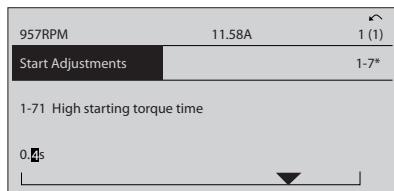

Illustration 2.19 Selecting a Digit

Change the selected digit infinitely variably with [Δ] [∇]. The cursor indicates the selected digit. Place the cursor on the digit to save and press [OK].

130BP072.10

Illustration 2.20 Saving

2.1.14 Value, Step-by-step

Certain parameters can be changed step-by-step. This applies to:

- Parameter 1-20 Motor Power [kW].
- Parameter 1-22 Motor Voltage.
- Parameter 1-23 Motor Frequency.

The parameters are changed both as a group of numeric data values and as numeric data values that are infinitely varying.

2.1.15 Readout and Programming of Indexed Parameters

Parameters are indexed when placed in a rolling stack.

Parameter 15-30 Fault Log: Error Code to

parameter 15-32 Alarm Log: Time contain a fault log, which can be read out. Select a parameter, press [OK], and press the keys [Δ] [∇] to scroll through the value log.

For example, *parameter 3-10 Preset Reference* is changed as follows:

1. Select the parameter, press [OK], and press [Δ] [∇] to scroll through the indexed values.
2. To change the parameter value, select the indexed value and press [OK].
3. Change the value by pressing [Δ] [∇].
4. Press [OK] to accept the new setting.
5. Press [Cancel] to abort. Press [Back] to leave the parameter.

2.1.16 How to Program on the Numerical Local Control Panel

The following instructions are valid for the numerical LCP (LCP 101).

The control panel is divided into 4 functional groups:

1. Numerical display.
2. Menu keys and indicator lights - changing parameters and switching between display functions.
3. Navigation keys and indicator lights.
4. Operation keys and indicator lights.

Display line

Status messages showing icons and numeric value.

Indicator lights

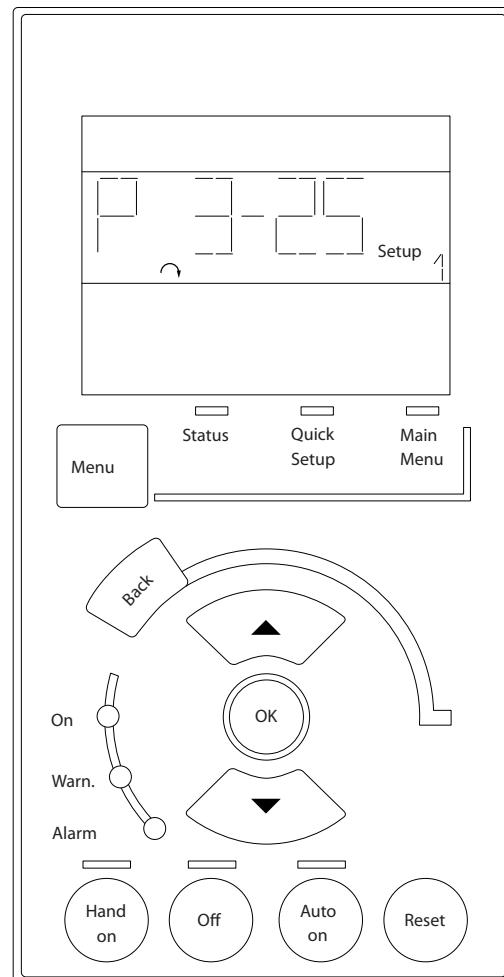

- Green LED/On: Indicates if control section is on.
- Yellow LED/Wrn: Indicates a warning.
- Flashing red LED/Alarm: Indicates an alarm.

LCP keys

[Menu]

Select 1 of the following modes:

- Status.
- Quick Set-up.
- Main Menu.

130BA191.10

Illustration 2.21 LCP Keys

Status mode

Status mode shows the status of the frequency converter or the motor.

If an alarm occurs, the NLCP automatically switches to status mode.

Several alarms can be shown.

NOTICE

Parameter copy is not possible with LCP 101 numerical local control panel.

Illustration 2.22 Status Mode

Illustration 2.23 Alarm

Main Menu/Quick Set-up

Are used for programming all parameters or only the parameters in the *Quick Menu* (see also description of the LCP 102 in chapter 2.1 *The Graphical and Numerical Local Control Panels*).

When the value flashes, press [\blacktriangle] or [\blacktriangledown] to change parameter values.

1. Press [Main Menu] to select main menu.
2. Select the parameter group [xx-__] and press [OK].
3. Select the parameter [__-xx] and press [OK].
4. If the parameter is an array parameter, select the array number and press [OK].
5. Select the required data value and press [OK].

Parameters with functional options show values such as [1], [2], and so on. For a description of the different options, see the individual parameter descriptions in chapter 3 *Parameter Descriptions*.

[Back]

Used for stepping backwards.

[\blacktriangle] [\blacktriangledown] are used for maneuvering between commands and within parameters.

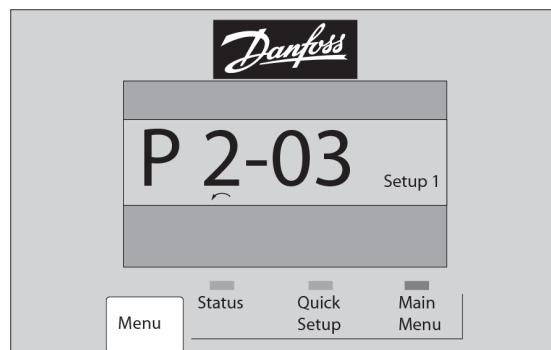

Illustration 2.24 Main Menu/Quick Set-up

2.1.17 LCP Keys

Keys for local control are at the bottom of the LCP.

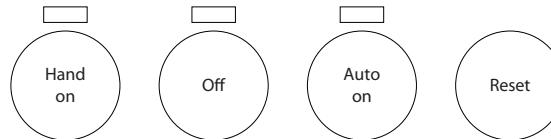

Illustration 2.25 LCP Keys

[Hand On]

Enables control of the frequency converter via the LCP. [Hand On] also starts the motor and it is now possible to enter the motor speed data with the navigation keys. The key can be selected as [1] *Enable* or [0] *Disable* via parameter 0-40 *[Hand on]* Key on LCP.

External stop signals activated with control signals, or a fieldbus, override a start command via the LCP.

The following control signals are still active when [Hand On] is activated:

- [Hand On] - [Off] - [Auto On].
- Reset.
- Coast stop inverse.
- Reversing.
- Set-up select lsb - Set-up select msb.
- Stop command from serial communication.
- Quick stop.
- DC brake.

[Off]

Stops the connected motor. The key can be selected as [1] *Enable* or [0] *Disable* via parameter 0-41 *[Off]* Key on LCP.

If no external stop function is selected and the [Off] key is inactive, the motor can be stopped by disconnecting the voltage.

[Auto On]

Enables control of the frequency converter via the control terminals and/or serial communication. When a start signal is applied on the control terminals and/or the bus, the frequency converter starts. The key can be selected as [1] *Enable* or [0] *Disable* via parameter 0-42 *[Auto on] Key on LCP*.

NOTICE

An active HAND-OFF-AUTO signal via the digital inputs has higher priority than the control keys *[Hand On]* and *[Auto On]*.

[Reset]

Is used for resetting the frequency converter after an alarm (trip). It can be selected as [1] *Enable* or [0] *Disable* via parameter 0-43 *[Reset] Key on LCP*.

2.1.18 Initialization to Default Settings

Initialize the frequency converter to default settings in 2 ways.

Recommended initialization (via parameter 14-22 Operation Mode)

1. Select parameter 14-22 *Operation Mode*.
2. Press [OK].
3. Select [2] *initialization*.
4. Press [OK].
5. Disconnect the mains supply and wait until the display turns off.
6. Reconnect the mains supply. The frequency converter is now reset.

Parameter 14-22 Operation Mode initializes all except:

- *Parameter 14-50 RFI Filter*.
- *Parameter 8-30 Protocol*.
- *Parameter 8-31 Address*.
- *Parameter 8-32 FC Port Baud Rate*.
- *Parameter 8-35 Minimum Response Delay*.
- *Parameter 8-36 Max Response Delay*.
- *Parameter 8-37 Max Inter-Char Delay*.
- *Parameter 15-00 Operating hours* to *parameter 15-05 Over Volt's*.
- *Parameter 15-20 Historic Log: Event* to *parameter 15-22 Historic Log: Time*.
- *Parameter 15-30 Fault Log: Error Code* to *parameter 15-32 Alarm Log: Time*.

Manual initialization

1. Disconnect from mains and wait until the display turns off.
2. 2a Press [Status] - [Main Menu] - [OK] at the same time while powering up the LCP 102, graphical display.
2b Press [Menu] - [OK] while powering up the LCP 101, numerical display.
3. Release the keys after 5 s.
4. The frequency converter is now programmed according to default settings.

This procedure initializes all except:

- *Parameter 15-00 Operating hours*.
- *Parameter 15-03 Power Up's*.
- *Parameter 15-04 Over Temp's*.
- *Parameter 15-05 Over Volt's*.

NOTICE

A manual initialization also resets serial communication, RFI filter settings (*parameter 14-50 RFI Filter*), and fault log settings.

3 Parameter Descriptions

3.1 Parameter Selection

Parameters are organized in parameter groups for easy selection of parameters.

0-** *Operation and Display* includes:

- Basic settings, set-up handling.
- Display and local control panel parameters for selecting readouts, setting up selections, and copying functions.

1-** *Load and Motor* includes all load and motor-related parameters.

2-** *Brake* includes:

- DC brake.
- Dynamic brake (resistor brake).
- Mechanical brake.
- Overvoltage control.

3-** *Reference / Ramps* includes DigiPot function.

4-** *Limits / Warnings* includes setting of limits and warning parameters.

5-** *Digital In/Out* includes relay controls.

6-** *Analog In/Out*.

7-** *Controllers* includes parameters for speed and process controls.

8-** *Comm. and Options* includes parameters for setting of RS485 and USB port parameters.

9-** *PROFdrive*.

10-** *CAN Fieldbus*.

12-** *Ethernet*.

13-** *Smart Logic*.

14-** *Special Functions*.

15-** *Drive Information*.

16-** *Data Readouts*.

17-** *Position Feedback*.

18-** *Data Readouts 2*.

30-** *Special Features*.

32-** *MCO Basic Settings*.

33-** *MCO Adv. Settings*.

34-** *MCO Data Readouts*.

35-** *Sensor Input Option*.

NOTICE

To see if a parameter can be used in a specific control mode, use *Table 4.3*.

3.2 Parameters: 0-** Operation and Display

Parameters related to the fundamental functions of the frequency converter, function of the LCP keys, and configuration of the LCP display.

3.2.1 0-0* Basic Settings

| 0-01 Language | | |
|---------------|--|-------------------------------|
| Option: | Function: | |
| | Defines display language. The frequency converter is delivered with 4 different language packages. English and German are included in all packages. English cannot be erased or manipulated. | |
| [0] * | English | Part of language packages 1–4 |
| [1] | Deutsch | Part of language packages 1–4 |
| [2] | Francais | Part of language package 1 |
| [3] | Dansk | Part of language package 1 |
| [4] | Spanish | Part of language package 1 |
| [5] | Italiano | Part of language package 1 |
| [6] | Svenska | Part of language package 1 |
| [7] | Nederlands | Part of language package 1 |
| [10] | Chinese | Part of language package 2 |
| [20] | Suomi | Part of language package 1 |
| [22] | English US | Part of language package 4 |
| [27] | Greek | Part of language package 4 |
| [28] | Bras.port | Part of language package 4 |
| [36] | Slovenian | Part of language package 3 |
| [39] | Korean | Part of language package 2 |
| [40] | Japanese | Part of language package 2 |
| [41] | Turkish | Part of language package 4 |
| [42] | Trad.Chinese | Part of language package 2 |
| [43] | Bulgarian | Part of language package 3 |
| [44] | Srpski | Part of language package 3 |
| [45] | Romanian | Part of language package 3 |
| [46] | Magyar | Part of language package 3 |
| [47] | Czech | Part of language package 3 |
| [48] | Polski | Part of language package 4 |
| [49] | Russian | Part of language package 3 |
| [50] | Thai | Part of language package 2 |

| 0-01 Language | | |
|---------------|------------------|----------------------------|
| Option: | Function: | |
| [51] | Bahasa Indonesia | Part of language package 2 |
| [52] | Hrvatski | Part of language package 3 |

| 0-02 Motor Speed Unit | | |
|-----------------------|-----------|---|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. The information shown in the display depends on settings in <i>parameter 0-02 Motor Speed Unit</i> and <i>parameter 0-03 Regional Settings</i> . The default settings of <i>parameter 0-02 Motor Speed Unit</i> and <i>parameter 0-03 Regional Settings</i> depend on to which region of the world the frequency converter is supplied. |
| [0] | RPM | Select to show motor speed variables and parameters using motor speed (RPM). |
| [1] * | Hz | Select to show motor speed variables and parameters using output frequency (Hz). |

| 0-03 Regional Settings | | |
|------------------------|---------------|--|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. |
| [0] * | International | Activates <i>parameter 1-20 Motor Power [kW]</i> for setting the motor power in kW and sets the default value of <i>parameter 1-23 Motor Frequency</i> to 50 Hz. |
| [1] | US | Activates <i>parameter 1-20 Motor Power [kW]</i> for setting the motor power in hp and sets the default value of <i>parameter 1-23 Motor Frequency</i> to 60 Hz. |

| 0-04 Operating State at Power-up (Hand) | | |
|---|-----------|--|
| Option: | Function: | |
| | | Selects the operating mode upon reconnection of the frequency converter to mains voltage after power down in hand on mode. |

| 0-04 Operating State at Power-up (Hand) | | |
|---|----------------------|---|
| Option: | | Function: |
| [0] | Resume | Restarts the frequency converter, maintaining the start/stop settings (applied by [Hand On/Off]) selected before the power-down of the frequency converter. |
| [1] * | Forced stop, ref=old | Restarts the frequency converter with a saved local reference after mains voltage reappears and after pressing [Hand On]. |
| [2] | Forced stop, ref=0 | Resets the local reference to 0 upon restarting the frequency converter. |

| 0-09 Performance Monitor | | |
|--------------------------|-------------|-----------|
| Range: | | Function: |
| 0 %* | [0 - 100 %] | |

3.2.2 0-1* Set-up Operations

Define and control the individual parameter set-ups. The frequency converter has 4 parameter set-ups that can be programmed independently of each other. This makes the frequency converter very flexible and able to solve advanced control functionality problems, often saving the cost of external control equipment. Parameter set-ups these can be used to program the frequency converter to operate according to one control scheme in 1 set-up (for example motor 1 for horizontal movement) and another control scheme in another set-up (for example motor 2 for vertical movement). Alternatively, parameter set-ups can be used by an OEM machine builder to identically program all their factory-fitted frequency converters for different machine types within a range to have the same parameters. During production/commissioning, simply select a specific set-up depending on which machine the frequency converter is installed on.

The active set-up (that is the set-up in which the frequency converter is currently operating) can be selected in *parameter 0-10 Active Set-up* and is shown in the LCP. By using multi set-up, it is possible to switch between set-ups with the frequency converter running or stopped via digital input or serial communication commands. If it is necessary to change set-ups while running, ensure *parameter 0-12 This Set-up Linked to* is programmed as required. By using *parameter 0-11 Edit Set-up*, it is possible to edit parameters within any of the set-ups while continuing the operation of the frequency converter in its active set-up, which can be a different set-up to the one being edited. By using *parameter 0-51 Set-up Copy*, it is possible to copy parameter settings between the set-ups to enable quicker commissioning if similar parameter settings are required in different set-ups.

| 0-10 Active Set-up | | |
|--------------------|---------------|---|
| Option: | | Function: |
| | | Select the set-up to control the frequency converter functions. |
| [0] | Factory setup | Cannot be changed. It contains the Danfoss data set and can be used as a data source when returning the other set-ups to a known state. |
| [1] * | Set-up 1 | [1] Set-up 1 to [4] Set-up 4 are the 4 separate parameter set-ups within which all parameters can be programmed. |
| [2] | Set-up 2 | |
| [3] | Set-up 3 | |
| [4] | Set-up 4 | |
| [9] | Multi Set-up | Remote set-up selections using digital inputs and the serial communication port. This set-up uses the settings from <i>parameter 0-12 This Set-up Linked to</i> . Stop the frequency converter before making changes to open and closed loop functions. |

Use *parameter 0-51 Set-up Copy* to copy a set-up to 1 or all other set-ups. Stop the frequency converter before switching between set-ups where parameters marked *not changeable during operation* have different values. To avoid conflicting settings of the same parameter within 2 different set-ups, link the set-ups together using *parameter 0-12 This Set-up Linked to*. Parameters which are *not changeable during operation* are marked FALSE in the parameter lists in *chapter 4 Parameter Lists*.

| 0-11 Edit Set-up | | |
|------------------|---------------|--|
| Option: | | Function: |
| | | Select the set-up to be edited (that is programmed) during operation; either the active set-up or 1 of the inactive set-ups. |
| [0] | Factory setup | Cannot be edited but it is useful as a data source to return the other set-ups to a known state. |
| [1] * | Set-up 1 | [1] Set-up 1 to [4] Set-up 4 can be edited freely during operation, independently of the active set-up. |
| [2] | Set-up 2 | |
| [3] | Set-up 3 | |
| [4] | Set-up 4 | |
| [9] | Active Set-up | Can also be edited during operation. Edit the selected set-up from a range of sources: LCP, FC RS485, FC USB, or up to 5 fieldbus sites. |

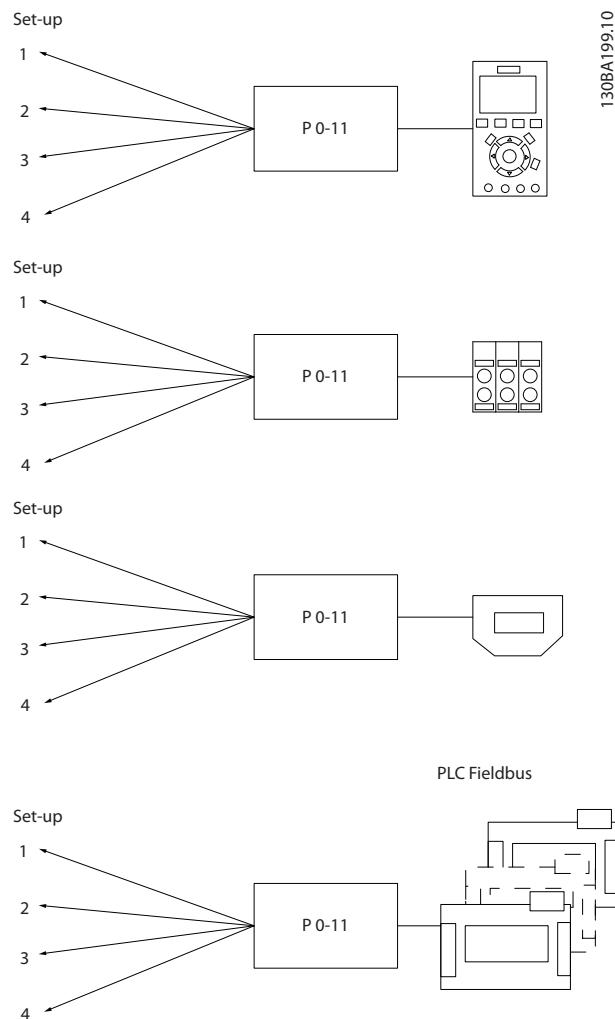

Illustration 3.1 Edit Set-up

| 0-12 This Set-up Linked to | |
|----------------------------|--|
| Option: | Function: |
| | <p>To enable conflict-free changes from 1 set-up to another during operation, link set-ups containing parameters which are not changeable during operation. The link ensures synchronizing of the <i>not changeable during operation</i>-parameter values when moving from 1 set-up to another during operation. <i>Not changeable during operation</i>-parameters can be identified by the label FALSE in the parameter lists in chapter 4 Parameter Lists.</p> <p>Parameter 0-12 This Set-up Linked to is used by [9] Multi set-up in parameter 0-10 Active Set-up. Multi set-up is used to move from 1 set-up to another during operation (that is while the motor runs).</p> <p>Example: Use multi set-up to shift from set-up 1 to Set-up 2 while the motor runs. Program in set-up 1 first, then ensure that set-up 1 and set-up 2 are</p> |

0-12 This Set-up Linked to**Option:****Function:**

synchronized (or linked). Synchronization can be performed in 2 ways:

1. Change the edit set-up to [2] Set-up 2 in parameter 0-11 Edit Set-up and set parameter 0-12 This Set-up Linked to to [1] Set-up 1. This starts the linking (synchronizing) process.

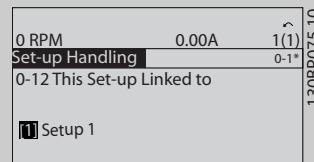

Illustration 3.2 Set-up 1

OR

2. While still in set-up 1, copy set-up 1 to set-up 2. Then set parameter 0-12 This Set-up Linked to to [2] Set-up 2. This starts the linking process.

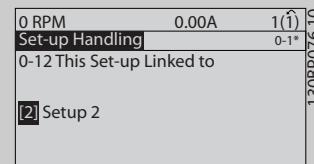

Illustration 3.3 Set-up 2

When completed, parameter 0-13 Readout: Linked Set-ups reads {1,2} to indicate that all *not changeable during operation* parameters are now the same in set-up 1 and set-up 2. If there are changes to a *not changeable during operation* parameter, for example parameter 1-30 Stator Resistance (R_s), in set-up 2, they are also changed automatically in set-up 1. A switch between set-up 1 and set-up 2 during operation is now possible.

| | |

| | | out limit is 95 ± 5 °C; cutting back in occurs at 70 ± 5 °C. |
| [1635] | Inverter Thermal | Percentage load of the inverters. |
| [1636] | Inv. Nom. Current | Nominal current of the frequency converter. |
| [1637] | Inv. Max. Current | Maximum current of the frequency converter. |
| [1638] | SL Controller State | State of the event executed by the control. |
| [1639] | Control Card Temp. | Temperature of the control card. |
| [1644] | Speed Error [RPM] | |
| [1645] | Motor Phase U Current | |
| [1646] | Motor Phase V Current | |
| [1647] | Motor Phase W Current | |
| [1648] | Speed Ref. After Ramp [RPM] | |
| [1650] | External Reference | Sum of the external reference as a percentage, that is the sum of analog/pulse/bus. |
| [1651] | Pulse Reference | Frequency in Hz connected to the digital inputs (18, 19 or 32, 33). |
| [1652] | Feedback[Unit] | Reference value from programmed digital inputs. |
| [1653] | Digi Pot Reference | |
| [1657] | Feedback [RPM] | |
| [1660] | Digital Input | Signal states from the 6 digital terminals (18, 19, 27, 29, 32, and 33). There are 16 bits in total, but only 6 of them are used. Input 18 corresponds to the far left of the used bits. Signal low = 0; Signal high = 1. |
| [1661] | Terminal 53 Switch Setting | Setting of input terminal 54. Current = 0; Voltage = 1. |
| [1662] | Analog Input 53 | Actual value at input 53 either as a reference or protection value. |
| [1663] | Terminal 54 Switch Setting | Setting of input terminal 54. Current = 0; Voltage = 1. |
| [1664] | Analog Input 54 | Actual value at input 54 either as reference or protection value. |
| [1665] | Analog Output 42 [mA] | Actual value at output 42 in mA. Use parameter 6-50 Terminal 42 Output to select the value to be shown. |
| [1666] | Digital Output [bin] | Binary value of all digital outputs. |

| 0-20 Display Line 1.1 Small | | |
|-----------------------------|---------------------------------|---|
| Option: | Function: | |
| [1667] | Freq. Input #29 [Hz] | Actual value of the frequency applied at terminal 29 as an impulse input. |
| [1668] | Freq. Input #33 [Hz] | Actual value of the frequency applied at terminal 33 as an impulse input. |
| [1669] | Pulse Output #27 [Hz] | Actual value of impulses applied to terminal 27 in digital output mode. |
| [1670] | Pulse Output #29 [Hz] | Actual value of impulses applied to terminal 29 in digital output mode. |
| [1671] | Relay Output [bin] | |
| [1672] | Counter A | Application dependent (for example SLC control). |
| [1673] | Counter B | Application dependent (for example SLC control). |
| [1674] | Prec. Stop Counter | Shows the actual value of the counter. |
| [1675] | Analog In X30/11 | Actual value at input X30/11 either as reference or protection value. |
| [1676] | Analog In X30/12 | Actual value at input X30/12 either as reference or protection value. |
| [1677] | Analog Out X30/8 [mA] | Actual value at output X30/8 in mA. Use parameter 6-60 Terminal X30/8 Output to select the value to be shown. |
| [1678] | Analog Out X45/1 [mA] | |
| [1679] | Analog Out X45/3 [mA] | |

Select a variable for display in line 3.

0-25 My Personal Menu

| Range: | Function: |
|--------------------------|--|
| Size related* [0 - 9999] | Define up to 50 parameters to appear in the <i>Q1 Personal Menu</i> , accessible via the [Quick Menu] key on the LCP. The parameters are displayed in the <i>Q1 Personal Menu</i> in the order they are programmed into this array parameter. Delete parameters by setting the value to '0000'. For example, this can be used to provide quick, simple access to just 1 or up to 50 parameters which require changing on a regular basis (e.g. for plant maintenance reasons) or by an OEM to enable simple commissioning of their equipment. |

3.2.4 0-3* LCP Custom Readout

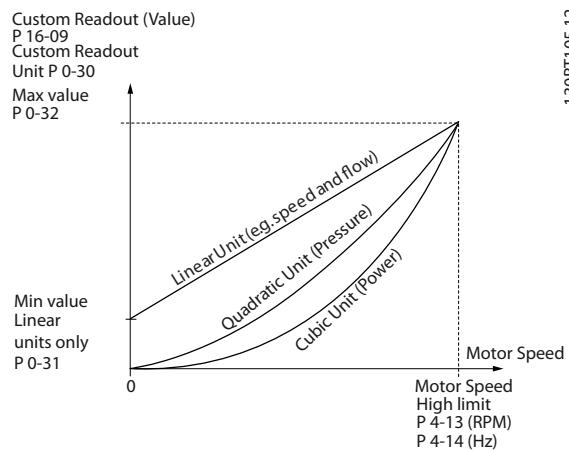

It is possible to customize the display elements for various purposes:

- Custom readout. Value proportional to speed (linear, squared, or cubed depending on unit selected in *parameter 0-30 Custom Readout Unit*).
- Display text. Text string stored in a parameter.

Custom readout

The calculated value to be shown is based on the settings in:

- Parameter 0-30 Custom Readout Unit*.
- Parameter 0-31 Custom Readout Min Value* (linear only).
- Parameter 0-32 Custom Readout Max Value*.
- Parameter 4-13 Motor Speed High Limit [RPM]*.
- Parameter 4-14 Motor Speed High Limit [Hz]*.
- Actual speed.

**Illustration 3.4 Custom Readout**

The relation depends on the type of unit selected in *parameter 0-30 Custom Readout Unit*:

| Unit type | Speed relation |
|---------------|----------------|
| Dimensionless | Linear |
| Speed | |
| Flow, volume | |
| Flow, mass | |
| Velocity | |
| Length | |
| Temperature | Quadratic |
| Pressure | |
| Power | Cubic |

Table 3.2 Speed Relations for Different Unit Types**0-30 Unit for User-defined Readout**

| Option: | Function: |
|---------|---|
| [0] * | It is possible to program a value to be shown in the display of the LCP. The value has a linear, squared, or cubed relation to speed. This relation depends on the unit selected (see <i>Table 3.2</i>). The actual calculated value can be read in <i>parameter 16-09 Custom Readout</i> , and/or shown in the display by selecting [16-09] <i>Custom Readout</i> in <i>parameter 0-20 Display Line 1.1 Small</i> to <i>parameter 0-24 Display Line 3 Large</i> . |

| 0-31 Min Value of User-defined Readout | | |
|--|--|---|
| Range: | Function: | |
| 0 CustomReadoutUnit* | [-999999.99 - par. 0-32 CustomReadoutUnit] | This parameter sets the min. value of the custom-defined readout (occurs at zero speed). Only possible to set different from 0 when selecting a linear unit in parameter 0-30 Unit for User-defined Readout. For quadratic and cubic units, the minimum value is 0. |

| 0-32 Custom Readout Max Value | | |
|-------------------------------|--|--|
| Range: | Function: | |
| 100 CustomReadoutUnit* | [par. 0-31 - 999999.99 CustomReadoutUnit] | This parameter sets the maximum value to be shown when the speed of the motor has reached the set value for parameter 4-13 Motor Speed High Limit [RPM] or parameter 4-14 Motor Speed High Limit [Hz] (depends on setting in parameter 0-02 Motor Speed Unit). |

| 0-37 Display Text 1 | | |
|---------------------|---|--|
| Range: | Function: | |
| 0* [0 - 25] | Enter a text which can be viewed in the graphical display by selecting [37] Display Text 1 in <ul style="list-style-type: none"> Parameter 0-20 Display Line 1.1 Small, Parameter 0-21 Display Line 1.2 Small, Parameter 0-22 Display Line 1.3 Small, Parameter 0-23 Display Line 2 Large, or Parameter 0-24 Display Line 3 Large. | |

| 0-38 Display Text 2 | | |
|---------------------|---|--|
| Range: | Function: | |
| 0* [0 - 25] | Enter a text which can be viewed in the graphical display by selecting [38] Display Text 2 in <ul style="list-style-type: none"> parameter 0-20 Display Line 1.1 Small, parameter 0-21 Display Line 1.2 Small, parameter 0-22 Display Line 1.3 Small, parameter 0-23 Display Line 2 Large, or parameter 0-24 Display Line 3 Large. | |

| 0-39 Display Text 3 | | |
|---------------------|---|--|
| Range: | Function: | |
| 0* [0 - 25] | Enter a text which can be viewed in the graphical display by selecting [39] Display Text 3 in <ul style="list-style-type: none"> parameter 0-20 Display Line 1.1 Small, parameter 0-21 Display Line 1.2 Small, parameter 0-22 Display Line 1.3 Small, parameter 0-23 Display Line 2 Large, or parameter 0-24 Display Line 3 Large. | |

3.2.5 0-4* LCP Keypad

Enable, disable, and password protect individual keys on the LCP.

| 0-40 [Hand on] Key on LCP | | |
|---------------------------|---|--|
| Option: | Function: | |
| [0] Disabled | No effect when [Hand On] is pressed. Select [0] <i>Disabled</i> to avoid accidental start of the frequency converter in <i>Hand on</i> mode. | |
| [1] Enabled | The LCP switches to <i>Hand on</i> mode directly when [Hand on] is pressed. | |
| [2] Password | After pressing [Hand on] a password is required. If parameter 0-40 [Hand on] Key on LCP is included in <i>My Personal Menu</i> , define the password in parameter 0-65 Quick Menu Password. Otherwise define the password in parameter 0-60 Main Menu Password. | |
| [3] Hand Off/On | When [Hand On] is pressed once, the LCP switches to <i>Off</i> mode. When pressed again, the LCP switches to <i>Hand on</i> mode. | |
| [4] Hand Off/On w. Passw. | Same as [3] but a password is required (see option [2] <i>Password</i>). | |
| [9] Enabled, ref = 0 | | |

| 0-41 [Off] Key on LCP | | |
|-----------------------|---|--|
| Option: | Function: | |
| [0] Disabled | Avoids accidental stop of the frequency converter. | |
| [1] Enabled | | |
| [2] Password | Avoids unauthorized stop. If parameter 0-41 [Off] Key on LCP is included in the <i>Quick Menu</i> , then define the password in parameter 0-65 Quick Menu Password. | |

| 0-42 [Auto on] Key on LCP | | |
|---------------------------|---|--|
| Option: | Function: | |
| [0] Disabled | Avoids accidental start of the frequency converter in <i>Auto On</i> mode. | |
| [1] Enabled | | |
| [2] Password | Avoids unauthorized start in <i>Auto On</i> mode. If parameter 0-42 [Auto on] Key on LCP is included in the <i>Quick Menu</i> , then define the password in parameter 0-65 Quick Menu Password. | |

| 0-43 [Reset] Key on LCP | | |
|-------------------------|--|--|
| Option: | Function: | |
| [0] Disabled | No effect when [Reset] is pressed. Avoids accidental alarm reset. | |
| [1] Enabled | | |
| [2] Password | Avoids unauthorized resetting. If parameter 0-43 [Reset] Key on LCP is included in the <i>Quick Menu</i> , then define the password in parameter 0-65 Quick Menu Password. | |
| [7] Enabled without OFF | Resets the frequency converter without setting it in <i>Off</i> mode. | |

| 0-43 [Reset] Key on LCP | | |
|--------------------------|---|--|
| Option: | Function: | |
| [8] Password without OFF | Resets the frequency converter without setting it in <i>Off</i> mode. A password is required when pressing [Reset] (see option [2] <i>Password</i>). | |

| 0-44 [Off/Reset] Key on LCP | | |
|-----------------------------|--|--|
| Option: | Function: | |
| [0] Disabled | Enable or disable the [Off/Reset] key. | |
| [1] Enabled | | |
| [2] Password | | |

| 0-45 [Drive Bypass] Key on LCP | | |
|--------------------------------|---|----------------------------|
| Option: | Function: | |
| [0] Disabled | Press [Off] and select [0] <i>Disabled</i> to avoid unintended stop of the frequency converter. | Select to disable the key. |
| [1] Enabled | | |
| [2] Password | | |

3.2.6 0-5* Copy/Save

Copy parameters from and to the LCP. Use these parameters for saving and copying set-ups from 1 frequency converter to another.

| 0-50 LCP Copy | | |
|--------------------------|---|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. | |
| [0] * No copy | | |
| [1] All to LCP | Copies all parameters in all set-ups from the frequency converter memory to the LCP memory. | |
| [2] All from LCP | Copies all parameters in all set-ups from the LCP memory to the frequency converter memory. | |
| [3] Size indep. from LCP | Copy only the parameters that are independent of the motor size. The latter selection can be used to program several frequency converters with the same function without disturbing motor data. | |

| 0-50 LCP Copy | | |
|---------------|----------------------|--|
| Option: | | Function: |
| [4] | File from MCO to LCP | |
| [5] | File from LCP to MCO | |
| [6] | Data from DYN to LCP | |
| [7] | Data from LCP to DYN | |
| [9] | Safety Par. from LCP | |
| [10] | Delete LCP copy data | Use to delete the copy after the transfer is complete. |

| 0-61 Access to Main Menu w/o Password | | |
|---------------------------------------|----------------|---|
| Option: | | Function: |
| [3] | Bus: Read only | Read-only functions for parameters on fieldbus and/or FC standard bus. |
| [4] | Bus: No access | No access to parameters is allowed via fieldbus and/or FC standard bus. |
| [5] | All: Read only | Read-only function for parameters on LCP, fieldbus, or FC standard bus. |
| [6] | All: No access | No access from LCP, fieldbus, or FC standard bus is allowed. |

If [0] *Full access* is selected, parameter 0-60 Main Menu Password, parameter 0-65 Personal Menu Password, and parameter 0-66 Access to Personal Menu w/o Password are ignored.

NOTICE

A more complex password protection is available for OEMs upon request.

| 0-51 Set-up Copy | | |
|------------------|------------------|---|
| Option: | | Function: |
| [0] * | No copy | No function. |
| [1] | Copy to set-up 1 | Copies all parameters in the present programming set-up (defined in parameter 0-11 Programming Set-up) to set-up 1. |
| [2] | Copy to set-up 2 | Copies all parameters in the present programming set-up (defined in parameter 0-11 Programming Set-up) to set-up 2. |
| [3] | Copy to set-up 3 | Copies all parameters in the present programming set-up (defined in parameter 0-11 Programming Set-up) to set-up 3. |
| [4] | Copy to set-up 4 | Copies all parameters in the present programming set-up (defined in parameter 0-11 Programming Set-up) to set-up 4. |
| [9] | Copy to all | Copies the parameters in the present set-up to each of the set-ups 1 to 4. |

0-65 Quick Menu Password

| Range: Function: | | |
|------------------|------------------|--|
| 200* | [-9999 - 9999] | Define the password for access to the Quick Menu via the [Quick Menu] key. If parameter 0-66 Access to Quick Menu w/o Password is set to [0] <i>Full access</i> , this parameter is ignored. |

0-66 Access to Quick Menu w/o Password

If parameter 0-61 Access to Main Menu w/o Password is set to [0] *Full access* then this parameter is ignored.

| Option: Function: | | |
|-------------------|----------------|---|
| [0] * | Full access | Disables the password defined in parameter 0-65 Quick Menu Password. |
| [1] | LCP: Read only | Prevents unauthorised editing of Quick Menu parameters. |
| [3] | Bus: Read only | Read-only functions for Quick Menu parameters on fieldbus and/or FC standard bus. |
| [5] | All: Read only | Read-only function for Quick Menu parameters on LCP, fieldbus, or frequency converter standard bus. |

0-67 Bus Password Access

| Range: Function: | | |
|------------------|--------------|--|
| 0* | [0 - 9999] | Use this parameter to unlock the frequency converter via fieldbus or MCT 10 Set-up Software. |

0-68 Safety Parameters Password

| Range: Function: | | |
|------------------|--------------|--|
| 300* | [0 - 9999] | |

3.2.7 0-6* Password

| 0-60 Main Menu Password | | |
|-------------------------|------------------|---|
| Range: | | Function: |
| 100* | [-9999 - 9999] | Define the password for access to the Main Menu via the [Main Menu] key. If parameter 0-61 Access to Main Menu w/o Password is set to [0] <i>Full access</i> , this parameter is ignored. |

| 0-61 Access to Main Menu w/o Password | | |
|---------------------------------------|----------------|---|
| Option: | | Function: |
| [0] * | Full access | Disables password defined in parameter 0-60 Main Menu Password. |
| [1] | LCP: Read only | Prevent unauthorised editing of Main Menu parameters. |
| [2] | LCP: No access | Prevent unauthorised viewing and editing of Main Menu parameters. |

| 0-69 Password Protection of Safety Parameters | | |
|---|----------|-----------|
| Option: | | Function: |
| [0] * | Disabled | |
| [1] | Enabled | |

3.3 Parameters: 1-** Load and Motor

3.3.1 1-0* General Settings

Define whether the frequency converter operates in speed mode or torque mode, and whether the internal PID control should be active or not.

| 1-00 Configuration Mode | | |
|-------------------------|--|--|
| Option: | Function: | |
| | Select the application control principle to be used when a remote reference (that is via analog input or fieldbus) is active. A remote reference can only be active when parameter 3-13 Reference Site is set to [0] Linked to Hand/Auto or [1] Remote. | |
| [0] | Speed open loop Enables speed control (without feedback signal from motor) with automatic slip compensation for almost constant speed at varying loads. Compensations are active, but can be disabled in parameter group 1-0* Load/Motor. Set the speed control parameters in parameter group 7-0* Speed PID Ctrl. | |
| [1] | Speed closed loop Enables speed closed-loop control with feedback. Obtain full holding torque at 0 RPM. For increased speed accuracy, provide a feedback signal and set the speed PID control. Set the speed control parameters in parameter group 7-0* Speed PID Ctrl. | |
| [2] | Torque Enables torque closed-loop control with feedback. Only possible with <i>Flux with motor feedback</i> option, parameter 1-01 Motor Control Principle. NOTICE This is valid for FC 302 only. | |
| [3] | Process Enables the use of process control in the frequency converter. Set the process control parameters in parameter groups 7-2* Process Ctrl. Feedb. and 7-3* Process PID Ctrl. | |
| [4] | Torque open loop Enables the use of torque open loop in VVC+ mode (parameter 1-01 Motor Control Principle). Set the torque PID parameters in parameter group 7-1* Torque PI Control. | |
| [5] | Wobble Enables the wobble functionality in parameter 30-00 Wobble Mode to parameter 30-19 Wobble Delta Freq. Scaled. | |
| [6] | Surface Winder Enables the surface winder control specific parameters in parameter group 7-2* Process Ctrl. Feedb. and 7-3* Process PID Ctrl. | |

| 1-00 Configuration Mode | | |
|-------------------------|-----------------------|---|
| Option: | Function: | |
| [7] | Extended PID Speed OL | Specific parameters in parameter group 7-2* Process Ctrl. Feedb. to 7-5* Ext. Process PID Ctrl. |
| [8] | Extended PID Speed CL | Specific parameters in parameter group 7-2* Process Ctrl. Feedb. to 7-5* Ext. Process PID Ctrl. |
| [9] | Positioning | Activates the positioning mode. |
| [10] | Synchronization | Activates the synchronization mode. |

| 1-01 Motor Control Principle | | |
|------------------------------|---------------------|---|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. |
| | | Select which motor control principle to employ. |
| [0] | U/f | Special motor mode, for parallel connected motors in special motor applications. When U/f is selected the characteristic of the control principle can be edited in parameter 1-55 U/f Characteristic - U and parameter 1-56 U/f Characteristic - F. |
| [1] | VVC+ | Voltage vector control principle is suitable for most applications. The main benefit of VVC+ operation is that it uses a robust motor model. |
| [2] | Flux sensorless | Flux vector control without encoder feedback, for simple installation and robustness against sudden load changes. |
| [3] | Flux w/ motor feedb | NOTICE This is valid for FC 302 only. High accuracy speed and torque control, suitable for the most demanding applications. |

The best shaft performance is normally achieved using either of the 2 flux vector control modes [2] Flux sensorless and [3] Flux with encoder feedback.

NOTICE

An overview of possible combinations of the settings in parameter 1-00 Configuration Mode and parameter 1-01 Motor Control Principle can be found in chapter 4.1.3 Active/Inactive Parameters in Different Control Modes.

| 1-02 Flux Motor Feedback Source | | |
|---------------------------------|--|---|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. Select the interface for which to receive feedback from the motor. | |
| [1] * | 24V encoder | A and B channel encoder, which can be connected to the digital input terminals 32/33 only. Program Terminals 32/33 to <i>No operation</i> . |
| [2] | MCB 102 | Encoder module option, which can be configured in parameter group 17-1* <i>Inc. Enc. Interface</i> . NOTICE This is valid for FC 302 only. |
| [3] | MCB 103 | Optional resolver interface module, which can be configured in parameter group 17-5* <i>Resolver Interface</i> . |
| [4] | MCO Encoder 1 X56 | Encoder interface 1 of the optional VLT® Motion Control MCO 305. |
| [5] | MCO Encoder 2 X55 | Encoder interface 2 of the optional VLT® Motion Control MCO 305. |

| 1-03 Torque Characteristics | | |
|-----------------------------|--|--|
| Option: | Function: | |
| | NOTICE mode, due to the high DC-link voltage available in generator mode. $P_{\text{shaft}}[W] = \omega_{\text{mech}}[\text{rad/s}] \times T[\text{Nm}]$ This relationship with the constant power is illustrated in <i>Illustration 3.5</i> : | |

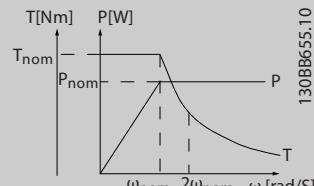

Illustration 3.5 Constant Power

| 1-04 Overload Mode | | |
|--------------------|--|---|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. | |
| [0] * | High torque | Use this parameter to configure the frequency converter for either high or normal overload. When selecting the frequency converter size, always review the technical data in the <i>operating instructions</i> or the <i>design guide</i> to know the available output current. |
| [1] | Normal torque | Allows up to 160% over torque. |
| | | For oversized motor - allows up to 110% over torque. |

| 1-05 Local Mode Configuration | | |
|-------------------------------|--|--|
| Option: | Function: | |
| | Select which application configuration mode (<i>parameter 1-00 Configuration Mode</i>), that is application control principle, to use when a local (LCP) reference is active. A local reference can be active only when <i>parameter 3-13 Reference Site</i> is set to [0] <i>Linked to Hand/Auto</i> or [2] <i>Local</i> . By default the local reference is active in local mode only. | |
| [0] | Speed open loop | |
| [1] | Speed Closed Loop | |
| [2] * | As mode par 1-00 | |
| [4] | Positioning | |

| 1-06 Clockwise Direction | | |
|--------------------------|---------|---|
| Option: | | Function: |
| | | <p>NOTICE</p> <p>This parameter cannot be adjusted while the motor is running.</p> <p>This parameter defines the term <i>clockwise</i> corresponding to the LCP direction arrow. Used for easy change of direction of shaft rotation without swapping motor wires.</p> |
| [0] * | Normal | The motor shaft turns in clockwise direction when the frequency converter is connected U⇒U, V⇒V, and W⇒W to the motor. |
| [1] | Inverse | Motor shaft turns in counterclockwise direction when the frequency converter is connected U⇒U, V⇒V, and W⇒W to the motor. |

| 1-07 Motor Angle Offset Adjust | | |
|--------------------------------|------------------|---|
| Range: | | Function: |
| | | <p>NOTICE</p> <p>This parameter is only valid for FC 302 and only in combination with a PM motor with feedback.</p> |
| 0* | [Manual] | The functionality of this option depends on the type of the feedback device. This option sets the frequency converter to use the motor angle offset entered in <i>parameter 1-41 Motor Angle Offset</i> , if an absolute feedback device is used. If an incremental feedback device is selected, the frequency converter automatically adjusts the motor angle offset on the first start after power-up, or when the motor data is changed. |
| [1] | Auto | The frequency converter adjusts the motor angle offset automatically on the first start after power-up, or when the motor data is changed no matter what feedback device is selected. This means that options <i>Manual</i> and <i>Auto</i> are identical for the incremental encoder. |
| [2] | Auto Every Start | The frequency converter adjusts the motor angle offset automatically on every start, or when the motor data is changed. |
| [3] | Off | Selecting this option turns the automatic offset adjustment off. |
| [4] | Once with Store | This option updates <i>parameter 1-41 Motor Angle Offset</i> automatically when the angle value is 0. Only for absolute feedback devices. The function uses rotor detection and then applies DC hold to make the offset adjustment more accurate. |

3.3.2 1-1* Special Settings

NOTICE

The parameters within this parameter group cannot be adjusted while the motor is running.

3.3.3 Asynchronous Motor Set-up

Enter the following motor data. Find the information on the motor nameplate.

1. *Parameter 1-20 Motor Power [kW]* or *parameter 1-21 Motor Power [HP]*.
2. *Parameter 1-22 Motor Voltage*.
3. *Parameter 1-23 Motor Frequency*.
4. *Parameter 1-24 Motor Current*.
5. *Parameter 1-25 Motor Nominal Speed*.

When running in flux control principle, or for optimum performance in VVC⁺ mode, extra motor data is required to set up the following parameters. Find the data in the motor datasheet (this data is typically not available on the motor nameplate). Run a complete automatic motor adaptation (AMA) using *parameter 1-29 Automatic Motor Adaptation (AMA)* [1] *Enable Complete AMA* or enter the parameters manually. *Parameter 1-36 Iron Loss Resistance (Rfe)* is always entered manually.

1. *Parameter 1-30 Stator Resistance (Rs)*.
2. *Parameter 1-31 Rotor Resistance (Rr)*.
3. *Parameter 1-33 Stator Leakage Reactance (X1)*.
4. *Parameter 1-34 Rotor Leakage Reactance (X2)*.
5. *Parameter 1-35 Main Reactance (Xh)*.
6. *Parameter 1-36 Iron Loss Resistance (Rfe)*.

Application-specific adjustment when running VVC⁺
VVC⁺ is the most robust control mode. In most situations, it provides optimum performance without further adjustments. Run a complete AMA for best performance.

Application-specific adjustment when running flux
Flux control principle is the preferred control principle for optimum shaft performance in dynamic applications. Perform an AMA since this control mode requires precise motor data. Depending on the application, further adjustments may be required.

See *Table 3.3* for application-related recommendations.

| Application | Settings |
|--|---|
| Low-inertia applications | Keep calculated values. |
| High-inertia applications | <p><i>Parameter 1-66 Min. Current at Low Speed.</i> Increase current to a value between default and maximum depending on the application. Set ramp times matching the application. Too fast ramp up causes an overcurrent or overtorque. Too fast ramp down causes an overvoltage trip.</p> |
| High load at low speed | <p><i>Parameter 1-66 Min. Current at Low Speed.</i> Increase current to a value between default and maximum depending on the application.</p> |
| No-load application | Adjust <i>parameter 1-18 Min. Current at No Load</i> to achieve smoother motor operation by reducing torque ripple and vibration. |
| Flux Sensorless control principle only | <p>Adjust <i>parameter 1-53 Model Shift Frequency</i>. Example 1: If the motor oscillates at 5 Hz, and dynamics performance is required at 15 Hz, set <i>parameter 1-53 Model Shift Frequency</i> to 10 Hz. Example 2: If the application involves dynamic load changes at low speed, reduce <i>parameter 1-53 Model Shift Frequency</i>. Observe the motor behavior to make sure that the model shift frequency is not reduced too much. Symptoms of inappropriate model shift frequency are motor oscillations or frequency converter tripping.</p> |

Table 3.3 Recommendations for Flux Applications

3.3.4 PM Motor Set-up

NOTICE

Valid for FC 302 only.

This section describes how to set up a PM motor.

Initial programming steps

To activate PM motor operation, select [1] *PM, non-salient SPM* in *parameter 1-10 Motor Construction*.

Programming motor data

After selecting a PM motor, the PM motor-related parameters in parameter groups *1-2* Motor Data*, *1-3* Adv. Motor Data*, and *1-4* Adv. Motor Data II* are active.

The necessary data can be found on the motor nameplate and on the motor datasheet.

Program the following parameters in the order listed:

1. *Parameter 1-24 Motor Current*.
2. *Parameter 1-25 Motor Nominal Speed*.
3. *Parameter 1-26 Motor Cont. Rated Torque*.
4. *Parameter 1-39 Motor Poles*.

Run a complete AMA using *parameter 1-29 Automatic Motor Adaptation (AMA)* [1] *Enable Complete AMA*.

If a complete AMA is not performed, configure the following parameters manually:

1. *Parameter 1-30 Stator Resistance (Rs)*
Enter the line-to-common stator winding resistance (Rs). If only line-line data is available, divide the line-line value by 2 to get the line-common value.
2. *Parameter 1-37 d-axis Inductance (Ld)*
Enter the line-to-common direct axis inductance of the PM motor.
If only line-line data is available, divide the line-line value by 2 to get the line-common value.
3. *Parameter 1-40 Back EMF at 1000 RPM*.
Enter the line-to-line back EMF of the PM Motor at 1000 RPM (RMS value). Back EMF is the voltage generated by a PM motor when no frequency converter is connected and the shaft is turned externally. It is normally specified for nominal motor speed or for 1000 RPM measured between 2 lines. If the value is not available for a motor speed of 1000 RPM, calculate the correct value as follows:
If back EMF is, for example, 320 V at 1800 RPM, it can be calculated at 1000 RPM as follows:
Back EMF = (Voltage/RPM)x1000 = (320/1800)x1000 = 178.

Test motor operation

1. Start the motor at low speed (100–200 RPM). If the motor does not turn, check the installation, general programming, and motor data.
2. Check if the start function in *parameter 1-70 PM Start Mode* fits the application requirements.

Rotor detection

This function is the recommended selection for applications where the motor starts from standstill, for example pumps or conveyors. On some motors, a sound is heard when the frequency converter performs the rotor detection. This does not harm the motor.

Parking

This function is the recommended selection for applications where the motor is rotating at slow speed, for example windmilling in fan applications.

Parameter 2-06 Parking Current and *parameter 2-07 Parking*

Time can be adjusted. Increase the factory setting of these parameters for applications with high inertia.

Application-specific adjustment when running VVC⁺
VVC⁺ is the most robust control mode. In most situations, it provides optimum performance without further adjustments. Run a complete AMA for best performance.

Start the motor at nominal speed. If the application does not run well, check the VVC⁺ PM settings. *Table 3.4* contains recommendations for various applications.

| Application | Settings |
|---|--|
| Low-inertia applications $I_{Load}/I_{Motor} < 5$ | Increase parameter 1-17 Voltage filter time const. by factor 5–10. Reduce parameter 1-14 Damping Gain. Reduce parameter 1-66 Min. Current at Low Speed (<100%). |
| Low-inertia applications $50 > I_{Load}/I_{Motor} > 5$ | Keep the default values. |
| High-inertia applications $I_{Load}/I_{Motor} > 50$ | Increase parameter 1-14 Damping Gain, parameter 1-15 Low Speed Filter Time Const., and parameter 1-16 High Speed Filter Time Const. |
| High load at low speed <30% (rated speed) | Increase parameter 1-17 Voltage filter time const. Increase parameter 1-66 Min. Current at Low Speed to adjust the starting torque. 100% current provides nominal torque as starting torque. This parameter is independent of parameter 30-20 High Starting Torque Time [s] and parameter 30-21 High Starting Torque Current [%]. Working at a current level higher than 100% for a prolonged time can cause the motor to overheat. |

Table 3.4 Recommendations for Various Applications

If the motor starts oscillating at a certain speed, increase parameter 1-14 Damping Gain. Increase the value in small steps. Depending on the motor, this parameter can be set to 10–100% higher than the default value.

Application-specific adjustment when running flux
Flux control principle is the preferred control principle for optimum shaft performance in dynamic applications. Perform an AMA because this control mode requires precise motor data. Depending on the application, further adjustments may be required.

See *chapter 3.3.3 Asynchronous Motor Set-up* for application-specific recommendations.

3.3.5 SynRM Motor Set-up with VVC⁺

This section describes how to set up a SynRM motor with VVC⁺.

NOTICE

The SmartStart wizard covers the basic configuration of SynRM motors.

Initial programming steps

To activate SynRM motor operation, select [5] Sync. Reluctance in parameter 1-10 Motor Construction.

Programming motor data

After performing the initial programming steps, the SynRM motor-related parameters in parameter groups 1-2* Motor Data, 1-3* Adv. Motor Data, and 1-4* Adv. Motor Data II are active.

Use the motor nameplate data and the motor datasheet to program the following parameters in the order listed:

1. Parameter 1-23 Motor Frequency.
2. Parameter 1-24 Motor Current.
3. Parameter 1-25 Motor Nominal Speed.
4. Parameter 1-26 Motor Cont. Rated Torque.

Run a complete AMA using parameter 1-29 Automatic Motor Adaptation (AMA) [1] Enable Complete AMA or enter the following parameters manually:

1. Parameter 1-30 Stator Resistance (Rs).
2. Parameter 1-37 d-axis Inductance (Ld).
3. Parameter 1-44 d-axis Inductance Sat. (LdSat).
4. Parameter 1-45 q-axis Inductance Sat. (LqSat).
5. Parameter 1-48 Inductance Sat. Point.

Application-specific adjustments

Start the motor at nominal speed. If the application does not run well, check the VVC⁺ SynRM settings. *Table 3.5* provides application-specific recommendations:

| Application | Settings |
|---|---|
| Low-inertia applications $I_{Load}/I_{Motor} < 5$ | Increase parameter 1-17 Voltage filter time const. by factor 5–10. Reduce parameter 1-14 Damping Gain. Reduce parameter 1-66 Min. Current at Low Speed (<100%). |
| Low-inertia applications $50 > I_{Load}/I_{Motor} > 5$ | Keep the default values. |
| High-inertia applications $I_{Load}/I_{Motor} > 50$ | Increase parameter 1-14 Damping Gain, parameter 1-15 Low Speed Filter Time Const., and parameter 1-16 High Speed Filter Time Const. |

| Application | Settings |
|---|---|
| High-load at low speed <30% (rated speed) | Increase parameter 1-17 <i>Voltage filter time const.</i> Increase parameter 1-66 <i>Min. Current at Low Speed</i> to adjust the starting torque. 100% current provides nominal torque as starting torque. This parameter is independent of parameter 30-20 <i>High Starting Torque Time [s]</i> and parameter 30-21 <i>High Starting Torque Current [%]</i> . Working at a current level higher than 100% for a prolonged time can cause the motor to overheat. |
| Dynamic applications | Increase parameter 14-41 <i>AEO Minimum Magnetisation</i> for highly dynamic applications. Adjusting parameter 14-41 <i>AEO Minimum Magnetisation</i> ensures a good balance between energy efficiency and dynamics. Adjust parameter 14-42 <i>Minimum AEO Frequency</i> to specify the minimum frequency at which the frequency converter should use minimum magnetization. |
| Motor sizes less than 18 kW | Avoid short ramp-down times. |

Table 3.5 Recommendations for Various Applications

If the motor starts oscillating at a certain speed, increase parameter 1-14 *Damping Gain*. Increase the damping gain value in small steps. Depending on the motor, this parameter can be set to 10–100% higher than the default value.

| 1-10 Motor Construction | | |
|-------------------------|---|--|
| Option: | Function: | |
| [0] * | Select the motor design type. | |
| [0] Asynchron | Use for asynchronous motors. | |
| [1] PM, non salient SPM | Use for salient or non-salient PM motors. PM motors are divided into 2 groups, with either surface-mounted (SPM)/non-salient magnets or interior-mounted (IPM)/salient magnets. NOTICE This option is valid for FC 302 only. | |
| [5] Sync. Reluctance | Use for synchronous reluctance motors. | |

| 1-10 Motor Construction | |
|-------------------------|--|
| Option: | Function: |
| | NOTICE This option is valid for FC 302 only. This option is fully functional in firmware version 7.31 and later. Consult Danfoss before using this option in a frequency converter with an earlier firmware version. |

| 1-11 Motor Model | |
|--------------------------|---|
| Option: | Function: |
| | NOTICE This parameter is valid for FC 302 only. Automatically sets the factory values for the selected motor. If the default value <i>Std. Asynchron</i> is used, determine settings manually according to the selection parameter 1-10 <i>Motor Construction</i> . |
| [1] Std. Asynchron | Default motor model when [0] <i>Asynchron</i> is selected in parameter 1-10 <i>Motor Construction</i> . |
| [2] Std. PM, non salient | Selectable when [1] <i>PM, non-salient SPM</i> is selected in parameter 1-10 <i>Motor Construction</i> . |
| [10] Danfoss OGD LA10 | Selectable when [1] <i>PM, non-salient SPM</i> is selected in parameter 1-10 <i>Motor Construction</i> . Only available for T4, T5 in 1.5–3 kW. Settings are loaded automatically for this specific motor. |
| [11] Danfoss OGD V210 | Selectable when [1] <i>PM, non-salient SPM</i> is selected in parameter 1-10 <i>Motor Construction</i> . Only available for T4, T5 in 0.75–3 kW. Settings are loaded automatically for this specific motor. |

| 1-14 Damping Gain | | |
|-------------------|-------------|---|
| Range: | Function: | |
| 140 %* | [0 - 250 %] | The damping gain stabilizes the PM machine to run smoothly and with stability. The value of damping gain controls the dynamic performance of the PM machine. High damping gain gives high dynamic performance and low damping gain gives low dynamic performance. The dynamic performance is related to the machine data and load type. If the damping gain is too high or low, the control becomes unstable. |

| 1-15 Low Speed Filter Time Const. | | |
|-----------------------------------|---------------|--|
| Range: | Function: | |
| Size related* | [0.01 - 20 s] | This time constant is used below 10% rated speed. Obtain quick control through a short damping time constant. However, if this value is too short, the control becomes unstable. |

| 1-16 High Speed Filter Time Const. | | |
|------------------------------------|---------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 20 s] | This time constant is used above 10% rated speed. Obtain quick control through a short damping time constant. However, if this value is too short, the control becomes unstable. |

| 1-17 Voltage filter time const. | | |
|---------------------------------|---------------|---|
| Range: | | Function: |
| Size related* | [0.001 - 1 s] | Reduces the influence of high frequency ripple and system resonance in the calculation of supply voltage. Without this filter, the ripples in the currents can distort the calculated voltage and affect the stability of the system. |

| 1-18 Min. Current at No Load | | |
|------------------------------|------------|--|
| Range: | | Function: |
| 0 %* | [0 - 50 %] | Adjust this parameter to achieve a smoother motor operation. |

3.3.6 1-2* Motor Data

This parameter group contains input data from the nameplate on the connected motor.

NOTICE

Changing the value of these parameters affects the setting of other parameters.

NOTICE

The following parameters have no effect when parameter 1-10 Motor Construction is set to [1] PM, non-salient SPM, [2] PM, salient IPM, [5] Sync. Reluctance:

- Parameter 1-20 Motor Power [kW]
- Parameter 1-21 Motor Power [HP]
- Parameter 1-22 Motor Voltage
- Parameter 1-23 Motor Frequency

| 1-20 Motor Power [kW] | | |
|-----------------------|---------------------|---|
| Range: | | Function: |
| Size related* | [0.09 - 3000.00 kW] | NOTICE This parameter cannot be adjusted while the motor is running. Enter the nominal motor power in kW according to the motor nameplate data. The default value corresponds to the |

| 1-20 Motor Power [kW] | | |
|-----------------------|--|---|
| Range: | | Function: |
| | | nominal rated output of the frequency converter. This parameter is visible in the LCP if parameter 0-03 Regional Settings is set to [0] International. NOTICE 4 sizes down, 1 size up from nominal unit rating. |

| 1-21 Motor Power [HP] | | |
|-----------------------|----------------------|---|
| Range: | | Function: |
| Size related* | [0.09 - 3000.00 hp] | Enter the nominal motor power in hp according to the motor nameplate data. The default value corresponds to the nominal rated output of the unit. This parameter is visible in LCP if parameter 0-03 Regional Settings is [1] US. |

| 1-22 Motor Voltage | | |
|--------------------|----------------|---|
| Range: | | Function: |
| Size related* | [10 - 1000 V] | Enter the nominal motor voltage according to the motor nameplate data. The default value corresponds to the nominal rated output of the unit. |

| 1-23 Motor Frequency | | |
|----------------------|----------------|--|
| Range: | | Function: |
| Size related* | [20 - 1000 Hz] | Minimum to maximum motor frequency: 20-590 Hz. Select the motor frequency value from the motor nameplate data. If a value other than 50 Hz or 60 Hz is selected, adapt the load-independent settings in parameter 1-50 Motor Magnetisation at Zero Speed to parameter 1-53 Model Shift Frequency. For 87 Hz operation with 230/400 V motors, set the nameplate data for 230 V/50 Hz. To run at 87 Hz, adapt parameter 4-13 Motor Speed High Limit [RPM] and parameter 3-03 Maximum Reference. |

| 1-24 Motor Current | | |
|--------------------|----------------------|--|
| Range: | | Function: |
| Size related* | [0.10 - 10000.00 A] | Enter the nominal motor current value from the motor nameplate data. The data are used for calculating torque, motor overload protection, and so on. |

| 1-25 Motor Nominal Speed | | |
|--------------------------|------------------|--|
| Range: | Function: | |
| Size related* | [10 - 60000 RPM] | Enter the nominal motor speed value from the motor nameplate data. The data are used for calculating motor compensations. $n_{m,n} = n_s - n_{\text{slip}}$. |

| 1-26 Motor Cont. Rated Torque | | |
|-------------------------------|------------------|---|
| Range: | Function: | |
| Size related* | [0.1 - 10000 Nm] | Enter the value from the motor nameplate data. The default value corresponds to the nominal rated output. This parameter is available when <i>parameter 1-10 Motor Construction</i> is set to [1] PM, non-salient SPM, that is the parameter is valid for PM and non-salient SPM motors only. |

| 1-29 Automatic Motor Adaptation (AMA) | | |
|---------------------------------------|--|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. The AMA function optimizes dynamic motor performance by automatically optimizing the advanced motor parameters (<i>parameter 1-30 Stator Resistance (Rs)</i> to <i>parameter 1-35 Main Reactance (X_h)</i>) at motor standstill. Activate the AMA function by pressing [Hand on] after selecting <i>Enable Complete AMA</i> or [2] <i>Enable Reduced AMA</i> . See also the section <i>Automatic Motor Adaptation</i> in the <i>design guide</i> . After a normal sequence, the display reads: <i>Press [OK] to finish AMA</i> . After pressing [OK], the frequency converter is ready for operation. | |
| [0] * | Off | |
| [1] | Enable Complete AMA | <p>Performs</p> <ul style="list-style-type: none"> • AMA of the stator resistance R_s, • The rotor resistance R_r, • The stator leakage reactance X_1, • The rotor leakage reactance X_2, and • The main reactance X_h. <p>Do not select this option if an LC filter is used between the frequency converter and the motor.</p> <p>FC 301: The complete AMA does not include X_h measurement for FC 301. Instead, the X_h value is determined from the motor database. R_s is the best adjustment method (see <i>1-3* Adv. Motor Data</i>).</p> |

| 1-29 Automatic Motor Adaptation (AMA) | | |
|---------------------------------------|--------------------|---|
| Option: | Function: | |
| | | <p>It is recommended to obtain the advanced motor data from the motor manufacturer to enter into <i>parameter 1-31 Rotor Resistance (R_r)</i> through <i>parameter 1-36 Iron Loss Resistance (R_{fe})</i> for best performance.</p> <p>Complete AMA cannot be performed on permanent magnet motors.</p> |
| [2] | Enable Reduced AMA | Performs a reduced AMA of the stator resistance R_s in the system only. This option is available for standard asynchronous motors and non-salient PM motors. |

NOTICE

- For the best adaptation of the frequency converter, run AMA on a cold motor.
- AMA cannot be performed while the motor is running.
- AMA cannot run with a sine-wave filter connected.

NOTICE

It is important to set motor parameter group *1-2* Motor Data* correctly, since these form part of the AMA algorithm. Perform an AMA to achieve optimum dynamic motor performance. It may take up to 10 minutes, depending on the power rating of the motor.

NOTICE

Avoid generating external torque during AMA.

NOTICE

If 1 of the settings in parameter group *1-2* Motor Data* is changed, *parameter 1-30 Stator Resistance (Rs)* to *parameter 1-39 Motor Poles*, the advanced motor parameters, return to default setting.

NOTICE

AMA works problem-free on 1 motor size down, typically works on 2 motor sizes down, rarely works on 3 sizes down, and never work on 4 sizes down. Keep in mind that the accuracy of the measured motor data is poorer when operating on motors smaller than nominal frequency converter size.

3.3.7 1-3* Adv. Motor Data

Parameters for advanced motor data. Ensure that the motor data in *parameter 1-30 Stator Resistance (Rs)* to *parameter 1-39 Motor Poles* match the motor. The default settings are based on standard motor values. If the motor

parameters are not set correctly, a malfunction of the frequency converter system may occur. If the motor data are unknown, running an AMA (automatic motor adaptation) is recommended. See *parameter 1-29 Automatic Motor Adaptation (AMA)*.

Parameter groups *1-3* Adv. Motor Data* and *1-4* Adv. Motor Data II* cannot be adjusted while the motor is running.

NOTICE

A simple check of the $X_1 + X_h$ sum value is to divide the line-to-line motor voltage by the $\sqrt{3}$ and divide this value by the motor no load current. $[V_{L-L}/\sqrt{3}]/I_{NL} = X_1 + X_h$, see *Illustration 3.6*. These values are important to magnetize the motor properly. For high-pole motors, it is highly recommended to perform this check.

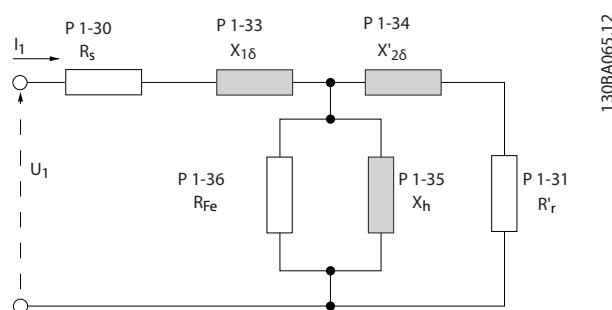

Illustration 3.6 Motor Equivalent Diagram of an Asynchronous Motor

1-30 Stator Resistance (Rs)

| Range: | Function: |
|---------------|--------------------------|
| Size related* | [0.0140 - 140.0000 Ohm] |

NOTICE

For salient PM motors:
AMA is not available.
If only line-line data are available, divide the line-line value by 2 to achieve the line to common (star point) value. Alternatively, measure the value with an ohmmeter. This also takes the resistance of the cable into account. Divide the measured value by 2 and enter the result.

1-30 Stator Resistance (Rs)

| Range: | Function: |
|--------|-----------|
|--------|-----------|

NOTICE

The parameter value is updated after each torque calibration if option [3] *1st start with store* or option [4] *Every start with store* is selected in *parameter 1-47 Torque Calibration*.

1-31 Rotor Resistance (Rr)

| Range: | Function: |
|--------|-----------|
|--------|-----------|

| | |
|---------------|--------------------------|
| Size related* | [0.0100 - 100.0000 Ohm] |
|---------------|--------------------------|

NOTICE

Parameter 1-31 Rotor Resistance (Rr) does not have effect when *parameter 1-10 Motor Construction* is set to [1] *PM, non-salient SPM*, [5] *Sync. Reluctance*.

Set the rotor resistance value R_r to improve shaft performance using 1 of these methods.

- Run an AMA on a cold motor. The frequency converter measures the value from the motor. All compensations are reset to 100%.
- Enter the R_r value manually. Obtain the value from the motor supplier.
- Use the R_r default setting. The frequency converter establishes the setting based on the motor nameplate data.

1-33 Stator Leakage Reactance (X1)

| Range: | Function: |
|--------|-----------|
|--------|-----------|

| | |
|---------------|--------------------------|
| Size related* | [0.0400 - 400.0000 Ohm] |
|---------------|--------------------------|

Set the stator leakage reactance of the motor using 1 of these methods:

- Run an AMA on a cold motor. The frequency converter measures the value from the motor.
- Enter the X_1 value manually. Obtain the value from the motor supplier.
- Use the X_1 default setting. The frequency converter establishes the setting based on the motor nameplate data.

See *Illustration 3.6*.

| 1-33 Stator Leakage Reactance (X1) | | |
|------------------------------------|---|--|
| Range: | Function: | |
| | <p>NOTICE</p> <p>The parameter value is updated after each torque calibration if option [3] 1st start with store or option [4] Every start with store is selected in parameter 1-47 Torque Calibration.</p> <p>NOTICE</p> <p>This parameter is only relevant for ASM.</p> | |

| 1-35 Main Reactance (Xh) | | |
|--------------------------|---|--|
| Range: | Function: | |
| | <p>measures the value from the motor.</p> <p>2. Enter the X_h value manually. Obtain the value from the motor supplier.</p> <p>3. Use the X_h default setting. The frequency converter establishes the setting based on the motor nameplate data.</p> | |

| 1-34 Rotor Leakage Reactance (X2) | | |
|-----------------------------------|--------------------------|--|
| Range: | Function: | |
| Size related* | [0.0400 - 400.0000 Ohm] | <p>Set the rotor leakage reactance of the motor using 1 of these methods:</p> <ul style="list-style-type: none"> Run an AMA on a cold motor. The frequency converter measures the value from the motor. Enter the X_2 value manually. Obtain the value from the motor supplier. Use the X_2 default setting. The frequency converter establishes the setting based on the motor nameplate data. <p>See <i>Illustration 3.6</i>.</p> <p>NOTICE</p> <p>The parameter value is updated after each torque calibration if option [3] 1st start with store or option [4] Every start with store is selected in parameter 1-47 Torque Calibration.</p> <p>NOTICE</p> <p>This parameter is only relevant for ASM.</p> |

| 1-36 Iron Loss Resistance (Rfe) | | |
|---------------------------------|----------------------|---|
| Range: | Function: | |
| Size related* | [0 - 10000.000 Ohm] | <p>Enter the equivalent iron loss resistance (R_{Fe}) value to compensate for iron loss in the motor.</p> <p>The R_{Fe} value cannot be found by performing an AMA.</p> <p>The R_{Fe} value is especially important in torque control applications. If R_{Fe} is unknown, leave parameter 1-36 Iron Loss Resistance (R_{Fe}) on default setting.</p> |

| 1-37 d-axis Inductance (Ld) | | |
|-----------------------------|--------------------|---|
| Range: | Function: | |
| Size related* | [0.0 - 1000.0 mH] | <p>Enter line to common direct axis inductance of the PM motor. Obtain the value from the permanent magnet motor datasheet.</p> <p>If only line-line data are available, divide the line-line value by 2 to achieve the line-common (star point) value. Alternatively, measure the value with an inductance meter. This also takes the inductance of the cable into account. Divide the measured value by 2 and enter the result.</p> <p>This parameter is only active when parameter 1-10 Motor Construction is set to [1] PM, non-salient SPM (Permanent Magnet Motor) or [5] Sync. Reluctance. For a selection with 1 decimal, use this parameter. For a selection with 3 decimals, use parameter 30-80 d-axis Inductance (Ld). FC 302 only.</p> |

| 1-35 Main Reactance (Xh) | | |
|--------------------------|----------------------------|--|
| Range: | Function: | |
| Size related* | [1.0000 - 10000.0000 Ohm] | <p>Set the main reactance of the motor using 1 of these methods:</p> <ol style="list-style-type: none"> Run an AMA on a cold motor. The frequency converter |

| 1-35 Main Reactance (Xh) | | |
|--------------------------|--|--|
| Range: | Function: | |
| | <p>NOTICE</p> <p>The parameter value is updated after each torque calibration if option [3] 1st start with store or option [4] Every start with store is selected in parameter 1-47 Torque Calibration.</p> | |

| 1-38 q-axis Inductance (Lq) | | |
|---------------------------------|--|--|
| Range: | Function: | |
| Size related* [0.000 - 1000 mH] | Set the value of the q-axis inductance. See the motor datasheet. | |

| 1-39 Motor Poles | | |
|-------------------------|----------------------------------|--|
| Range: | Function: | |
| Size related* [2 - 128] | Enter the number of motor poles. | |

| Poles | ~n _n @ 50 Hz | ~n _n @ 60 Hz |
|-------|-------------------------|-------------------------|
| 2 | 2700–2880 | 3250–3460 |
| 4 | 1350–1450 | 1625–1730 |
| 6 | 700–960 | 840–1153 |

Table 3.6 Pole Number for Normal Speed Ranges

Table 3.6 shows the pole number for normal speed ranges of various motor types. Define motors designed for other frequencies separately. The motor pole value is always an even number, because it refers to the total pole number, not pairs of poles. The frequency converter creates the initial setting of parameter 1-39 Motor Poles based on parameter 1-23 Motor Frequency and parameter 1-25 Motor Nominal Speed.

| 1-40 Back EMF at 1000 RPM | | |
|----------------------------|--|--|
| Range: | Function: | |
| Size related* [0 - 9000 V] | <p>Set the nominal back EMF for the motor when running at 1000 RPM. Back EMF is the voltage generated by a PM motor when no frequency converter is connected and the shaft is turned externally. Back EMF is normally specified for nominal motor speed or for 1000 RPM measured between 2 lines. If the value is not available for a motor speed of 1000 RPM, calculate the correct value as follows. If back EMF is for example 320 V at 1800 RPM, it can be calculated at 1000 RPM:</p> <p>Example</p> <p>Back EMF 320 V at 1800 RPM. Back EMF=(Voltage/RPM)*1000=(320/1800)*1000=178.</p> <p>This parameter is only active when parameter 1-10 Motor Construction is set to options that enable PM (permanent magnet) motors.</p> <p>NOTICE</p> <p>When using PM motors, it is recommended to use brake resistors.</p> | |

| 1-41 Motor Angle Offset | | |
|-------------------------|--|--|
| Range: | Function: | |
| 0* [-32768 - 32767] | <p>Enter the correct offset angle between the PM motor and the index position (single-turn) of the attached encoder or resolver. The value range of 0–32768 corresponds to 0–2 x pi (radians). To obtain the offset angle value: After frequency converter start-up, apply DC hold and enter the value of parameter 16-20 Motor Angle into this parameter.</p> <p>This parameter is only active when parameter 1-10 Motor Construction is set to [1] PM, non-salient SPM (Permanent Magnet Motor).</p> | |

| 1-44 d-axis Inductance Sat. (LdSat) | | |
|-------------------------------------|---|--|
| Range: | Function: | |
| Size related* [0 - 1000 mH] | <p>This parameter corresponds to the inductance saturation of Ld. Ideally, this parameter has the same value as parameter 1-37 d-axis Inductance (Ld). If the motor supplier provides an induction curve, enter the induction value at 200% of the nominal value.</p> | |

| 1-45 q-axis Inductance Sat. (LqSat) | | |
|-------------------------------------|---|--|
| Range: | Function: | |
| Size related* [0 - 1000 mH] | <p>This parameter corresponds to the inductance saturation of Lq. Ideally, this parameter has the same value as parameter 1-38 q-axis Inductance (Lq). If the motor supplier provides an induction curve, enter the induction value at 200% of the nominal value.</p> | |

| 1-46 Position Detection Gain | | |
|------------------------------|--------------|--|
| Range: | Function: | |
| 100 %* | [20 - 200 %] | Adjusts the amplitude of the test pulse during position detection at start. Adjust this parameter to improve the position measurement. |

| 1-47 Torque Calibration | | |
|-------------------------|-----------|--|
| Option: | Function: | |
| | | <p>Use this parameter to optimize the torque estimate in the full speed range. The estimated torque is based on the shaft power, $P_{\text{shaft}} = P_m - R_s \times I^2$. Make sure that the R_s value is correct. The R_s value in this formula is equal to the power loss in the motor, the cable, and the frequency converter. When this parameter is active, the frequency converter calculates the R_s value during power-up, ensuring the optimal torque estimate and optimal performance. Use this feature in cases when it is not possible to adjust parameter 1-30 Stator Resistance (R_s) on each frequency converter to compensate for</p> |

1-47 Torque Calibration**Option:** **Function:**

| | | |
|-----|------------------------|---|
| | | the cable length, frequency converter losses, and the temperature deviation on the motor. |
| [0] | Off | |
| [1] | 1st start after pwr-up | Calibrates at the first start-up after power-up and keeps this value until reset by a power cycle. |
| [2] | Every start | Calibrates at every start-up, compensating for a possible change in motor temperature since last start-up. The value is reset after a power cycle. |
| [3] | 1st start with store | The frequency converter calibrates the torque at the first start-up after power-up. This option is used to update motor parameters: <ul style="list-style-type: none"> • Parameter 1-30 Stator Resistance (R_s). • Parameter 1-33 Stator Leakage Reactance (X_1). • Parameter 1-34 Rotor Leakage Reactance (X_2). • Parameter 1-37 d-axis Inductance (L_d). |
| [4] | Every start with store | The frequency converter calibrates the torque at every start-up, compensating for a possible change in motor temperature since last start-up. This option is used to update motor parameters: <ul style="list-style-type: none"> • Parameter 1-30 Stator Resistance (R_s). • Parameter 1-33 Stator Leakage Reactance (X_1). • Parameter 1-34 Rotor Leakage Reactance (X_2). • Parameter 1-37 d-axis Inductance (L_d). |

1-48 Inductance Sat. Point**Range:** **Function:**

| | | |
|---------------|-------------|------------------------------|
| Size related* | [1 - 500 %] | Inductance saturation point. |
|---------------|-------------|------------------------------|

3.3.8 1-5* Load Indep. Setting**1-50 Motor Magnetisation at Zero Speed**

This parameter is not visible on the LCP.

Range: **Function:**

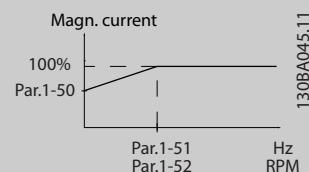

| | |
|---|--|
| 100 % * [0 - 300 %] | NOTICE <i>Parameter 1-50 Motor Magnetisation at Zero Speed has no effect when parameter 1-10 Motor Construction = [1] PM, non-salient SPM.</i> |
| Use this parameter along with parameter 1-51 Min Speed Normal Magnetising | |

1-50 Motor Magnetisation at Zero Speed

This parameter is not visible on the LCP.

Range: **Function:**

[RPM] to obtain a different thermal load on the motor when running at low speed. Enter a value which is a percentage of the rated magnetizing current. If the setting is too low, the torque on the motor shaft may be reduced.

**Illustration 3.7 Motor Magnetisation****1-51 Min Speed Normal Magnetising [RPM]**

This parameter is not visible on the LCP.

Range: **Function:**

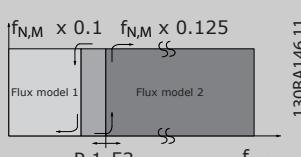

NOTICE
Parameter 1-51 Min Speed Normal Magnetising [RPM] has no effect when parameter 1-10 Motor Construction=[1] PM, non-salient SPM.

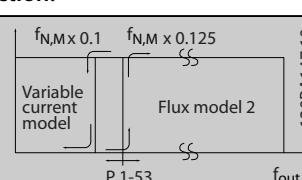

Set the required speed for normal magnetizing current. If the speed is set lower than the motor slip speed, parameter 1-50 Motor Magnetisation at Zero Speed and parameter 1-51 Min Speed Normal Magnetising [RPM] are of no significance.

Use this parameter along with parameter 1-50 Motor Magnetisation at Zero Speed. See Table 3.6.

1-52 Min Speed Normal Magnetising [Hz]**Range:** **Function:**

Set the required frequency for normal magnetizing current. If the frequency is set lower than the motor slip frequency, parameter 1-50 Motor Magnetisation at Zero Speed is inactive. Use this parameter along with parameter 1-50 Motor Magnetisation at Zero Speed. See Illustration 3.7.

| 1-53 Model Shift Frequency | |
|------------------------------|--|
| Range: | Function: |
| Size related* [4 - 18.0 Hz] | <p>NOTICE This parameter cannot be adjusted while the motor is running.</p> <p>Flux model shift Enter the frequency value for shift between 2 models for determining motor speed. Select the value based on settings in <i>parameter 1-00 Configuration Mode</i> and <i>parameter 1-01 Motor Control Principle</i>.</p> <p>There are 2 options:</p> <ul style="list-style-type: none"> Shift between Flux model 1 and Flux model 2, or Shift between Variable Current mode and Flux model 2. <p>NOTICE This is valid for FC 302 only.</p> <p>Flux model 1 – Flux model 2 This model is used when <i>parameter 1-00 Configuration Mode</i> is set to [1] <i>Speed closed loop</i> or [2] <i>Torque</i>, and <i>parameter 1-01 Motor Control Principle</i> is set to [3] <i>Flux w/motor feedback</i>. With this parameter, it is possible to make an adjustment of the shifting point where the frequency converter changes between flux model 1 and flux model 2, which is useful in some sensitive speed and torque control applications.</p>  <p>Illustration 3.8 Parameter 1-00 Configuration Mode = [1] Speed closed loop or [2] Torque and parameter 1-01 Motor Control Principle = [3] Flux w/motor feedback</p> <p>Variable current - flux model - sensorless This model is used when <i>parameter 1-00 Configuration Mode</i> is set to [0] <i>Speed open loop</i> and <i>parameter 1-01 Motor Control Principle</i> is set to [2] <i>Flux sensorless</i>. In speed open loop in flux mode, the speed is determined from the current measurement. Below f_{norm} x 0.1, the frequency converter runs on a variable current model. Above $f_{\text{norm}} \times 0.125$ the frequency converter runs on a flux model.</p> |

| 1-53 Model Shift Frequency | |
|----------------------------|--|
| Range: | Function: |
| |  <p>Illustration 3.9 Parameter 1-00 Configuration Mode = [0] Speed open loop, parameter 1-01 Motor Control Principle = [2] Flux sensorless</p> |

| 1-54 Voltage reduction in fieldweakening | |
|--|--|
| Range: | Function: |
| 0 V* [0 - 100 V] | The value of this parameter reduces the maximal voltage available for the flux of the motor in field weakening, giving more voltage available for torque. An excessive value may cause stall problems at high speed. |

| 1-55 U/f Characteristic - U | |
|-----------------------------|---|
| Range: | Function: |
| Size related* [0 - 1000 V] | <p>Enter the voltage at each frequency point to manually form a U/f characteristic matching the motor.</p> <p>The frequency points are defined in <i>parameter 1-56 U/f Characteristic - F</i>.</p> <p>This parameter is an array parameter [0-5] and is only accessible when <i>parameter 1-01 Motor Control Principle</i> is set to [0] <i>U/f</i>.</p> |

| 1-56 U/f Characteristic - F | |
|-------------------------------|--|
| Range: | Function: |
| Size related* [0 - 1000.0 Hz] | <p>Enter the frequency points to manually form a U/f characteristic matching the motor.</p> <p>The voltage at each point is defined in <i>parameter 1-55 U/f Characteristic - U</i>.</p> <p>This parameter is an array parameter [0-5] and is only accessible when <i>parameter 1-01 Motor Control Principle</i> is set to [0] <i>U/f</i>.</p> |

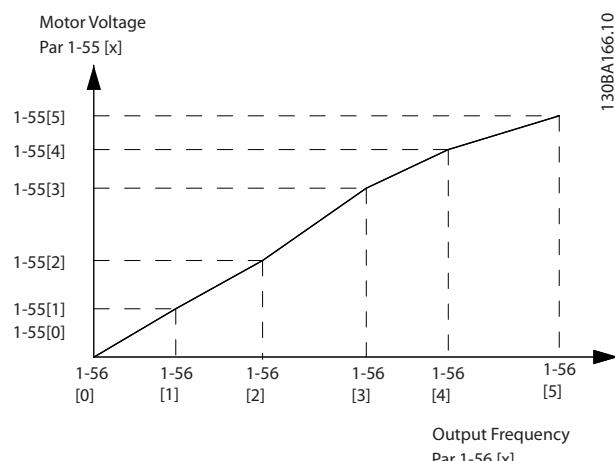

Illustration 3.10 U/f Characteristic

| 1-57 Torque Estimation Time Constant | | |
|--|----------------|--|
| Enter the time constant for the torque estimation below model change point in flux sensorless control principle. | | |
| Range: | Function: | |
| 150 ms* | [50 - 1000 ms] | |
| 1-58 Flying Start Test Pulses Current | | |
| Range: | Function: | |
| Size related* | [0 - 200 %] | Sets the current level for the fly start test pulses that are used to detect the motor direction. 100% means $I_{m,n}$. Adjust the value to be big enough to avoid noise influence, but low enough to avoid affecting the accuracy (current must be able to drop to 0 before the next pulse). Reduce the value to reduce the generated torque. Default is 30% for asynchronous motors, but may vary for PM motors. For adjusting PM motors, the value tunes for back EMF and d-axis inductance of the motor. |

| 1-59 Flying Start Test Pulses Frequency | | |
|---|--------------|--|
| Range: | Function: | |
| Size related* | [0 - 500 %] | Asynchronous motor: Set the frequency of the flying start test pulses that are used to detect the motor direction. For asynchronous motors, the value 100% means that the slip is doubled. Increase this value to reduce the generated torque. For synchronous motors, this value is the percentage $n_{m,n}$ of the free-running motor. Above this value, flying start is always performed. Below this value, the start mode is selected in parameter 1-70 PM Start Mode |

3.3.9 1-6* Load Depend. Setting

| 1-60 Low Speed Load Compensation | |
|----------------------------------|-------------|
| Range: | Function: |
| 100 %* | [0 - 300 %] |

Enter the % value to compensate voltage in relation to load when the motor is running at low speed and obtain the optimum U/f characteristic. The motor size determines the frequency range within which this parameter is active.

| Motor size | Changeover |
|---------------|------------|
| 0.25 - 7.5 kW | <10 Hz |

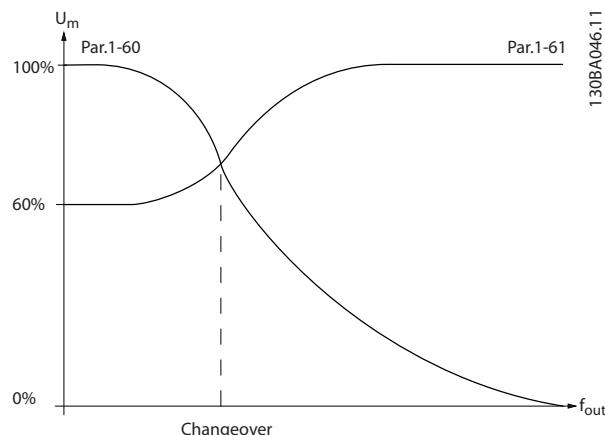

Illustration 3.11 Changeover

| 1-61 High Speed Load Compensation | | |
|-----------------------------------|-------------|---|
| Range: | Function: | |
| 100 %* | [0 - 300 %] | Enter the % value to compensate voltage in relation to load when the motor is running at high speed and obtain the optimum U/f characteristic. The motor size determines the frequency range within which this parameter is active. |

| Motor size | Changeover |
|---------------|------------|
| 0.25 - 7.5 kW | >10 Hz |

Table 3.7 Changeover Frequency

| 1-62 Slip Compensation | | |
|------------------------|-----------------|---|
| Range: | Function: | |
| Size related* | [-500 - 500 %] | Enter the % value for slip compensation, to compensate for tolerances in the value of $n_{M,N}$. Slip compensation is calculated automatically, that is on the basis of the nominal motor speed $n_{M,N}$. This function is not active when parameter 1-00 Configuration Mode is set to [1] Speed closed loop or [2] Torque torque |

| | | | | | |
|--|--|--|--|--|--|
| 1-62 Slip Compensation | | | 1-66 Min. Current at Low Speed | | |
| Range: Function: | | | Range: Function: | | |
| | | | | | |
| control with speed feedback or when parameter 1-01 Motor Control Principle is set to [0] U/f special motor mode. | | | Enter the minimum motor current at low speed, see parameter 1-53 Model Shift Frequency. Increasing this current improves motor torque at low speed. | | |
| 1-63 Slip Compensation Time Constant | | | Parameter 1-66 Min. Current at Low Speed is enabled when parameter 1-00 Configuration Mode [0] Speed open loop only. The frequency converter runs with constant current through motor for speeds below 10 Hz. | | |
| Range: Function: | | | For speeds above 10 Hz, the motor Flux model in the frequency converter controls the motor. Parameter 4-16 Torque Limit Motor Mode and/or parameter 4-17 Torque Limit Generator Mode automatically adjust parameter 1-66 Min. Current at Low Speed. The parameter with the highest value adjusts parameter 1-66 Min. Current at Low Speed. The current setting in parameter 1-66 Min. Current at Low Speed is composed of the torque generating current and the magnetizing current. | | |
| | | | Example: Set parameter 4-16 Torque Limit Motor Mode to 100% and set parameter 4-17 Torque Limit Generator Mode to 60%. Parameter 1-66 Min. Current at Low Speed automatically adjusts to about 127%, depending on the motor size. | | |
| 1-64 Resonance Dampening | | | 1-67 Load Type | | |
| Range: Function: | | | This parameter is valid for FC 302 only. | | |
| | | | Option: Function: | | |
| 100 %* [0 - 500 %] | | | [0] * Passive load For conveyors, fan, and pump applications. | | |
| NOTICE Parameter 1-64 Resonance Dampening has no effect when parameter 1-10 Motor Construction=[1] PM, non-salient SPM. | | | [1] Active load Use for hoisting applications. This option allows the frequency converter to ramp up at 0 RPM. When [1] Active Load is selected, set parameter 1-66 Min. Current at Low Speed to a level which corresponds to maximum torque. | | |
| Enter the resonance damping value. Set parameter 1-64 Resonance Dampening and parameter 1-65 Resonance Dampening Time Constant to help eliminate high frequency resonance problems. To reduce resonance oscillation, increase the value of parameter 1-64 Resonance Dampening. | | | | | |
| 1-65 Resonance Dampening Time Constant | | | 1-68 Motor Inertia | | |
| Range: Function: | | | Range: Function: | | |
| | | | | | |
| 5 ms* [5 - 50 ms] | | | 0 kgm²* [0.0000 - 10000.0000 kgm²] | | |
| NOTICE Parameter 1-65 Resonance Dampening Time Constant has no effect when parameter 1-10 Motor Construction = [1] PM, non-salient SPM. | | | Enter the motor inertia to obtain an improved torque readout and therefore a better estimate of the mechanical torque on the shaft. Available in flux control principle only. | | |
| Set parameter 1-64 Resonance Dampening and parameter 1-65 Resonance Dampening Time Constant to help eliminate high frequency resonance problems. Enter the time constant that provides the best dampening. | | | | | |

| 1-69 System Inertia | | |
|---------------------|---------------------------------------|---|
| Range: | Function: | |
| Size related* | [0000 - 10000.0000 kgm ²] | <p>NOTICE Valid for FC 302 only.</p> <p>This parameter cannot be adjusted while motor is running.</p> <p>Active in flux open loop only. Used to compute the acceleration torque at low speed. Used in the torque limit controller.</p> |

3.3.10 1-7* Start Adjustments

| 1-70 PM Start Mode | | |
|--------------------|-----------------|---|
| Option: | Function: | |
| [0] * | Rotor Detection | Estimates the electrical angle of the rotor and uses this as a starting point. Standard selection for VLT® AutomationDrive applications. |
| [1] | Parking | The parking function applies DC current across the stator winding and rotates the rotor to electrical 0 position (typically selected for HVAC applications). Parking current and time are configured in parameter 2-06 Parking Current and parameter 2-07 Parking Time. |

| 1-71 Start Delay | | |
|------------------|--------------|--|
| Range: | Function: | |
| 0 s* | [0 - 25.5 s] | This parameter refers to the start function selected in parameter 1-72 Start Function. Enter the time delay required before commencing acceleration. |

| 1-72 Start Function | | |
|---------------------|---|--|
| Option: | Function: | |
| | Select the start function during start delay. This parameter is linked to parameter 1-71 Start Delay. | |
| [0] | DC Hold/delay time | Energizes motor with a DC hold current (parameter 2-00 DC Hold Current) during the start delay time. |
| [1] | DC Brake/delay time | Energizes motor with a DC brake current (parameter 2-01 DC Brake Current) during the start delay time. |

| 1-72 Start Function | | |
|---------------------|-----------------------|---|
| Option: | Function: | |
| [2] * | Coast/delay time | Motor coasted during the start delay time (inverter off). |
| [3] | Start speed cw | <p>Only possible with VVC⁺. Connect the function described in parameter 1-74 Start Speed [RPM] and parameter 1-76 Start Current in the start delay time.</p> <p>Regardless of the value applied by the reference signal, the output speed applies the setting of the start speed in parameter 1-74 Start Speed [RPM] or parameter 1-75 Start Speed [Hz], and the output current corresponds to the setting of the start current in parameter 1-76 Start Current. This function is typically used in hoisting applications without counterweight and especially in applications with a cone-motor, where the start is clockwise, followed by rotation in the reference direction.</p> |
| [4] | Horizontal operation | <p>Only possible with VVC⁺. For obtaining the function described in parameter 1-74 Start Speed [RPM] and parameter 1-76 Start Current during the start delay time. The motor rotates in the reference direction. If the reference signal equals zero (0), parameter 1-74 Start Speed [RPM] is ignored and the output speed equals zero (0). The output current corresponds to the setting of the start current in parameter 1-76 Start Current.</p> |
| [5] | VVC+/Flux clockwise | <p>For the function described in parameter 1-74 Start Speed [RPM] only. The start current is calculated automatically. This function uses the start speed in the start delay time only. Regardless of the value set by the reference signal, the output speed equals the setting of the start speed in parameter 1-74 Start Speed [RPM]. [3] Start speed/current clockwise and [5] VVC⁺/Flux clockwise are typically used in hoisting applications. [4] Start speed/current in reference direction is particularly used in applications with counterweight and horizontal movement.</p> |
| [6] | Hoist Mech. Brake Rel | For utilizing mechanical brake control functions (parameter 2-24 Stop Delay to parameter 2-28 Gain Boost Factor). This parameter is only active in flux control principle, in a mode with motor feedback or sensorless mode. |
| [7] | VVC+/Flux counter-cw | |

| 1-73 Flying Start | | |
|-------------------|--|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. This function makes it possible to catch a motor which is spinning freely due to a mains drop-out. | |
| [0] | Disabled | No function |
| [1] | Enabled | Enables the frequency converter to catch and control a spinning motor. When parameter 1-73 Flying Start is enabled, parameter 1-71 Start Delay and parameter 1-72 Start Function have no function. When parameter 1-73 Flying Start is enabled, parameter 1-58 Flying Start Test Pulses Current and parameter 1-59 Flying Start Test Pulses Frequency are used to specify the conditions for the flying start. |
| [2] | Enabled Always | |
| [3] | Enabled Ref. Dir. | |
| [4] | Enab. Always Ref. Dir. | |

NOTICE

This function is not recommended for hoisting applications.

For power levels above 55 kW, flux mode must be used to achieve the best performance.

NOTICE

To obtain the best flying start performance the advanced motor data, parameter 1-30 Stator Resistance (R_s) to parameter 1-35 Main Reactance (X_h), must be correct.

| 1-74 Start Speed [RPM] | | |
|------------------------|---------------|---|
| Range: | Function: | |
| Size related* | [0 - 600 RPM] | Set a motor start speed. After the start signal, the output speed leaps to set value. Set the start function in parameter 1-72 Start Function to [3] Start speed cw, [4] Horizontal operation, or [5] VVC +/Flux clockwise, and set a start delay time in parameter 1-71 Start Delay. |

| 1-75 Start Speed [Hz] | | |
|-----------------------|----------------|---|
| Range: | Function: | |
| Size related* | [0 - 500.0 Hz] | This parameter can be used for hoist applications (cone rotor). Set a motor start |

| 1-75 Start Speed [Hz] | | |
|-----------------------|-----------|---|
| Range: | Function: | |
| | | speed. After the start signal, the output speed leaps to the set value. Set the start function in parameter 1-72 Start Function to [3] Start speed cw, [4] Horizontal operation, or [5] VVC +/Flux clockwise, and set a start delay time in parameter 1-71 Start Delay. |

| 1-76 Start Current | | |
|--------------------|-------------|---|
| Range: | Function: | |
| 0 A* 1-24 A] | [0 - par.] | Some motors, for example cone rotor motors, need extra current/starting speed to disengage the rotor. To obtain this boost, set the required current in parameter 1-76 Start Current. Set parameter 1-74 Start Speed [RPM]. Set parameter 1-72 Start Function to [3] Start speed cw or [4] Horizontal operation, and set a start delay time in parameter 1-71 Start Delay. This parameter can be used for hoist applications (cone rotor). |

3.3.11 1-8* Stop Adjustments

| 1-80 Function at Stop | | |
|-----------------------|-----------------|--|
| Option: | Function: | |
| | | Select the frequency converter function after a stop command or after the speed is ramped down to the settings in parameter 1-81 Min Speed for Function at Stop [RPM]. |
| [0] | Coast | Leaves motor in free mode. The motor is disconnected from the frequency converter. |
| [1] | DC hold | Energizes the motor with a DC hold current (see parameter 2-00 DC Hold Current). |
| [2] | Motor check | Checks if a motor has been connected. |
| [3] | Pre-magnetizing | Builds up a magnetic field while the motor is stopped. This allows the motor to produce torque quickly at subsequent start commands (asynchronous motors only). This premagnetizing function does not help the very first start command. Two different solutions are available to premagnetize the machine for the first start command: <ol style="list-style-type: none"> Start the frequency converter with a 0 RPM reference and wait 2-4 rotor time constants before increasing the speed reference. Set parameter 1-71 Start Delay to the required premagnetizing time |

| 1-80 Function at Stop | | |
|-----------------------|--|--|
| Option: | Function: | |
| | <p>(2–4 rotor time constants. See the time constants description further in this section).</p> <p>3. Set <i>parameter 1-72 Start Function</i> to either [0] DC hold or [1] DC Brake.</p> <p>4. Set the DC hold or DC brake current magnitude (<i>parameter 2-00 DC Hold Current</i> or <i>parameter 2-01 DC Brake Current</i>) to be equal to $I_{pre-mag} = U_{nom}/(1.73 \times X_h)$</p> <p>Sample rotor time constants = $(X_h+X_2)/(6.3 \times Freq_nom \times R_r)$</p> <p>1 kW = 0.2 s</p> <p>10 kW = 0.5 s</p> <p>100 kW = 1.7 s</p> <p>1000 kW = 2.5 s</p> | |
| [4] | DC Voltage U0 | When the motor is stopped, the <i>parameter 1-55 U/f Characteristic - U</i> [0] defines the voltage at 0 Hz. |
| [5] | Coast at low reference | When the reference is below <i>parameter 1-81 Min Speed for Function at Stop [RPM]</i> , the motor is disconnected from the frequency converter. |
| [6] | Motor check, alarm | |

| 1-81 Min Speed for Function at Stop [RPM] | | |
|---|---------------|---|
| Range: | Function: | |
| Size related* | [0 - 600 RPM] | Set the speed at which to activate <i>parameter 1-80 Function at Stop</i> . |

| 1-82 Min Speed for Function at Stop [Hz] | | |
|--|---------------|--|
| Range: | Function: | |
| Size related* | [0 - 20.0 Hz] | Set the output frequency at which to activate <i>parameter 1-80 Function at Stop</i> . |

| 1-83 Precise Stop Function | | |
|----------------------------|--|--|
| Option: | Function: | |
| | <p>NOTICE</p> <p>This parameter cannot be adjusted while the motor is running.</p> <p>Valid for FC 302 only.</p> | |
| [0] * Precise ramp stop | Only optimal when the operational speed, for example the operational speed of a conveyor belt is constant. This is an open-loop control. Achieves high repetitive precision at the stop point. | |

| 1-83 Precise Stop Function | | |
|----------------------------|---------------------|--|
| Option: | Function: | |
| [1] | Cnt stop with reset | <p>Counts the number of pulses, typically from an encoder, and generates a stop signal after a pre-programmed number of pulses, defined in <i>parameter 1-84 Precise Stop Counter Value</i>, has been received at <i>terminal 29</i> or <i>terminal 33</i>. This is direct feedback with one-way closed-loop control.</p> <p>The counter function is activated (starts timing) at the edge of the start signal (when it changes from stop to start). After each precise stop, the number of pulses counted during ramp down to 0 RPM is reset.</p> |
| [2] | Cnt stop w/o reset | <p>Same as [2] Cnt stop with reset but the number of pulses counted during ramp down to 0 RPM is deducted from the counter value entered in <i>parameter 1-84 Precise Stop Counter Value</i>. This reset function can be used to compensate for the extra distance done during ramping down and to reduce the impacts of gradual wear of mechanical parts.</p> |
| [3] | Speed comp stop | <p>Stops at precisely the same point, regardless of the present speed. The stop signal is delayed internally when the present speed is lower than the maximum speed (set in <i>parameter 4-19 Max Output Frequency</i>). The delay is calculated on the basis of the reference speed of the frequency converter and not on the basis of the actual speed. Make sure that the frequency converter has ramped up before activating the speed compensated stop.</p> |
| [4] | Com cnt stop w/rst | <p>Same as Speed comp stop but after each precise stop, the number of pulses counted during ramp down to 0 RPM is reset.</p> |
| [5] | Comp cnt stop w/o r | <p>Same as Speed comp stop but the number of pulses counted during ramp down to 0 RPM is deducted from the counter value entered in <i>parameter 1-84 Precise Stop Counter Value</i>. This reset function can be used to compensate for the extra distance done during ramping down and to reduce the impacts of gradual wear of mechanical parts.</p> |

The precise stop functions are advantageous in applications where high precision is required. If using a standard stop command, the accuracy is determined by the internal task time. That is not the case when using the precise stop function. It eliminates the task time dependence and increases the accuracy substantially. The frequency converter tolerance is normally given by its task time. However, by using its special precise stop function, the tolerance is independent of the task time because the stop signal immediately interrupts the execution of the frequency converter program. The precise stop function gives a highly reproducible delay from the

stop signal is given until the ramping down starts. Run a test to find this delay as it is a sum of sensor, PLC, frequency converter, and mechanical parts.

To ensure optimum accuracy, there should be at least 10 cycles during ramping down, see:

- *Parameter 3-42 Ramp 1 Ramp Down Time.*
- *Parameter 3-52 Ramp 2 Ramp Down Time.*
- *Parameter 3-62 Ramp 3 Ramp down Time.*
- *Parameter 3-72 Ramp 4 Ramp Down Time.*

The precise stop function is set up here and enabled from DI at *terminal 29* or *terminal 33*.

| 1-84 Precise Stop Counter Value | | |
|---------------------------------|--|---|
| Range: | Function: | |
| 100000* [0 - 99999999] | Enter the counter value to be used in the integrated precise stop function, <i>parameter 1-83 Precise Stop Function</i> . The maximum permissible frequency at terminal 29 or 33 is 110 kHz. | <p>NOTICE Not used for selections [0] Precise ramp stop and [3] Speed comp stop in parameter 1-83 Precise Stop Function.</p> |

| 1-85 Precise Stop Speed Compensation Delay | | |
|--|---|--|
| Range: | Function: | |
| 10 ms* [0 - 100 ms] | Enter the delay time for sensors, PLCs, and so on. for use in <i>parameter 1-83 Precise Stop Function</i> . In speed compensated stop mode, the delay time at different frequencies has a major influence on the stop function. | <p>NOTICE Not used for selections [0] Precise ramp stop, [1] Cnt stop with reset, and [2] Cnt stop w/o reset in parameter 1-83 Precise Stop Function.</p> |

3.3.12 1-9* Motor Temperature

| 1-90 Motor Thermal Protection | | |
|-------------------------------|--|--|
| Option: | Function: | |
| | Motor thermal protection can be implemented using a range of techniques: | <ul style="list-style-type: none"> • Via a PTC sensor in the motor windings connected to 1 of the analog or digital inputs (<i>parameter 1-93 Thermistor Source</i>). |

| 1-90 Motor Thermal Protection | | |
|-------------------------------|--------------------|--|
| Option: | Function: | |
| | | <p>See chapter 3.3.13.1 PTC Thermistor Connection.</p> <ul style="list-style-type: none"> • Via a KTY sensor in the motor winding connected to an analog input (<i>parameter 1-96 KTY Thermistor Resource</i>). See chapter 3.3.13.2 KTY Sensor Connection. • Via calculation (ETR = Electronic Thermal Relay) of the thermal load, based on the actual load and time. The calculated thermal load is compared with the rated motor current $I_{M,N}$ and the rated motor frequency $f_{M,N}$. See chapter 3.3.13.3 ETR and chapter 3.3.13.4 ATEX ETR. • Via a mechanical thermal switch (Klixon type). See chapter 3.3.13.5 Klixon. <p>For the North American market: The ETR functions provide class 20 motor overload protection in accordance with NEC.</p> |
| [0] | No protection | Continuously overloaded motor, when no warning or trip of the frequency converter is required. |
| [1] | Thermistor warning | Activates a warning when the connected thermistor or KTY sensor in the motor reacts in the event of motor overtemperature. |
| [2] | Thermistor trip | <p>Stops (trips) the frequency converter when connected thermistor or KTY sensor in the motor reacts in the event of motor overtemperature.</p> <p>The thermistor cut-out value must be more than 3 kΩ.</p> <p>Integrate a thermistor (PTC sensor) in the motor for winding protection.</p> |
| [3] | ETR warning 1 | Calculates the load when set-up 1 is active and activates a warning on the display when the motor is overloaded. Program a warning signal via 1 of the digital outputs. |
| [4] | ETR trip 1 | Calculates the load when set-up 1 is active and stops (trips) the frequency converter when the motor is overloaded. Program a warning signal via 1 of the digital outputs. The signal appears in the event of a warning and if the frequency converter trips (thermal warning). |
| [5] | ETR warning 2 | |
| [6] | ETR trip 2 | |
| [7] | ETR warning 3 | |

| 1-90 Motor Thermal Protection | | |
|-------------------------------|---------------|---|
| Option: | Function: | |
| [8] | ETR trip 3 | |
| [9] | ETR warning 4 | |
| [10] | ETR trip 4 | |
| [20] | ATEX ETR | Activates the thermal monitoring function for Ex-e motors for ATEX. Enables parameter 1-94 ATEX ETR cur.lim. speed reduction, parameter 1-98 ATEX ETR interpol. points freq. and parameter 1-99 ATEX ETR interpol points current. |
| [21] | Advanced ETR | |

NOTICE

If [20] ATEX ETR is selected, follow the instructions in the dedicated chapter of the *VLT® AutomationDrive Design Guide* and the instructions provided by the motor manufacturer.

NOTICE

If [20] ATEX ETR is selected, set parameter 4-18 Current Limit to 150%.

3.3.13.1 PTC Thermistor Connection

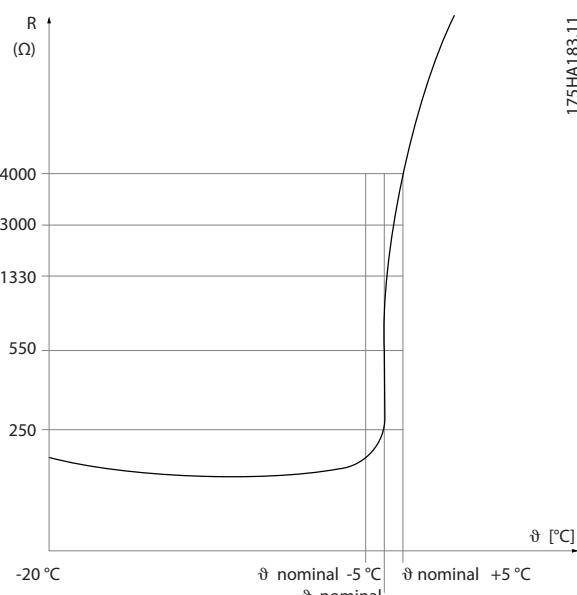

Illustration 3.12 PTC Profile

Using a digital input and 10 V as supply:

Example: The frequency converter trips when the motor temperature is too high.

Parameter set-up:

- Set parameter 1-90 Motor Thermal Protection to [2] Thermistor Trip.
- Set parameter 1-93 Thermistor Source to [6] Digital Input.

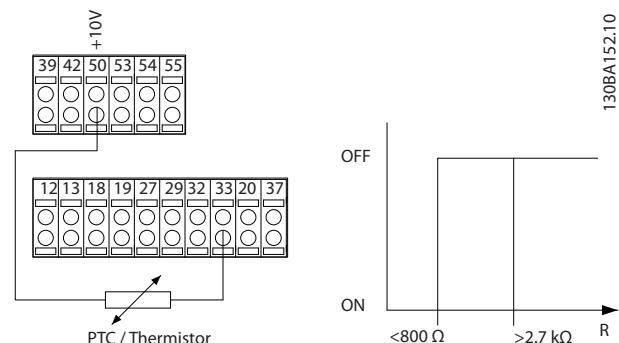

Illustration 3.13 PTC Thermistor Connection - Digital Input

Using an analog input and 10 V as supply:

Example: The frequency converter trips when the motor temperature is too high.

Parameter set-up:

- Set parameter 1-90 Motor Thermal Protection to [2] Thermistor Trip.
- Set parameter 1-93 Thermistor Source to [2] Analog Input 54.

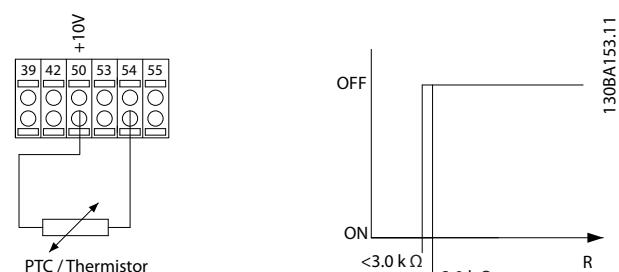

Illustration 3.14 PTC Thermistor Connection - Analog Input

| Input digital/analog | Supply voltage | Threshold cut out values. |
|----------------------|----------------|---------------------------------|
| Digital | 10 V | <800 Ω ⇒2.7 k Ω |
| Analog | 10 V | <3.0 k Ω ⇒3.0 k Ω |

Table 3.8 Threshold Cutout Values

NOTICE

Check that the selected supply voltage follows the specification of the used thermistor element.

3.3.13.2 KTY Sensor Connection

NOTICE

(FC 302 only).

KTY sensors are used especially in permanent magnet servo motors (PM motors) for dynamic adjusting of motor parameters as stator resistance (*parameter 1-30 Stator Resistance (Rs)*) for PM motors and also rotor resistance (*parameter 1-31 Rotor Resistance (Rr)*) for asynchronous motors, depending on winding temperature. The calculation is:

$$R_s = R_{s,20^\circ C} \times (1 + \alpha_{cu} \times \Delta T) [\Omega] \text{ where } \alpha_{cu} = 0.00393$$

KTY sensors can be used for motor protecting (*parameter 1-97 KTY Threshold level*).

FC 302 can handle 3 types of KTY sensors, defined in *parameter 1-95 KTY Sensor Type*. The actual sensor temperature can be read out from *parameter 16-19 KTY sensor temperature*.

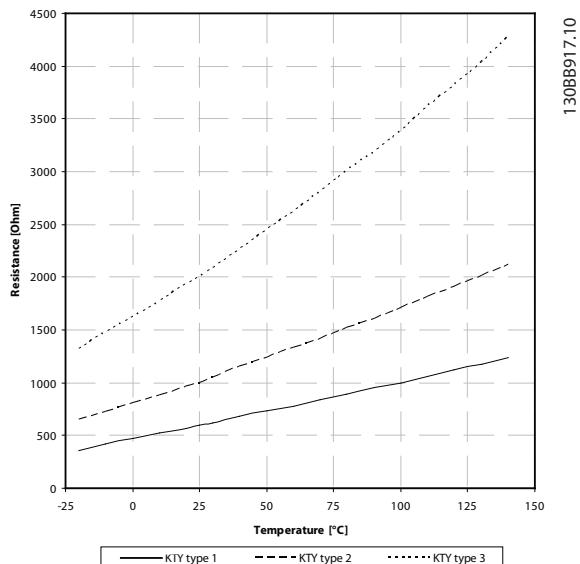

Illustration 3.15 KTY Type Selection

KTY Sensor 1: 1 kΩ at 100 °C (for example Philips KTY 84-1)

KTY Sensor 2: 1 kΩ at 25 °C (for example Philips KTY 83-1)

KTY Sensor 3: 2 kΩ at 25 °C (for example Infineon KTY-10)

NOTICE

If the temperature of the motor is utilized through a thermistor or KTY sensor, the PELV is not complied with if there are short circuits between motor windings and the sensor. Put extra isolation on the sensor to comply with PELV.

3.3.13.3 ETR

The calculations estimate the need for a lower load at lower speed due to less cooling from the fan incorporated in the motor.

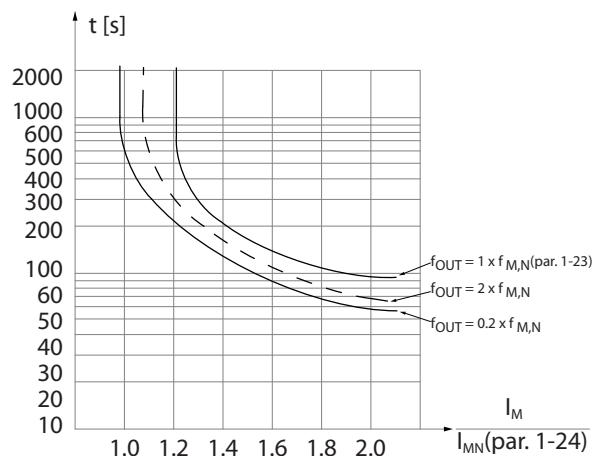

Illustration 3.16 ETR Profile

3.3.13.4 ATEX ETR

The VLT® PTC Thermistor Card MCB 112 offers ATEX-approved monitoring of motor temperature. Alternatively, an external ATEX-approved PTC protection device can be used.

NOTICE

Only use ATEX Ex-e-approved motors for this function. See motor nameplate, approval certificate, datasheet, or contact motor supplier.

When controlling an Ex-e motor with *increased safety*, it is important to ensure certain limitations. The parameters that must be programmed are presented in the following application example.

| Function | Setting |
|--|---|
| Parameter 1-90 Motor Thermal Protection | [20] ATEX ETR |
| Parameter 1-94 ATEX ETR cur.lim. speed reduction | 20% |
| Parameter 1-98 ATEX ETR interpol. points freq. | Motor nameplate. |
| Parameter 1-99 ATEX ETR interpol. points current | |
| Parameter 1-23 Motor Frequency | Enter the same value as for parameter 4-19 Max Output Frequency. |
| Parameter 4-19 Max Output Frequency | Motor nameplate, possibly reduced for long motor cables, sinus filter, or reduced supply voltage. |
| Parameter 4-18 Current Limit | Forced to 150% by 1-90 [20] |
| Parameter 5-15 Terminal 33 Digital Input | [80] PTC Card 1 |
| Parameter 5-19 Terminal 37 Safe Stop | [4] PTC 1 Alarm |
| Parameter 14-01 Switching Frequency | Check that the default value fulfills the requirement from motor nameplate. If not, use sine-wave filter. |
| Parameter 14-26 Trip Delay at Inverter Fault | 0 |

Table 3.9 Parameters

CAUTION

Compare the minimum switching frequency requirement stated by the motor manufacturer to the minimum switching frequency of the frequency converter, the default value in parameter 14-01 Switching Frequency. If the frequency converter does not meet this requirement, use a sine-wave filter.

More information about ATEX ETR thermal monitoring can be found in Application Note for FC 300 ATEX ETR Thermal Monitoring Function.

3.3.13.5 Klixon

The Klixon type thermal circuit breaker uses a KLIXON® metal dish. At a predetermined overload, the heat caused by the current through the disc causes a trip.

Using a digital input and 24 V as supply:

Example: The frequency converter trips when the motor temperature is too high.

Parameter set-up:

- Set parameter 1-90 Motor Thermal Protection to [2] Thermistor Trip.
- Set parameter 1-93 Thermistor Source to [6] Digital Input.

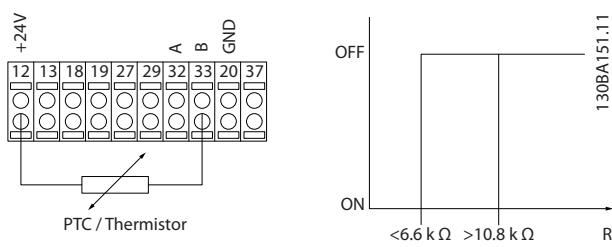

Illustration 3.17 Thermistor Connection

1-91 Motor External Fan

Option: Function:

| | | |
|-------|-----|---|
| [0] * | No | No external fan is required, that is the motor is derated at low speed. |
| [1] | Yes | Applies an external motor fan (external ventilation), so no derating of the motor is required at low speed. The upper curve in Illustration 3.16 ($f_{out} = 1 \times f_{M,N}$) is followed if the motor current is lower than nominal motor current (see parameter 1-24 Motor Current). If the motor current exceeds nominal current, the operation time still decreases as if no fan was installed. |

1-93 Thermistor Source

Option: Function:

| | | |
|-------|------------------|--|
| | NOTICE | This parameter cannot be adjusted while the motor is running. |
| | NOTICE | Set digital input to [0] PNP - Active at 24 V in parameter 5-00 Digital I/O Mode. |
| | | Select the input to which the thermistor (PTC sensor) should be connected. An analog input option [1] Analog Input 53 or [2] Analog Input 54 cannot be selected if the analog input is already in use as a reference source (selected in parameter 3-15 Reference 1 Source, parameter 3-16 Reference 2 Source or parameter 3-17 Reference 3 Source). |
| | | When using VLT® PTC thermistor card MCB 112, always select [0] None. |
| [0] * | None | |
| [1] | Analog Input 53 | |
| [2] | Analog Input 54 | |
| [3] | Digital input 18 | |
| [4] | Digital input 19 | |
| [5] | Digital input 32 | |

| 1-93 Thermistor Source | | |
|------------------------|---------------------|--|
| Option: | Function: | |
| [6] | Digital input 33 | |

NOTICE

Valid for FC 302 only.

| 1-94 ATEX ETR cur.lim. speed reduction | | |
|--|---|--|
| Range: | Function: | |
| 0 %* [0 - 100 %] | Only visible if parameter 1-90 Motor Thermal Protection is set to [20]. | |

Configure the reaction for operating in Ex-e current limit.
 0%: The frequency converter does not change anything besides issuing *Warning 163 ATEX ETR cur.lim.warning*.
 >0%: The frequency converter issues *Warning 163 ATEX ETR cur.lim.warning* and reduces motor speed following ramp 2 (parameter group 3-5* Ramp 2).

Example:

Actual reference = 50 RPM

Parameter 1-94 ATEX ETR cur.lim. speed reduction = 20%

Resulting reference = 40 RPM

| 1-95 KTY Sensor Type | | |
|----------------------|--|-----------------|
| Option: | Function: | |
| | Select the used type of KTY sensor. FC 302 only. | |
| [0] * | KTY Sensor 1 | 1 kΩ at 100 °C. |
| [1] | KTY Sensor 2 | 1 kΩ at 25 °C. |
| [2] | KTY Sensor 3 | 2 kΩ at 25 °C. |

| 1-96 KTY Thermistor Resource | | |
|------------------------------|--|--|
| Option: | Function: | |
| | NOTICE Valid for FC 302 only. | |
| | Selecting analog input terminal 54 to be used as KTY sensor input. Terminal 54 cannot be selected as KTY source if otherwise used as reference (see parameter 3-15 Reference Resource 1 to parameter 3-17 Reference Resource 3). FC 302 only. | |
| | NOTICE Connection of KTY sensor between term. 54 and 55 (GND). See <i>Illustration 3.15</i> . | |
| [0] * | None | |
| [2] | Analog Input 54 | |

NOTICE

Valid for FC 302 only.

1-97 KTY Threshold level

| Range: | Function: | |
|-----------------------|---|--|
| 80 °C* [-40 - 140 °C] | Select the KTY sensor threshold level for motor thermal protection. | |

1-98 ATEX ETR interpol. points freq.

| Range: | Function: | |
|-------------------------------|-----------|---|
| Size related* [0 - 1000.0 Hz] | | NOTICE Valid for FC 302 only. |

Only visible if parameter 1-90 Motor Thermal Protection is set to [20].

Enter the 4 frequency points [Hz] from the motor nameplate into this array. Together with parameter 1-99 ATEX ETR interpol points current, these can be presented in *Table 3.10*.

NOTICE

All frequency/current limit points from the motor nameplate or motor datasheet must be programmed.

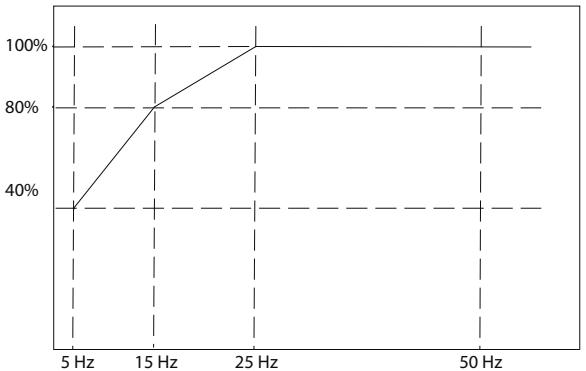

Illustration 3.18 Example of ATEX ETR Thermal Limitation

Curve.

x-axis: f_m [Hz]y-axis: $I_m/I_{m,n} \times 100$ [%]

| Parameter 1-98 ATEX ETR interpol. points freq. | Parameter 1-99 ATEX ETR interpol points current |
|--|---|
| [0]=5 Hz | [0]=40% |
| [1]=15 Hz | [1]=80% |
| [2]=25 Hz | [2]=100% |
| [3]=50 Hz | [3]=100% |

Table 3.10 Interpolation Points

All operating points underneath the curve are allowed continuously. Above the line, however, these are only allowed for a limited time calculated as a function of the

overload. In the event of a machine current greater than 1.5 times the rated current, shut-down is immediate.

1-99 ATEX ETR interpol points current

Only visible if parameter 1-90 Motor Thermal Protection is set to [20] or [21].

Range: Function:

Size related* [0 - 100 %]

NOTICE

Valid for FC 302 only.

Definition of thermal limitation curve.
For example, see parameter 1-98 ATEX ETR interpol. points freq.

Use the 4 current points [A] from the motor nameplate. Calculate the values as percentage of nominal motor current, $I_m/I_{m,n} \times 100 [\%]$, and enter into this array.

Together with parameter 1-98 ATEX ETR interpol. points freq., these constitute a table (f [Hz], I [%]).

NOTICE

All frequency/current limit points from the motor nameplate or motor datasheet must be programmed.

3.3.14 PM Settings

If [2] Std. PM, non-salient is selected in parameter 1-10 Motor Construction, enter the motor parameters manually, in the following order:

1. Parameter 1-24 Motor Current.
2. Parameter 1-26 Motor Cont. Rated Torque.
3. Parameter 1-25 Motor Nominal Speed.
4. Parameter 1-39 Motor Poles.
5. Parameter 1-30 Stator Resistance (R_s).
6. Parameter 1-37 d-axis Inductance (L_d).
7. Parameter 1-40 Back EMF at 1000 RPM.

The following parameters have been added for PM motors.

1. Parameter 1-41 Motor Angle Offset.
2. Parameter 1-07 Motor Angle Offset Adjust.
3. Parameter 1-14 Damping Gain.
4. Parameter 1-47 Torque Calibration.
5. Parameter 1-58 Flying Start Test Pulses Current.
6. Parameter 1-59 Flying Start Test Pulses Frequency.
7. Parameter 1-70 PM Start Mode.
8. Parameter 30-20 High Starting Torque Time [s].
9. Parameter 30-21 High Starting Torque Current [%].

NOTICE

Standard parameters still need configuration (for example parameter 4-19 Max Output Frequency).

| Application | Settings |
|---|---|
| Low inertia applications $I_{Load}/I_{Motor} < 5$ | Increase parameter 1-17 Voltage filter time const. by factor 5–10. Reduce parameter 1-14 Damping Gain. Reduce parameter 1-66 Min. Current at Low Speed (<100%). |
| Low inertia applications $50 > I_{Load}/I_{Motor} > 5$ | Keep calculated values. |
| High inertia applications $I_{Load}/I_{Motor} > 50$ | Increase parameter 1-14 Damping Gain, parameter 1-15 Low Speed Filter Time Const., and parameter 1-16 High Speed Filter Time Const.. |
| High load at low speed <30% (rated speed) | Increase parameter 1-17 Voltage filter time const.. Increase parameter 1-66 Min. Current at Low Speed (>100% for longer time can overheat the motor). |

Table 3.11 Recommendations for VVC+ Applications

If the motor starts oscillating at a certain speed, increase parameter 1-14 Damping Gain. Increase the value in small steps. Depending on the motor, a good value for this parameter can be 10% or 100% higher than the default value.

Adjust starting torque in parameter 1-66 Min. Current at Low Speed. 100% provides nominal torque as starting torque.

| Application | Settings |
|---------------------------|--|
| Low inertia applications | Keep calculated values. |
| High inertia applications | Parameter 1-66 Min. Current at Low Speed. Increase speed to a value between default and maximum depending on application. Set ramp times matching the application. Too fast ramp-up causes an overcurrent/overtorque. Too fast ramp-down causes an overvoltage trip. |
| High load at low speed | Parameter 1-66 Min. Current at Low Speed. Increase speed to a value between default and maximum depending on application. |

Table 3.12 Recommendations for Flux Applications

Adjust starting torque in parameter 1-66 Min. Current at Low Speed. 100% provides nominal torque as starting torque.

3.4 Parameters: 2-** Brakes

3.4.1 2-0* DC brakes

Parameter group for configuring the DC brake and DC hold functions.

| 2-00 DC Hold Current | | |
|----------------------|--------------|--|
| Range: | Function: | |
| 50 %* | [0 - 160 %] | <p>NOTICE</p> <p>The maximum value depends on the rated motor current.</p> <p>Avoid 100% current for too long. It may damage the motor.</p> <p>Low values of DC hold produce larger than expected currents with larger motor power sizes. This error increases as the motor power increases.</p> <p>Enter a value for holding current as a percentage of the rated motor current $I_{M,N}$ set in parameter 1-24 Motor Current. 100% DC hold current corresponds to $I_{M,N}$.</p> <p>This parameter holds the motor function (holding torque) or pre-heats the motor.</p> <p>This parameter is active if <i>DC hold</i> is selected in parameter 1-72 Start Function [0] or parameter 1-80 Function at Stop [1].</p> |

| 2-01 DC Brake Current | | |
|-----------------------|----------------|---|
| Range: | Function: | |
| 50 %* | [0 - 1000 %] | <p>NOTICE</p> <p>The maximum value depends on the rated motor current.</p> <p>Avoid 100% current for too long. It may damage the motor.</p> <p>Enter a value for current as a percentage of the rated motor current $I_{M,N}$, see parameter 1-24 Motor Current. 100% DC brake current corresponds to $I_{M,N}$.</p> <p>DC brake current is applied on a stop command, when the speed is lower than the limit set in parameter 2-03 DC Brake Cut In Speed [RPM]; when the DC Brake Inverse function is active, or via the serial communication port. The braking current is active during the time period set in parameter 2-02 DC Braking Time.</p> |

| 2-02 DC Braking Time | | |
|----------------------|--------------|--|
| Range: | Function: | |
| 10 s* | [0 - 60 s] | Set the duration of the DC brake current set in parameter 2-01 DC Brake Current, once activated. |

2-03 DC Brake Cut In Speed [RPM]

| Range: | Function: |
|---------------|-----------------------|
| Size related* | [0 - par. 4-13 RPM] |

Set the DC brake cut-in speed for activation of the DC brake current set in *parameter 2-01 DC Brake Current*, upon a stop command.

2-04 DC Brake Cut In Speed [Hz]

| Range: | Function: |
|---------------|----------------------|
| Size related* | [0 - par. 4-14 Hz] |

NOTICE

Parameter 2-04 DC Brake Cut In Speed [Hz] is not effective when parameter 1-10 Motor Construction = [1] PM, non-salient SPM.

Set the DC brake cut-in speed for activation of the DC brake current set in *parameter 2-01 DC Brake Current* after a stop command.

2-05 Maximum Reference

| Range: | Function: |
|---------------|--|
| Size related* | [par. 3-02 - 999999.999 ReferenceFeedbackUnit] |

This is an access parameter to parameter 3-03 Maximum Reference for legacy products. The maximum reference is the highest value obtainable by summing all references. The maximum reference unit matches the option selected in parameter 1-00 Configuration Mode and the unit in parameter 3-01 Reference/Feedback Unit.

2-06 Parking Current

| Range: | Function: |
|--------|----------------|
| 50 %* | [0 - 1000 %] |

Set current as percentage of rated motor current, parameter 1-24 Motor Current. Is used when enabled in parameter 1-70 PM Start Mode.

2-07 Parking Time

| Range: | Function: |
|--------|----------------|
| 3 s* | [0.1 - 60 s] |

Set the duration of the parking current set in parameter 2-06 Parking Current, once activated.

3.4.2 2-1* Brake Energy Funct.

Parameter group for selecting dynamic brake parameters. Only valid for frequency converters with brake chopper.

2-10 Brake Function

| Option: | Function: |
|---------|---------------------------------|
| [0] Off | No brake resistor is installed. |

| 2-10 Brake Function | | |
|---------------------|--|--|
| Option: | Function: | |
| [1] Resistor brake | A brake resistor is incorporated in the system, for dissipation of surplus brake energy as heat. Connecting a brake resistor allows a higher DC link voltage during braking (generating operation). The resistor brake function is only active in frequency converters with an integral dynamic brake. | |
| [2] AC brake | Is selected to improve braking without using a brake resistor. This parameter controls an overmagnetisation of the motor when running with a generatoric load. This function can improve the OVC-function. Increasing the electrical losses in the motor allows the OVC function to increase the braking torque without exceeding the overvoltage limit. NOTICE The AC brake is not as efficient as dynamic braking with resistor. AC brake is for VVC ⁺ mode in both open and closed loop. | |

| 2-12 Brake Power Limit (kW) | | |
|-----------------------------|---|---|
| Range: | Function: | |
| | breaking time within the 120 s period, T _{br} . U _{br} is the DC voltage where the brake resistor is active. This depends on the unit as follows: T2 units: 390 V T4 units: 778 V T5 units: 810 V T6 units: 943 V/1099 V for D – F frames T7 units: 1099 V | NOTICE If R _{br} is not known, or if T _{br} is different from 120 s, the practical approach is to run the brake application, readout parameter 16-33 Brake Energy Average and then enter this + 20% in parameter 2-12 Brake Power Limit (kW). |

| 2-11 Brake Resistor (ohm) | | |
|--------------------------------------|--|--|
| Range: | Function: | |
| Size related* [5.00 - 65535.00 Ohm] | Set the brake resistor value in Ω. This value is used for monitoring the power to the brake resistor in parameter 2-13 Brake Power Monitoring. This parameter is only active in frequency converters with an integral dynamic brake. Use this parameter for values without decimals. For a selection with 2 decimals, use parameter 30-81 Brake Resistor (ohm). | |

| 2-13 Brake Power Monitoring | | |
|-----------------------------|---|--|
| Option: | Function: | |
| | This parameter is only active in frequency converters with a brake. | |
| | This parameter enables monitoring of the power to the brake resistor. The power is calculated based on the resistance (parameter 2-11 Brake Resistor (ohm)), the DC-link voltage, and the resistor duty time. | |
| [0] * Off | No brake power monitoring required. | |
| [1] Warning 120s | Activates a warning on the display when the power transmitted during the duty time exceeds 100% of the monitoring limit (parameter 2-12 Brake Power Limit (kW)). The warning disappears when the transmitted power drops below 80% of the monitoring limit. | |
| [2] Trip 120s | Trips the frequency converter and displays an alarm when the calculated power exceeds 100% of the monitoring limit. | |
| [3] Warning & trip 120s | Activates both of the above, including warning, trip, and alarm. | |
| [4] Warning 30s | | |
| [5] Trip 30s | | |
| [6] Warning & trip 30s | | |
| [7] Warning 60s | | |
| [8] Trip 60s | | |
| [9] Warning & trip 60s | | |
| [10] Warning 300s | | |

| 2-12 Brake Power Limit (kW) | | |
|--------------------------------------|--|--|
| Range: | Function: | |
| Size related* [0.001 - 2000.000 kW] | Parameter 2-12 Brake Power Limit (kW) is the expected average power dissipated in the brake resistor over a period of 120 s. It is used as the monitoring limit for parameter 16-33 Brake Energy Average and thereby specifies when a warning/alarm is to be given. To calculate parameter 2-12 Brake Power Limit (kW), the following formula can be used. $P_{br,avg}[W] = \frac{U_{br}^2[V] \times t_{br}[s]}{R_{br}[\Omega] \times T_{br}[s]}$ P _{br,avg} is the average power dissipated in the brake resistor, R _{br} is the resistance of the brake resistor. t _{br} is the active | |

| 2-13 Brake Power Monitoring | | |
|-----------------------------|---------------------|--|
| Option: | Function: | |
| [11] | Trip 300s | |
| [12] | Warning & trip 300s | |
| [13] | Warning 600s | |
| [14] | Trip 600s | |
| [15] | Warning & trip 600s | |

If power monitoring is set to [0] Off or [1] Warning, the brake function remains active, even if the monitoring limit is exceeded. This may lead to thermal overload of the resistor. It is also possible to generate a warning via a relay/digital output. The measuring accuracy of the power monitoring depends on the accuracy of the resistance of the resistor (better than $\pm 20\%$).

| 2-15 Brake Check | | |
|------------------|---|--|
| Option: | Function: | |
| | <p>Parameter 2-15 Brake Check is only active in frequency converters with an integral dynamic brake.</p> <p>Select type of test and monitoring function to check the connection to the brake resistor, or whether a brake resistor is present, and then show a warning or an alarm in the event of a fault.</p> <p>NOTICE</p> <p>The brake resistor disconnection function is tested during power-up. However, the brake IGBT test is performed when there is no braking. A warning or trip disconnects the brake function.</p> <p>The testing sequence is as follows:</p> <ol style="list-style-type: none"> 1. The DC link ripple amplitude is measured for 300 ms without braking. 2. The DC link ripple amplitude is measured for 300 ms with the brake turned on. 3. If the DC link ripple amplitude while braking is lower than the DC link ripple amplitude before braking + 1%: Brake check has failed by returning a warning or alarm. 4. If the DC link ripple amplitude while braking is higher than the DC link ripple amplitude before braking + 1%: Brake check is OK. <p>[0] Off * Monitors brake resistor and brake IGBT for a short circuit during operation. If a short circuit occurs, Warning 25 Brake resistor short-circuited appears.</p> | |

| 2-15 Brake Check | | |
|------------------|---------------|--|
| Option: | Function: | |
| [1] | Warning | Monitors brake resistor and brake IGBT for a short circuit and runs a test for brake resistor disconnection during power-up. |
| [2] | Trip | Monitors for a short circuit or disconnection of the brake resistor, or a short circuit of the brake IGBT. If a fault occurs, the frequency converter cuts out while showing an alarm (trip lock). |
| [3] | Stop and trip | Monitors for a short circuit or disconnection of the brake resistor, or a short circuit of the brake IGBT. If a fault occurs, the frequency converter ramps down to coast and then trips. A trip lock alarm is shown (for example, warning 25, 27, or 28). |
| [4] | AC brake | Monitors for a short circuit or disconnection of the brake resistor, or a short circuit of the brake IGBT. If a fault occurs, the frequency converter performs a controlled ramp down. This option is available for FC 302 only. |
| [5] | Trip Lock | |

NOTICE

Remove a warning arising with [0] Off or [1] Warning by cycling the mains supply. The fault must be corrected first. For [0] Off or [1] Warning, the frequency converter keeps running even if a fault is located.

| 2-16 AC brake Max. Current | | |
|----------------------------|-----------------|---|
| Range: | Function: | |
| 100 %* | [0 - 1000.0 %] | Enter the maximum permissible current when using AC braking to avoid overheating of motor windings. |

NOTICE

Parameter 2-16 AC brake Max. Current has no effect when parameter 1-10 Motor Construction=[1] PM, non salient SPM.

| 2-17 Over-voltage Control | | |
|---------------------------|-----------------------|---|
| Option: | Function: | |
| | | Ovvoltage control (OVC) reduces the risk of the frequency converter tripping due to an overvoltage on the DC-link caused by generative power from the load. |
| [0] * | Disabled | No OVC required. |
| [1] | Enabled (not at stop) | Activates OVC except when using a stop signal to stop the frequency converter. |
| [2] | Enabled | Activates OVC. |

NOTICE

Do not enable OVC in hoisting applications.

| 2-18 Brake Check Condition | | |
|----------------------------|------------------------|--|
| Range: | Function: | |
| [0] * | At Power Up | Brake check is performed at power-up. |
| [1] | After Coast Situations | Brake check is performed after coast situations. |

| 2-19 Over-voltage Gain | | |
|------------------------|-------------|--------------------------|
| Range: | Function: | |
| 100 %* | [0 - 200 %] | Select overvoltage gain. |

3.4.3 2-2* Mechanical Brake

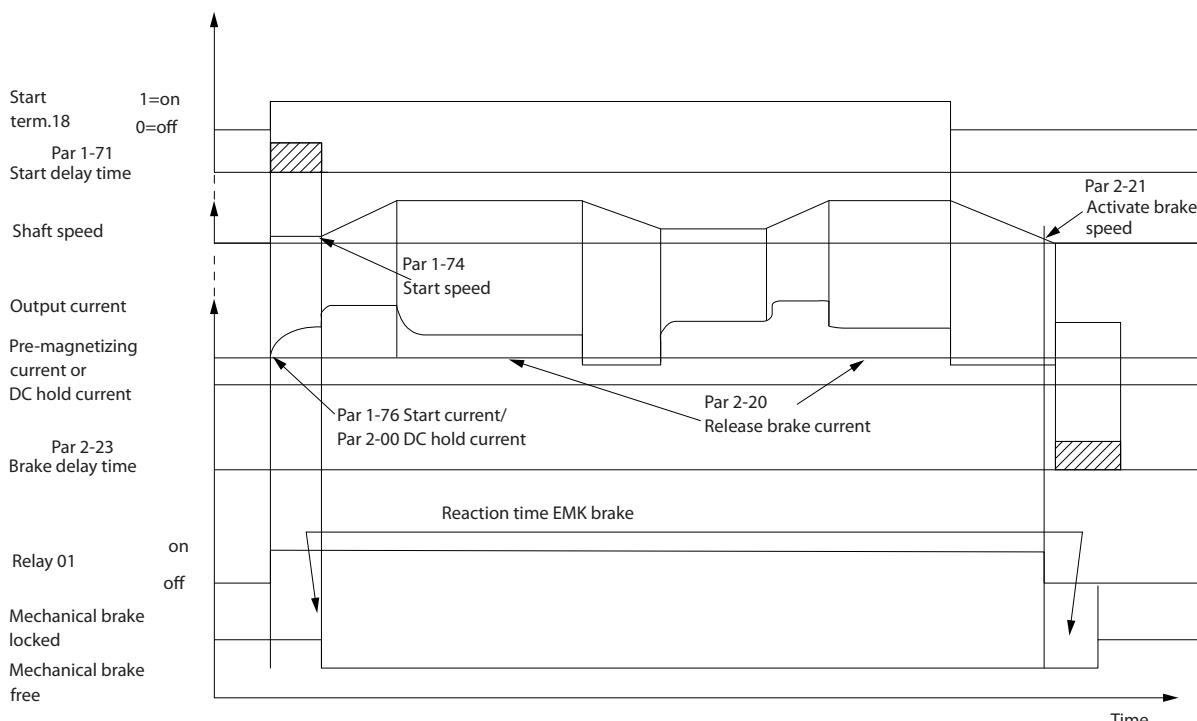

Parameters for controlling operation of an electro-magnetic (mechanical) brake, typically required in hoisting applications.

To control a mechanical braking, a relay output (relay 01 or relay 02) or a programmed digital output (terminal 27 or 29) is required. Normally, this output must be closed during periods when the frequency converter is unable to hold the motor, for example due to an excessive load.

Select [32] *Mechanical Brake Control* for applications with an electro-magnetic brake in *parameter 5-40 Function Relay*, *parameter 5-30 Terminal 27 Digital Output*, or *parameter 5-31 Terminal 29 Digital Output*. When selecting [32] *Mechanical brake control*, the mechanical braking is closed from start-up until the output current is above the level selected in *parameter 2-20 Release Brake Current*. During stop, the mechanical braking activates when the speed drops below the level specified in *parameter 2-21 Activate Brake Speed [RPM]*. If the frequency converter enters an alarm condition, an overcurrent, or overvoltage situation, the mechanical braking immediately cuts in. This is also the case during Safe Torque Off.

NOTICE

Protection mode and trip delay features
(parameter 14-25 Trip Delay at Torque Limit and
parameter 14-26 Trip Delay at Inverter Fault) may delay the activation of the mechanical braking in an alarm condition. These features must be disabled in hoisting applications.

130BA074.12

Illustration 3.19 Mechanical Braking

| 2-20 Release Brake Current | | |
|---|------------------------|--|
| Range: | | Function: |
| Size related* | [0 - par. 16-37 A] | Set the motor current for release of the mechanical braking when a start condition is present. The default value is the maximum current the inverter can provide for the particular power size. The upper limit is specified in parameter 16-37 Inv. Max. Current. |
| NOTICE When mechanical brake control output is selected, but no mechanical braking is connected, the function does not work by default setting due to too low motor current. | | |

| 2-24 Stop Delay | | |
|--------------------------------|------------|--|
| Range: | | Function: |
| 0 s* | [0 - 5 s] | Set the time interval from the moment when the motor is stopped until the brake closes. To adjust transition of the load to the mechanical braking, set parameter 2-23 Activate Brake Delay and parameter 2-24 Stop Delay. This parameter is a part of the stop function. |
| 2-25 Brake Release Time | | |

| 2-21 Activate Brake Speed [RPM] | | |
|---------------------------------|-------------------------|--|
| Range: | | Function: |
| Size related* | [0 - par. 4-53 RPM] | Set the motor speed for activation of the mechanical braking, when a stop condition is present. The upper speed limit is specified in parameter 4-53 Warning Speed High. |

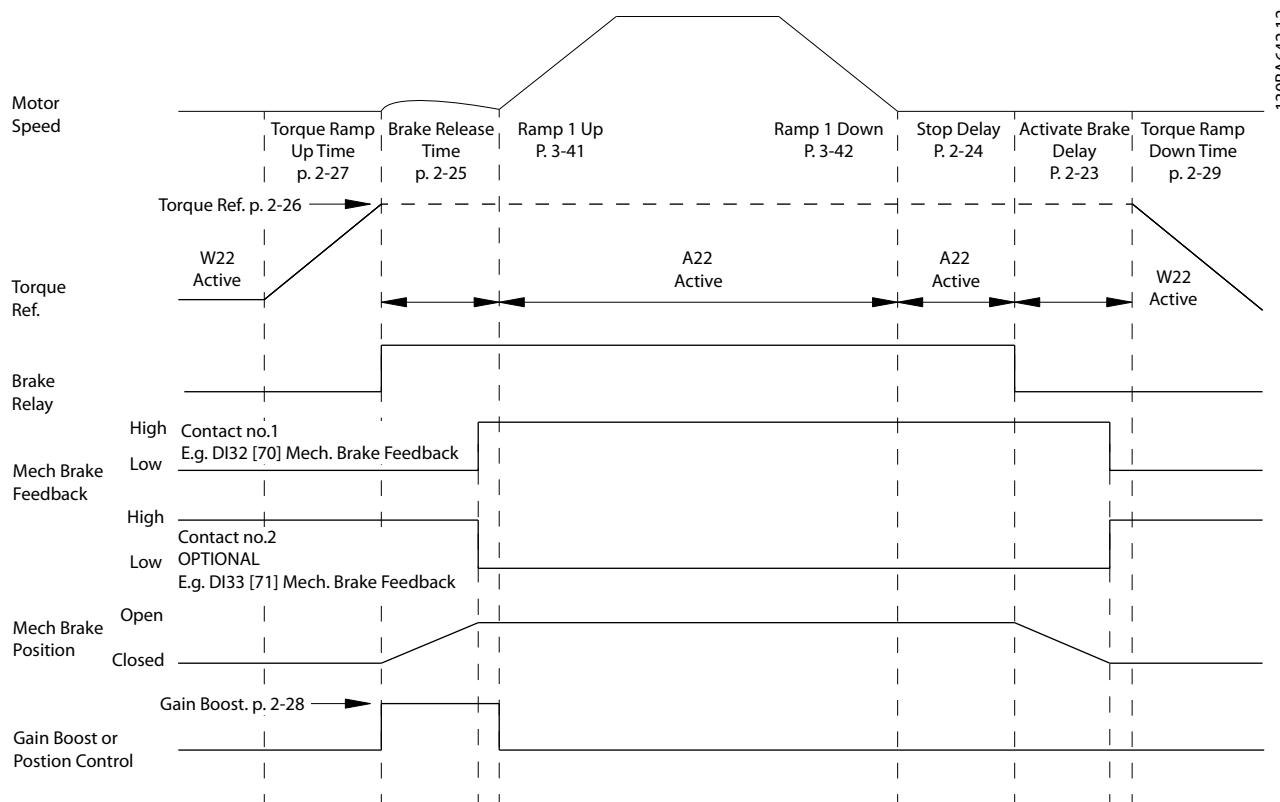

| 2-22 Activate Brake Speed [Hz] | | |
|--------------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0 - 5000.0 Hz] | Set the motor frequency for activation of the mechanical braking when a stop condition is present. |

| 2-23 Activate Brake Delay | | |
|---------------------------|------------|--|
| Range: | | Function: |
| 0 s* | [0 - 5 s] | <p>Enter the brake delay time of the coast after ramp-down time. The shaft is held at zero speed with full holding torque. Ensure that the mechanical braking has locked the load before the motor enters coast mode. See <i>Mechanical Brake Control</i> section in the <i>design guide</i>.</p> <p>To adjust transition of the load to the mechanical braking, set parameter 2-23 Activate Brake Delay and parameter 2-24 Stop Delay.</p> <p>Setting of brake delay parameters does not affect the torque. The frequency converter does not register that mechanical braking is holding the load.</p> <p>After setting parameter 2-23 Activate Brake Delay, the torque drops to 0 after a few minutes. The sudden torque change leads to movement and noise.</p> |

3.4.4 Hoist Mechanical Brake

The hoist mechanical break control supports the following functions:

- 2 channels for mechanical braking feedback to offer further protection against unintended behavior resulting from broken cable.
- Monitoring of mechanical braking feedback throughout the complete cycle. This helps protect the mechanical brake, especially if more frequency converters are connected to the same shaft.
- No ramp-up until feedback confirms that mechanical brake is open.
- Improved load control at stop. If the value of parameter 2-23 Activate Brake Delay is too small, *Warning 22 Hoist mech. brake* is activated and the torque is not allowed to ramp down.
- The transition when motor takes over the load from the brake can be configured. *Parameter 2-28 Gain Boost Factor* can be increased to minimize the movement. To achieve smooth transition, change the setting from the speed control to the position control during the changeover.
 - Set *parameter 2-28 Gain Boost Factor* to 0 to enable position control during *parameter 2-02 DC Braking Time*. This enables *parameter 2-30 Position P Start Proportional Gain* to *parameter 2-33 Speed PID Start Lowpass Filter Time*, which are PID parameters for the position control.

130BA642.12

3

Illustration 3.20 Brake release sequence for hoist mechanical brake control. This brake control is available in flux control principle with feedback or in sensorless mode, available for asynchronous, and non-salient PM motors.

Parameter 2-26 *Torque Ref* to parameter 2-33 *Speed PID Start Lowpass Filter Time* are only available for the hoist mechanical brake control (flux with motor feedback).

| 2-26 Torque Ref | | |
|------------------------|---|--|
| Range: | Function: | |
| 0 % * 300 %] | [-300 - 300 %] The value defines the torque applied against the closed mechanical brake, before release. The torque/load on a crane is positive and is 10-160%. To obtain the best starting point, set parameter 2-26 <i>Torque Ref</i> to approximately 70%. The torque/load on a lift can be both positive and negative and between -160% and +160%. To obtain the best starting point, set parameter 2-26 <i>Torque Ref</i> to 0%. The higher the torque error is (parameter 2-26 <i>Torque Ref</i> vs. actual torque), the more movement during load takeover. | |

| 2-27 Torque Ramp Up Time | | |
|---------------------------------|--|--|
| Range: | Function: | |
| 0.2 s* [0 - 5 s] | The value defines the duration of the torque ramp in clockwise direction. Value 0 enables very fast magnetization in flux control principle. | |

2-28 Gain Boost Factor

Range: **Function:**

| | | |
|----|---------|--|
| 1* | [0 - 4] | Only active in flux closed loop. The function ensures a smooth transition from torque control mode to speed control mode when the motor takes over the load from the brake. Increase to minimize the movement. Activate the advanced mechanical braking (parameter group 2-3* <i>Adv. Mech Brake</i>) by setting parameter 2-28 <i>Gain Boost Factor</i> to 0. |
|----|---------|--|

2-29 Torque Ramp Down Time

Range: **Function:**

| | | |
|------|-----------|------------------------|
| 0 s* | [0 - 5 s] | Torque ramp-down time. |
|------|-----------|------------------------|

3.4.5 2-3* Adv. Mech Brake

Parameter 2-30 *Position P Start Proportional Gain* to parameter 2-33 *Speed PID Start Lowpass Filter Time* can be set up for very smooth transition change from speed control to position control during parameter 2-25 *Brake Release Time* - the time when the load is transferred from the mechanical brake to the frequency converter. Parameter 2-30 *Position P Start Proportional Gain* to parameter 2-33 *Speed PID Start Lowpass Filter Time* are

activated when *parameter 2-28 Gain Boost Factor* is set to 0.
See *Illustration 3.20* for more information.

| 2-30 Position P Start Proportional Gain | | |
|--|--------------------|--|
| Range: | Function: | |
| 0.0000* | [0.0000 - 1.0000] | |
| 2-31 Speed PID Start Proportional Gain | | |
| Range: | Function: | |
| 0.0150* | [0.0000 - 1.0000] | |
| 2-32 Speed PID Start Integral Time | | |
| Range: | Function: | |
| 200.0 ms* | [1.0 - 20000.0 ms] | |
| 2-33 Speed PID Start Lowpass Filter Time | | |
| Range: | Function: | |
| 10.0 ms* | [0.1 - 100.0 ms] | |

3.5 Parameters: 3-** Reference/Ramps

Parameters for handling of reference, definition of limitations, and configuration of the reaction of the frequency converter to changes.

3.5.1 3-0* Reference Limits

| 3-00 Reference Range | | |
|----------------------|-------------|--|
| Option: | | Function: |
| | | Select the range of the reference signal and the feedback signal. Signal values can be positive only, or positive and negative. The minimum limit may have a negative value, unless [1] Speed closed loop control or [3] Process is selected in parameter 1-00 Configuration Mode. |
| [0] | Min - Max | Select the range of the reference signal and the feedback signal. Signal values can be positive only, or positive and negative. The minimum limit may have a negative value, unless [1] Speed closed loop control or [3] Process is selected in parameter 1-00 Configuration Mode. |
| [1] | -Max - +Max | For both positive and negative values (both directions, relative to parameter 4-10 Motor Speed Direction). |

| 3-01 Reference/Feedback Unit | | |
|------------------------------|---------------------|---|
| Option: | | Function: |
| | | Select the unit to be used in process PID control references and feedbacks. Parameter 1-00 Configuration Mode must be either [3] Process or [8] Extended PID Control. |
| [0] | None | |
| [1] | % | |
| [2] | RPM | |
| [3] | Hz | |
| [4] | Nm | |

| 3-02 Minimum/Offset Reference | | |
|-------------------------------|--|-----------|
| Range: | | Function: |
| Size related* | [-999999.999 - 999999.999 ReferenceFeedbackUnit] | |

| | | | | | |
|--|--|--|---|--|--|
| 3-03 Maximum Reference Enter the maximum reference. The maximum reference is the highest value obtainable by summing all references. The maximum reference unit matches: <ul style="list-style-type: none">• The configuration selected in <i>parameter 1-00 Configuration Mode</i>: For [1] Speed closed loop, RPM; for [2] Torque, Nm.• The unit selected in <i>parameter 3-00 Reference Range</i>. If [9] Positioning is selected in <i>parameter 1-00 Configuration Mode</i> , this parameter defines the default speed for positioning. Range: Size related* Function: [0 - 999999.999 ReferenceFeedbackUnit] | | | 3-07 Maximum Position Enter the maximum position. This parameter defines the position range in linear and axis modes (<i>parameter 17-76 Position Axis Mode</i>). Position range limits: <ul style="list-style-type: none">• Linear: <i>Parameter 3-06 Minimum Position</i> to <i>parameter 3-07 Maximum Position</i>.• Rotary: 0–<i>parameter 3-07 Maximum Position</i>. The position limit function uses this parameter (<i>parameter 4-73 Position Limit Function</i>). Range: 100000 CustomReadoutUnit2* Function: [-2000000000 - 2000000000 CustomReadoutUnit2] | | |
| 3-04 Reference Function Option: [0] Sum Function: Sums both external and preset reference sources. [1] External/Preset Function: Use either the preset or the external reference source. Shift between external and preset via a command or a digital input. | | | 3-08 On Target Window The frequency converter considers the positioning completed and sends the on target signal when the actual position is within <i>parameter 3-08 On Target Window</i> for the duration of <i>parameter 3-09 On Target Time</i> and the actual speed is less than <i>parameter 3-05 On Reference Window</i> . Range: 5 CustomReadoutUnit2* Function: [0 - 2000000000 CustomReadoutUnit2] | | |
| 3-05 On Reference Window Enter the tolerance window for on reference or on target status. Depending on the option selected in <i>parameter 1-00 Configuration Mode</i> , this parameter defines the following: <ul style="list-style-type: none">• Speed mode: Speed window for on reference status.• Torque mode: Torque window for on reference status.• Position mode: Speed window for on target status. See also <i>parameter 3-08 On Target Window</i>. Range: Size related* Function: [0 - 999999.999 ReferenceFeedbackUnit] | | | 3-09 On Target Time Enter the time for evaluating the on target window, see also <i>parameter 3-08 On Target Window</i> . Range: 1 ms* Function: [0 - 60000 ms] | | |
| 3-06 Minimum Position Enter the minimum position. This parameter defines the position range in linear axis mode (<i>parameter 17-76 Position Axis Mode</i>) and in the position limit function (<i>parameter 4-73 Position Limit Function</i>). Range: -100000 CustomReadoutUnit2* Function: [-2000000000 - 2000000000 CustomReadoutUnit2] | | | 3.5.2 3-1* References Select the preset reference(s). Select <i>Preset ref. bit 0/1/2 [16], [17], or [18]</i> for the corresponding digital inputs in <i>parameter group 5-1* Digital Inputs</i> . 3-10 Preset Reference Array [8] Range: 0-7 Range: 0 %* Function: [-100 - 100 %] Enter up to 8 different preset references (0-7) in this parameter, using array programming. The preset reference is stated as a percentage of the value <i>Ref_{MAX}</i> (<i>parameter 3-03 Maximum Reference</i>). If a <i>Ref_{MIN}</i> different from 0 (<i>parameter 3-02 Minimum/Offset Reference</i>) is programmed, the preset reference is calculated as a percentage of the full reference range, that is on the basis of the difference between <i>Ref_{MAX}</i> and <i>Ref_{MIN}</i> . Afterwards, the value is added to <i>Ref_{MIN}</i> . When using preset references, select preset reference bit 0/1/2 [16], [17] or [18] for the | | |

| | | |
|---------------|---------------------|---|
| Size related* | [0 - par. 4-14 Hz] | The jog speed is a fixed output speed at which the frequency converter is running, when the jog function is activated. See also <i>parameter 3-80 Jog/Homing Ramp Time</i> . |
|---------------|---------------------|---|

3-12 Catch up/slow Down Value**Range:** **Function:**

| | | |
|------|--------------|---|
| 0 %* | [0 - 100 %] | Enter a percentage (relative) value to be either added to or deducted from the actual reference for catch up or slow down. If <i>catch up</i> is selected via 1 of the digital inputs (<i>parameter 5-10 Terminal 18 Digital Input</i> to <i>parameter 5-15 Terminal 33 Digital Input</i>), the percentage (relative) value is added to the total reference. If <i>slow down</i> is selected via 1 of the digital inputs (<i>parameter 5-10 Terminal 18 Digital Input</i> to <i>parameter 5-15 Terminal 33 Digital Input</i>), the percentage (relative) value is deducted from the total reference. Obtain extended functionality with |
|------|--------------|---|

3-12 Catch up/slow Down Value**Range:** **Function:**

the DigiPot function. See parameter group 3-9* *Digital Potentiometer*.

3-13 Reference Site**Option:** **Function:**

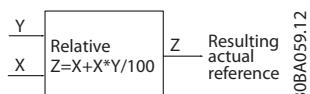

| | | |
|-----|-----------------------|---|
| | | Select which reference site to activate. |
| [0] | Linked to Hand / Auto | Use local reference when in hand-on mode, or remote reference when in auto-on mode. |
| [1] | Remote | Use remote reference in both hand-on mode and auto-on mode. |
| [2] | Local | Use local reference in both hand-on mode and auto-on mode. |
| [3] | Linked to H/A MCO | Select this option to enable the FFACC factor in <i>parameter 32-66 Acceleration Feed-Forward</i> . Enabling FFACC reduces jitter and makes the transmission from the motion controller to the control card of the frequency converter faster. This leads to faster response times for dynamic applications and position control. For more information about FFACC, see <i>VLT® Motion Control MCO 305 Operating Instructions</i> . |

NOTICE

When set to [2] *Local*, the frequency converter starts with this setting again after a power-down.

3-14 Preset Relative Reference**Range:** **Function:**

| | | |
|------|----------------|--|
| 0 %* | [-100 - 100 %] | The actual reference, X, is increased or decreased with the percentage Y, set in <i>parameter 3-14 Preset Relative Reference</i> . This results in the actual reference Z. Actual reference (X) is the sum of the inputs selected in: <ul style="list-style-type: none"> • <i>Parameter 3-15 Reference 1 Source</i>. • <i>Parameter 3-16 Reference 2 Source</i>. • <i>Parameter 3-17 Reference 3 Source</i>. • <i>Parameter 8-02 Control Source</i>. |

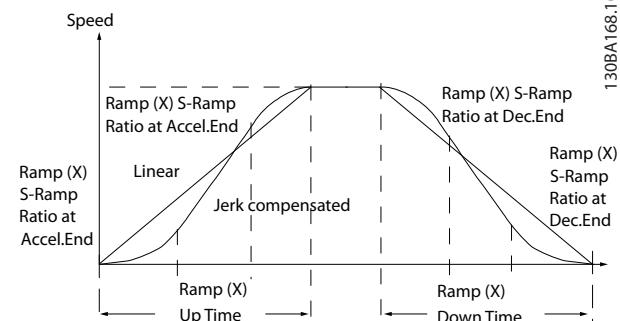

Illustration 3.26 Linear Ramping Times

3.5.4 Ramps**3-4* Ramp 1**

For each of the 4 ramps (parameter groups *3-4* Ramp 1*, *3-5* Ramp 2*, *3-6* Ramp 3*, and *3-7* Ramp 4*) configure the ramp parameters:

- Ramp type,
- Ramping times (duration of acceleration and deceleration), and
- Level of jerk compensation for S-ramps.

Start by setting the linear ramping times corresponding to *Illustration 3.25* and *Illustration 3.26*.

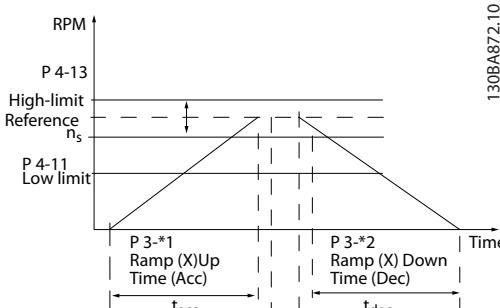

Illustration 3.25 Linear Ramping Times

If S-ramps are selected, then set the level of non-linear jerk compensation required. Set jerk compensation by defining the proportion of ramp-up and ramp-down times where acceleration and deceleration are variable (that is, increasing or decreasing). The S-ramp acceleration and deceleration settings are defined as a percentage of the actual ramp time.

3-40 Ramp 1 Type

Option: Function:

| | | |
|-------|-------------------|--|
| | NOTICE | If [1] S-ramp Const Jerk is selected and the reference during ramping is changed, the ramp time may be prolonged to realize a jerk-free movement, which may result in a longer start or stop time. Extra adjustment of the S-ramp ratios or switching initiators may be necessary. |
| [0] * | Linear | Select the ramp type, depending on requirements for acceleration/deceleration. A linear ramp gives constant acceleration during ramping. An S-ramp gives non-linear acceleration, compensating for jerk in the application. |
| [1] | S-ramp Const Jerk | Acceleration with lowest possible jerk. |
| [2] | S-ramp Const Time | S-ramp based on the values set in parameter 3-41 Ramp 1 Ramp Up Time and parameter 3-42 Ramp 1 Ramp Down Time. |

3-41 Ramp 1 Ramp Up Time

Range: Function:

| | | |
|---------------|-------------------|--|
| Size related* | [0.01 - 3600 s] | Enter the ramp-up time, i.e. the acceleration time from 0 RPM to the synchronous motor speed n_s . Select a ramp-up time which prevents the output current from exceeding the current limit in <i>parameter 4-18 Current Limit</i> during ramping. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-down time in <i>parameter 3-42 Ramp 1 Ramp Down Time</i> . |
| | | $\text{Par. 3-41} = \frac{t_{acc} [\text{s}] \times n_s [\text{RPM}]}{\text{ref} [\text{RPM}]}$ |

3-42 Ramp 1 Ramp Down Time**Range:** **Function:**

| | | |
|--|------------------|--|
| Size related* | [0.01 - 3600 s] | Enter the ramp-down time, i.e. the deceleration time from the synchronous motor speed n_s to 0 RPM. Select a ramp-down time such that no overvoltage occurs in the inverter due to regenerative operation of the motor, and such that the generated current does not exceed the current limit set in parameter 4-18 Current Limit. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-up time in parameter 3-41 Ramp 1 Ramp Up Time. |
| $Par. 3 - 42 = \frac{t_{dec} [s] \times n_s [RPM]}{ref [RPM]}$ | | |

3-45 Ramp 1 S-ramp Ratio at Accel. Start**Range:** **Function:**

| | | |
|-------|-------------|--|
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-up time (parameter 3-41 Ramp 1 Ramp Up Time) in which the acceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks occurring in the application. |
|-------|-------------|--|

3-46 Ramp 1 S-ramp Ratio at Accel. End**Range:** **Function:**

| | | |
|-------|-------------|--|
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-up time (parameter 3-41 Ramp 1 Ramp Up Time) in which the acceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |
|-------|-------------|--|

3-47 Ramp 1 S-ramp Ratio at Decel. Start**Range:** **Function:**

| | | |
|-------|-------------|---|
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-down time (parameter 3-42 Ramp 1 Ramp Down Time) where the deceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |
|-------|-------------|---|

3-48 Ramp 1 S-ramp Ratio at Decel. End**Range:** **Function:**

| | | |
|-------|-------------|---|
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-down time (parameter 3-42 Ramp 1 Ramp Down Time) where the deceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |
|-------|-------------|---|

3.5.5 3-5* Ramp 2

To select ramp parameters, see parameter group 3-4* Ramp 1.

3-50 Ramp 2 Type**Option:** **Function:**

| | | |
|-------|-------------------------|---|
| | | Select the ramp type, depending on requirements for acceleration/deceleration. A linear ramp gives constant acceleration during ramping. An S-ramp gives non-linear acceleration, compensating for jerk in the application. |
| [0] * | Linear | |
| [1] | S-ramp Const Jerk | Acceleration with lowest possible jerk. |
| [2] | S-ramp Const Time | S-ramp based on the values set in parameter 3-51 Ramp 2 Ramp Up Time and parameter 3-52 Ramp 2 Ramp Down Time. |

NOTICE

If [1] S-ramp Const Jerk is selected and the reference during ramping is changed, the ramp time may be prolonged to realise a jerk-free movement, which may result in a longer start or stop time.

Additional adjustment of the S-ramp ratios or switching initiators may be necessary.

3-51 Ramp 2 Ramp Up Time**Range:** **Function:**

| | | |
|--|------------------|--|
| Size related* | [0.01 - 3600 s] | Enter the ramp-up time, that is the acceleration time from 0 RPM to the nominal motor speed n_s . Select a ramp-up time such that the output current does not exceed the current limit in parameter 4-18 Current Limit during ramping. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-down time in parameter 3-52 Ramp 2 Ramp Down Time. |
| $Par. 3 - 51 = \frac{t_{acc} [s] \times n_s [RPM]}{ref [RPM]}$ | | |

3-52 Ramp 2 Ramp Down Time**Range:** **Function:**

| | | |
|---------------|------------------|--|
| Size related* | [0.01 - 3600 s] | Enter the ramp-down time, that is the deceleration time from the nominal motor speed n_s to 0 RPM. Select a ramp-down time such that no overvoltage occurs in the frequency converter due to regenerative operation of the motor, and such that the generated current does not exceed the current limit set in parameter 4-18 Current Limit. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-up time in parameter 3-51 Ramp 2 Ramp Up Time. |
|---------------|------------------|--|

| 3-52 Ramp 2 Ramp Down Time | | |
|----------------------------|--|--|
| Range: | | Function: |
| | | $Par. 3 - 52 = \frac{t_{dec} [s] \times n_s [RPM]}{ref [RPM]}$ |

| 3-55 Ramp 2 S-ramp Ratio at Accel. Start | | |
|--|-------------|---|
| Range: | | Function: |
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-up time (<i>parameter 3-51 Ramp 2 Ramp Up Time</i>) in which the acceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-56 Ramp 2 S-ramp Ratio at Accel. End | | |
|--|-------------|---|
| Range: | | Function: |
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-up time (<i>parameter 3-51 Ramp 2 Ramp Up Time</i>) in which the acceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-57 Ramp 2 S-ramp Ratio at Decel. Start | | |
|--|-------------|--|
| Range: | | Function: |
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-down time (<i>parameter 3-52 Ramp 2 Ramp Down Time</i>) where the deceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-58 Ramp 2 S-ramp Ratio at Decel. End | | |
|--|-------------|--|
| Range: | | Function: |
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-down time (<i>parameter 3-52 Ramp 2 Ramp Down Time</i>) where the deceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

3.5.6 3-6* Ramp 3

Configure ramp parameters, see 3-4* Ramp 1.

| 3-60 Ramp 3 Type | | |
|------------------|--------|---|
| Option: | | Function: |
| | | Select the ramp type, depending on requirements for acceleration and deceleration. A linear ramp gives constant acceleration during ramping. An S-ramp gives non-linear acceleration, compensating for jerk in the application. |
| [0] * | Linear | |

| 3-60 Ramp 3 Type | | |
|------------------|-------------------------|---|
| Option: | | Function: |
| [1] | S-ramp Const Jerk | Accelerates with lowest possible jerk. |
| [2] | S-ramp Const Time | S-ramp based on the values set in <i>parameter 3-61 Ramp 3 Ramp up Time</i> and <i>parameter 3-62 Ramp 3 Ramp down Time</i> . |

NOTICE

If [1] *S-ramp Const Jerk* is selected and the reference during ramping is changed, the ramp time may be prolonged to realize a jerk-free movement, which may result in a longer start or stop time.

Extra adjustment of the S-ramp ratios or switching initiators may be necessary.

| 3-61 Ramp 3 Ramp up Time | | |
|--------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 3600 s] | Enter the ramp-up time, which is the acceleration time from 0 RPM to the nominal motor speed n_s . Select a ramp-up time such that the output current does not exceed the current limit in <i>parameter 4-18 Current Limit</i> during ramping. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-down time in <i>parameter 3-62 Ramp 3 Ramp down Time</i> . |

| 3-62 Ramp 3 Ramp down Time | | |
|--|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 3600 s] | Enter the ramp-down time, which is the deceleration time from the nominal motor speed n_s to 0 RPM. Select a ramp-down time such that no overvoltage occurs in the inverter due to regenerative operation of the motor, and such that the generated current does not exceed the current limit set in <i>parameter 4-18 Current Limit</i> . The value 0.00 corresponds to 0.01 s in speed mode. See ramp-up time in <i>parameter 3-61 Ramp 3 Ramp up Time</i> . |
| $Par. 3 - 62 = \frac{t_{dec} [s] \times n_s [RPM]}{ref [RPM]}$ | | |

| 3-65 Ramp 3 S-ramp Ratio at Accel. Start | | |
|--|-------------|---|
| Range: | | Function: |
| 50 %* | [1 - 99 %] | Enter the proportion of the total ramp-up time (<i>parameter 3-61 Ramp 3 Ramp up Time</i>) in which the acceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-66 Ramp 3 S-ramp Ratio at Accel. End | | |
|--|--|---|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-up time (<i>parameter 3-61 Ramp 3 Ramp up Time</i>) in which the acceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-67 Ramp 3 S-ramp Ratio at Decel. Start | | |
|--|--|--|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-down time (<i>parameter 3-62 Ramp 3 Ramp down Time</i>) where the deceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-68 Ramp 3 S-ramp Ratio at Decel. End | | |
|--|--|--|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-down decel time (<i>parameter 3-62 Ramp 3 Ramp down Time</i>) where the deceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-71 Ramp 4 Ramp up Time | | |
|--------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 3600 s] | Enter the ramp-up time, which is the acceleration time from 0 RPM to the rated motor speed n_s . Select a ramp-up time such that the output current does not exceed the current limit in <i>parameter 4-18 Current Limit</i> during ramping. The value 0.00 corresponds to 0.01 s in speed mode. See ramp-down time in <i>parameter 3-72 Ramp 4 Ramp Down Time</i> . |

$$\text{Par. 3-71} = \frac{t_{acc} [\text{s}] \times n_s [\text{RPM}]}{\text{ref} [\text{RPM}]}$$

| 3-72 Ramp 4 Ramp Down Time | | |
|----------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 3600 s] | Enter the ramp-down time, which is the deceleration time from the nominal motor speed n_s to 0 RPM. Select a ramp-down time such that no overvoltage occurs in the inverter due to regenerative operation of the motor, and such that the generated current does not exceed the current limit set in <i>parameter 4-18 Current Limit</i> . The value 0.00 corresponds to 0.01 s in speed mode. See ramp-up time in <i>parameter 3-71 Ramp 4 Ramp up Time</i> . |

$$\text{Par. 3-72} = \frac{t_{dec} [\text{s}] \times n_s [\text{RPM}]}{\text{ref} [\text{RPM}]}$$

3.5.7 3-7* Ramp 4

Configure ramp parameters, see parameter group 3-4* *Ramp 1*.

| 3-70 Ramp 4 Type | | |
|------------------|-------------------------|---|
| Option: | | Function: |
| | | Select the ramp type, depending on requirements for acceleration and deceleration. A linear ramp gives constant acceleration during ramping. An S-ramp gives non-linear acceleration, compensating for jerk in the application. |
| [0] * | Linear | |
| [1] | S-ramp Const Jerk | Accelerates with lowest possible jerk. |
| [2] | S-ramp Const Time | S-ramp based on the values set in <i>parameter 3-71 Ramp 4 Ramp up Time</i> and <i>parameter 3-72 Ramp 4 Ramp Down Time</i> . |

NOTICE

If [1] *S-ramp Const Jerk* is selected and the reference during ramping is changed, the ramp time may be prolonged to realize a jerk-free movement, which may result in a longer start or stop time.

More adjustments of the S-ramp ratios or switching initiators may be necessary.

| 3-75 Ramp 4 S-ramp Ratio at Accel. Start | | |
|--|--|---|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-up time (<i>parameter 3-71 Ramp 4 Ramp up Time</i>) in which the acceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-76 Ramp 4 S-ramp Ratio at Accel. End | | |
|--|--|---|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-up time (<i>parameter 3-71 Ramp 4 Ramp up Time</i>) in which the acceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-77 Ramp 4 S-ramp Ratio at Decel. Start | | |
|--|--|--|
| Range: | | Function: |
| 50 %* [1 - 99 %] | | Enter the proportion of the total ramp-down time (<i>parameter 3-72 Ramp 4 Ramp Down Time</i>) where the deceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-78 Ramp 4 S-ramp Ratio at Decel. End | |
|--|--|
| Range: | Function: |
| 50 %* [1 - 99 %] | Enter the proportion of the total ramp-down time (<i>parameter 3-72 Ramp 4 Ramp Down Time</i>) where the deceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

| 3-81 Quick Stop Ramp Time | |
|---------------------------|---|
| Range: | Function: |
| | <i>parameter 4-18 Current Limit</i>). Quick stop is activated with a signal on a selected digital input, or via the serial communication port. |

3.5.8 3-8* Other Ramps

| 3-80 Jog/Homing Ramp Time | |
|-------------------------------|--|
| Range: | Function: |
| Size related* [0.01 - 3600 s] | Enter the jog ramp time, i.e. the acceleration/deceleration time between 0 RPM and the rated motor frequency n_s . Ensure that the resulting output current required for the given jog ramp time does not exceed the current limit in <i>parameter 4-18 Current Limit</i> . The jog ramp time starts after activation of a jog signal via the LCP, a selected digital input, or the serial communication port. When jog state is disabled then the normal ramping times are valid. |

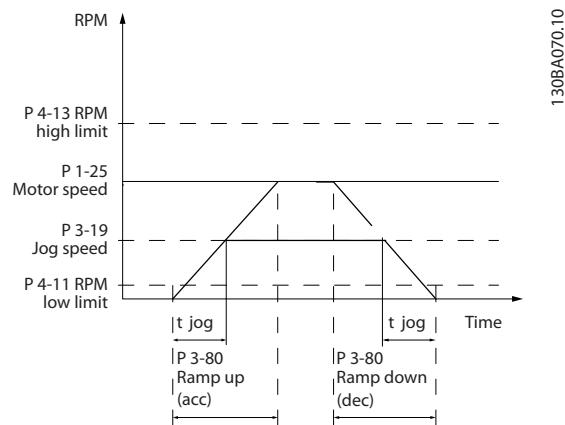

Illustration 3.27 Jog Ramp Time

$$\text{Par. 3 - 80} = \frac{t_{\text{jog}} [\text{s}] \times n_s [\text{RPM}]}{\Delta \text{jog speed (par. 3 - 19)} [\text{RPM}]}$$

| 3-81 Quick Stop Ramp Time | |
|-------------------------------|--|
| Range: | Function: |
| Size related* [0.01 - 3600 s] | Enter the quick-stop ramp-down time, that is the deceleration time from the synchronous motor speed to 0 RPM. Ensure that no resulting overvoltage occurs in the inverter due to regenerative operation of the motor required to achieve the given ramp-down time. Ensure also that the generated current required to achieve the given ramp-down time does not exceed the current limit (set in |

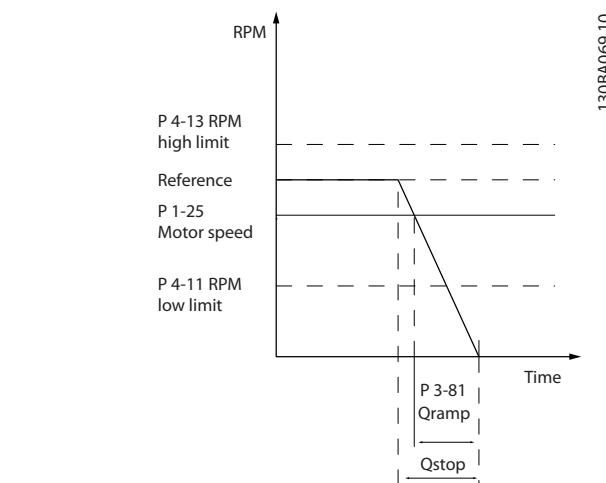

Illustration 3.28 Quick Stop Ramp Time

| 3-82 Quick Stop Ramp Type | |
|---------------------------|---|
| Option: | Function: |
| | Select the ramp type, depending on requirements for acceleration and deceleration. A linear ramp gives constant acceleration during ramping. An S-ramp gives non-linear acceleration, compensating for jerk in the application. |
| [0] * | Linear |
| [1] | S-ramp Const Jerk |
| [2] | S-ramp Const Time |

3-83 Quick Stop S-ramp Ratio at Decel. Start

| 3-83 Quick Stop S-ramp Ratio at Decel. Start | |
|--|--|
| Range: | Function: |
| 50 %* [1 - 99 %] | Enter the proportion of the total ramp-down time (<i>parameter 3-42 Ramp 1 Ramp Down Time</i>) where the deceleration torque increases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

3-84 Quick Stop S-ramp Ratio at Decel. End

| 3-84 Quick Stop S-ramp Ratio at Decel. End | |
|--|--|
| Range: | Function: |
| 50 %* [1 - 99 %] | Enter the proportion of the total ramp-down time (<i>parameter 3-42 Ramp 1 Ramp Down Time</i>) where the deceleration torque decreases. The larger the percentage value, the greater the jerk compensation achieved, and thus the lower the torque jerks in the application. |

3-89 Ramp Lowpass Filter Time

Use this parameter to set how smoothly the speed changes.

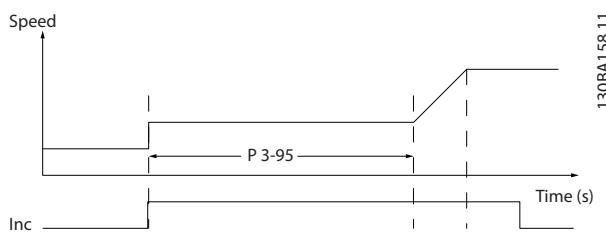

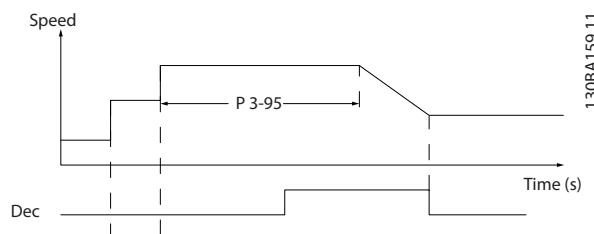

Range: Function:

1 ms*

[1 - 2000 ms]

3.5.9 3-9* Digital Pot.Meter

The digital potentiometer enables increase or decrease of the actual reference by adjusting the set-up of the digital inputs using the functions increase, decrease, or clear. To activate the function, set at least 1 digital input to increase or decrease.

**Illustration 3.29 Increase Actual Reference****Illustration 3.30 Increase/Decrease Actual Reference****3-90 Step Size**

Range: Function:

| | | |
|-------------|----------------|--|
| 0.10 % * | [0.01 - 200 %] | Enter the increment size required for increase/decrease as a percentage of the synchronous motor speed, n_s . If increase/decrease is activated, the resulting reference is increased or decreased by the value set in this parameter. |
|-------------|----------------|--|

3-91 Ramp Time

Range: Function:

| | | |
|------|--------------|--|
| 1 s* | [0 - 3600 s] | Enter the ramp time, that is the time for adjustment of the reference 0–100% of the specified digital potentiometer function (increase, decrease, or clear). If increase/decrease is activated for longer than the ramp delay period specified in parameter 3-95 Ramp Delay, the actual reference is ramped up/down according to this ramp time. The ramp time is defined as the time used to adjust the |
|------|--------------|--|

3-91 Ramp Time

Range: Function:

reference by the step size specified in parameter 3-90 Step Size.

3-92 Power Restore

Option: Function:

| | | |
|-------|-----|---|
| [0] * | Off | Resets the digital potentiometer reference to 0% after power-up. |
| [1] | On | Restores the most recent digital potentiometer reference at power-up. |

3-93 Maximum Limit

Range: Function:

| | | |
|--------|----------------|---|
| 100 %* | [-200 - 200 %] | Set the maximum permissible value for the resulting reference. This is recommended if the digital potentiometer is used for fine-tuning of the resulting reference. |
|--------|----------------|---|

3-94 Minimum Limit

Range: Function:

| | | |
|---------|----------------|---|
| -100 %* | [-200 - 200 %] | Set the minimum permissible value for the resulting reference. This is recommended if the digital potentiometer is used for fine-tuning of the resulting reference. |
|---------|----------------|---|

3-95 Ramp Delay

Range: Function:

| | | |
|---------------|-----------|---|
| Size related* | [0 - 0] | Enter the delay required from activation of the digital potentiometer function until the frequency converter starts to ramp the reference. With a delay of 0 ms, the reference starts to ramp when increase/decrease is activated. See also parameter 3-91 Ramp Time. |
|---------------|-----------|---|

3.6 Parameters: 4-** Limits/Warnings

3.6.1 4-1* Motor Limits

Define torque, current, and speed limits for the motor, and the reaction of the frequency converter when the limits are exceeded.

A limit may generate a message in the display. A warning always generates a message in the display or on the fieldbus. A monitoring function may initiate a warning or a trip, after which the frequency converter stops and generates an alarm message.

| 4-10 Motor Speed Direction | | |
|----------------------------|--|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. | Select the motor speed direction(s) required. Use this parameter to prevent unwanted reversing. When parameter 1-00 Configuration Mode is set to [3] Process, parameter 4-10 Motor Speed Direction is set to [0] Clockwise as default. The setting in parameter 4-10 Motor Speed Direction does not limit options for setting parameter 4-13 Motor Speed High Limit [RPM]. |
| [0] | Clockwise | The reference is set to CW rotation. Reversing input (default terminal 19) must be open. |
| [1] | Counter clockwise | The reference is set to CCW rotation. Reversing input (default terminal 19) must be closed. If reversing is required with reverse input open, the motor direction can be changed by parameter 1-06 Clockwise Direction |
| [2] | Both directions | Allows the motor to rotate in both directions. |

| 4-11 Motor Speed Low Limit [RPM] | | |
|---|---|--|
| Range: | Function: | |
| Size related* [0 - par. 4-13 RPM] | [0 - 1000.0 %] [Application dependent] | Enter the minimum limit for motor speed. The motor speed low limit can be set to correspond to the manufacturer's recommended minimum motor speed. The motor speed low limit must not exceed the setting in parameter 4-13 Motor Speed High Limit [RPM]. |

| 4-12 Motor Speed Low Limit [Hz] | | |
|--|-----------------|---|
| Range: | Function: | |
| Size related* [0 - par. 4-14 Hz] | [0 - 1000.0 %] | Enter the minimum limit for motor speed. The Motor Speed Low Limit can be set to correspond to the minimum output frequency of the motor shaft. The Motor Speed Low Limit must not exceed the |

| 4-12 Motor Speed Low Limit [Hz] | | |
|---------------------------------|-----------|--|
| Range: | Function: | |
| | | setting in parameter 4-14 Motor Speed High Limit [Hz]. |

| 4-13 Motor Speed High Limit [RPM] | | |
|--|--------------------------------------|---|
| Range: | Function: | |
| Size related* [par. 4-11 - 60000 RPM] | [par. 4-12 - par. 4-19 Hz] | Enter the maximum limit for motor speed. The motor speed high limit can be set to correspond to the manufacturer's maximum nominal motor speed. The motor speed high limit must exceed the setting in parameter 4-11 Motor Speed Low Limit [RPM]. |

| 4-14 Motor Speed High Limit [Hz] | | |
|---|---|---|
| Range: | Function: | |
| Size related* [par. 4-12 - par. 4-19 Hz] | [0 - 1000.0 %] [Application dependent] | Enter the maximum limit for motor speed in Hz. Parameter 4-14 Motor Speed High Limit [Hz] can be set to correspond to the manufacturer's recommended maximum motor speed. The motor speed high limit must exceed the value in parameter 4-12 Motor Speed Low Limit [Hz]. The output frequency must not exceed 10% of the switching frequency (parameter 14-01 Switching Frequency). |

| 4-16 Torque Limit Motor Mode | | |
|--|---|--|
| Range: | Function: | |
| Size related* Application dependent* | [0 - 1000.0 %] [Application dependent] | This function limits the torque on the shaft to protect the mechanical installation. |

NOTICE

Changing parameter 4-16 Torque Limit Motor Mode when parameter 1-00 Configuration Mode is set to [0] Speed open loop, parameter 1-66 Min. Current at Low Speed is automatically readjusted.

NOTICE

The torque limit reacts on the actual, non-filtered torque, including torque spikes. This is not the torque that is seen from the LCP or the fieldbus as that torque is filtered.

| 4-17 Torque Limit Generator Mode | | |
|----------------------------------|-----------------|--|
| Range: | Function: | |
| 100 %* | [0 - 1000.0 %] | This function limits the torque on the shaft to protect the mechanical installation. |

| 4-18 Current Limit | | 4-20 Torque Limit Factor Source | |
|---|-----------|--|-----------|
| Range: | Function: | Option: | Function: |
| Size related* [1.0 - 1000.0 %] | | NOTICE If [20] ATEX ETR is selected in parameter 1-90 Motor Thermal Protection, Set parameter 4-18 Current Limit current limit to 150%. | |
| This is a true current limit function that continues in the oversynchronous range. However, due to field weakening the motor torque at current limit will drop accordingly when the voltage increase stops above the synchronized speed of the motor. | | | |
| 4-19 Max Output Frequency | | 4-21 Speed Limit Factor Source | |
| Range: | Function: | Option: | Function: |
| Size related* [1 - 590 Hz] | | NOTICE This parameter cannot be adjusted while the motor is running. | |
| NOTICE Maximum output frequency cannot exceed 10% of the inverter switching frequency (parameter 14-01 Switching Frequency). | | | |
| Provides a final limit on the output frequency for improved safety in applications where overspeeding is to be avoided. This limit is final in all configurations (independent of the setting in parameter 1-00 Configuration Mode). | | | |
| 4-20 Torque Limit Factor Source | | 4-23 Brake Check Limit Factor Source | |
| Option: | Function: | Option: | Function: |
| Select an analog input for scaling the settings in parameter 4-16 Torque Limit Motor Mode and parameter 4-17 Torque Limit Generator Mode 0-100% (or inverse). The signal levels corresponding to 0% and 100% are defined in the analog input scaling, for example parameter group 6-1* Analog Input 1. This parameter is only active when parameter 1-00 Configuration Mode is in Speed Open Loop or Speed Closed Loop. | | Select the input source for the function in parameter 2-15 Brake Check. If several frequency converters are carrying out a brake check simultaneously, the resistance in the grid leads to a voltage drop on the mains or DC-link and a false brake check can occur. Use an external current sensor on every brake resistor. If an application requires a 100% valid brake check, connect the sensor to an analog input. | |
| [0] * No function | | Option: DC-link voltage | |
| [2] Analog in 53 | | Function: The frequency converter performs the brake check by monitoring the DC-link voltage. The frequency converter injects current in the brake resistor which lowers the DC-link voltage. | |
| [4] Analog in 53 inv | | [1] Analog Input 53 | |
| [6] Analog in 54 | | [2] Analog Input 54 | |
| [8] Analog in 54 inv | | | |
| [10] Analog in X30-11 | | | |
| [12] Analog in X30-11 inv | | | |

| 4-24 Brake Check Limit Factor | | |
|-------------------------------|-------------|---|
| Range: | | Function: |
| 98 %* | [0 - 100 %] | <p>Enter the limit factor that parameter 2-15 Brake Check uses when performing the brake check. The frequency converter uses the limit factor depending on the selection in parameter 4-23 Brake Check Limit Factor Source:</p> <ul style="list-style-type: none"> [0] DC-link voltage - the frequency converter applies the factor to the EEPROM data in the DC-link. [1] Analog Input 53 or [2] Analog Input 54 - the brake check fails if the input current on the analog input is lower than the maximum input current multiplied by the limit factor. <p>For example, in the following configuration the brake check fails if the input current is lower than 16 mA:</p> <ul style="list-style-type: none"> • A current transducer with a range of 4-20 mA is connected to analog input 53. • Parameter 4-24 Brake Check Limit Factor is set to 80%. |

3.6.2 4-3* Motor Feedback Monitoring

The parameter group includes monitoring and handling of motor feedback devices, such as encoders, resolvers, and so on.

| 4-30 Motor Feedback Loss Function | | |
|-----------------------------------|---------------------|---|
| Option: | | Function: |
| | | This function is used to monitor consistency in feedback signal, that is if the feedback signal is available. Select which reaction the frequency converter should take if a feedback fault is detected. The selected action is to take place when the feedback signal differs from the output speed by the value set in parameter 4-31 Motor Feedback Speed Error for longer than the value set in parameter 4-32 Motor Feedback Loss Timeout. |
| [0] | Disabled | |
| [1] | Warning | |
| [2] * | Trip | |
| [3] | Jog | |
| [4] | Freeze Output | |
| [5] | Max Speed | |
| [6] | Switch to Open Loop | |
| [7] | Select Setup 1 | |
| [8] | Select Setup 2 | |
| [9] | Select Setup 3 | |
| [10] | Select Setup 4 | |
| [11] | Stop & Trip | |

Warning 90 Feedback monitor is active as soon as the value in parameter 4-31 Motor Feedback Speed Error is exceeded, regardless of the setting of parameter 4-32 Motor Feedback Loss Timeout. **Warning/Alarm 61, Feedback Error** is related to the motor feedback loss function.

| 4-31 Motor Feedback Speed Error | | |
|---------------------------------|---------------|--|
| Range: | | Function: |
| 300 RPM* | [1 - 600 RPM] | Select the maximum allowed error in speed (output speed vs. feedback). |

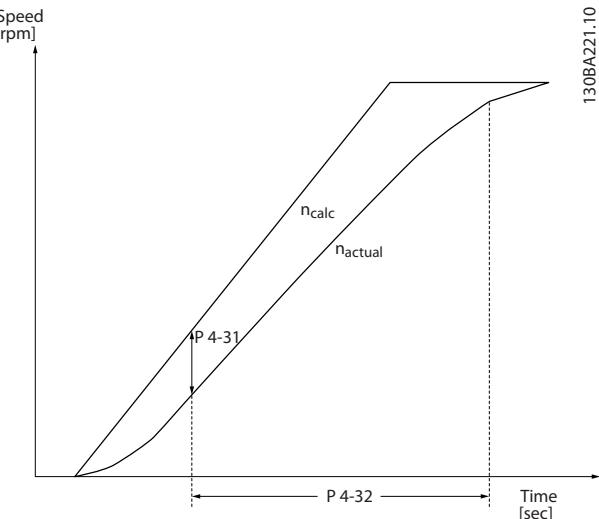

Illustration 3.31 Motor Feedback Speed Error

| 4-32 Motor Feedback Loss Timeout | | |
|----------------------------------|------------|--|
| Range: | | Function: |
| 0.05 s* | [0 - 60 s] | Set the timeout value allowing the speed error set in parameter 4-31 Motor Feedback Speed Error to be exceeded before enabling the function selected in parameter 4-30 Motor Feedback Loss Function. |

| 4-34 Tracking Error Function | | |
|------------------------------|--|--|
| Option: | | Function: |
| | | This function is used to monitor that the application follows the expected speed profile. In closed loop, the speed reference to the PID is compared to the encoder feedback (filtered). In open loop, the speed reference to the PID is compensated for slip and compared to the frequency that is sent to the motor (parameter 16-13 Frequency). The reaction is activated if the measured difference is more than the value specified in parameter 4-35 Tracking Error for the time specified in parameter 4-36 Tracking Error Timeout. A tracking error in closed loop does not imply that there is a problem with the feedback signal. A tracking error can be the result of torque limit at too heavy loads. |

4-34 Tracking Error Function**Option:** **Function:**

| | | |
|-----|-----------------|--|
| [0] | Disable | |
| [1] | Warning | |
| [2] | Trip | |
| [3] | Trip after stop | |

Warning/Alarm 78, Tracking Error is related to the tracking error function.

4-35 Tracking Error**Range:** **Function:**

| | | |
|---------|---------------|---|
| 10 RPM* | [1 - 600 RPM] | Enter the maximum permissible speed error between the motor speed and the output of the ramp when not ramping. In open loop, the motor speed is estimated and in closed loop, it is the feedback from encoder/resolver. |
|---------|---------------|---|

4-36 Tracking Error Timeout**Range:** **Function:**

| | | |
|------|------------|--|
| 1 s* | [0 - 60 s] | Enter the timeout period during which an error greater than the value set in parameter 4-35 Tracking Error is permissible. |
|------|------------|--|

4-37 Tracking Error Ramping**Range:** **Function:**

| | | |
|----------|---------------|---|
| 100 RPM* | [1 - 600 RPM] | Enter the maximum permissible speed error between the motor speed and the output of the ramp when ramping. In open loop, the motor speed is estimated and in closed loop, the encoder measures the speed. |
|----------|---------------|---|

4-38 Tracking Error Ramping Timeout**Range:** **Function:**

| | | |
|------|------------|--|
| 1 s* | [0 - 60 s] | Enter the timeout period during which an error greater than the value set in parameter 4-37 Tracking Error Ramping while ramping is permissible. |
|------|------------|--|

4-39 Tracking Error After Ramping Timeout**Range:** **Function:**

| | | |
|------|------------|--|
| 5 s* | [0 - 60 s] | Enter the timeout period after ramping where parameter 4-37 Tracking Error Ramping and parameter 4-38 Tracking Error Ramping Timeout are still active. |
|------|------------|--|

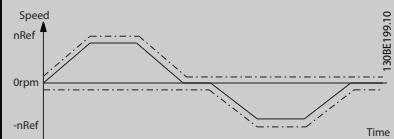

3.6.3 4-4* Speed Monitor**4-43 Motor Speed Monitor Function****Option:** **Function:****NOTICE**

This parameter is only available in the flux control principle.

Select how the frequency converter reacts when the motor speed monitor-function detects overspeed or wrong rotation direction. When the motor speed monitor is active, the frequency converter detects an error if the following conditions are true for a time period specified in parameter 4-45 Motor Speed Monitor Timeout:

- The actual speed differs from the reference speed in parameter 16-48 Speed Ref. After Ramp [RPM].
- The difference between the speeds exceeds the value in parameter 4-44 Motor Speed Monitor Max.

In speed closed loop, the actual speed is the feedback from the encoder measured during the time defined in parameter 7-06 Speed PID Lowpass Filter Time. In open loop, the actual speed is the estimated motor speed.

| | |
|-------------|---|
| Solid line | Parameter 16-48 Speed Ref. After Ramp [RPM] |
| Dotted line | Parameter 4-44 Motor Speed Monitor Max |

Illustration 3.32 Speed Reference and Maximum Allowed Speed Difference

| | | |
|-------|---------------|---|
| [0] * | Disabled | |
| [1] | Warning | The frequency converter reports warning 101, Speed monitor when the speed is outside the limit. |
| [2] | Trip | The frequency converter trips and reports alarm 101, Speed monitor. |
| [3] | Jog | |
| [4] | Freeze Output | |
| [5] | Max Speed | |

| 4-43 Motor Speed Monitor Function | | |
|-----------------------------------|---------------------|--|
| Option: | Function: | |
| [6] | Switch to Open Loop | |
| [7] | Select Setup 1 | |
| [8] | Select Setup 2 | |
| [9] | Select Setup 3 | |
| [10] | Select Setup 4 | |
| [11] | Stop & Trip | |
| [12] | Trip/Warning | The frequency converter reports <i>alarm 101, Speed monitor</i> in running mode and <i>warning 101, Speed monitor</i> in stop or coast mode. This option is only available in closed-loop operation. |
| [13] | Trip/Catch | Select when there is a need to catch a load, for example when mechanical braking fails. This option is available in closed loop only. The frequency converter trips and reports <i>alarm 101, Speed monitor</i> in running mode. In stop mode, the frequency converter catches the flying load and reports <i>warning 101, Speed monitor</i> . In catch mode, the frequency converter applies holding torque to control the zero speed on a potentially malfunctioning brake (closed loop). To exit this mode, send a new start signal to the frequency converter. A coast or Safe Torque Off also terminates the function. |

4-44 Motor Speed Monitor Max

| Range: | Function: |
|----------|----------------|
| 100 RPM* | [10 - 500 RPM] |

4-45 Motor Speed Monitor Timeout

| Range: | Function: |
|--------|------------|
| 0.1 s* | [0 - 60 s] |

3.6.4 4-5* Adjustable Warnings

Use these parameters to adjust warning limits for current, speed, reference, and feedback.

Warnings are shown on the LCP and can be programmed to be outputs or to be readout via fieldbus in the extended status word.

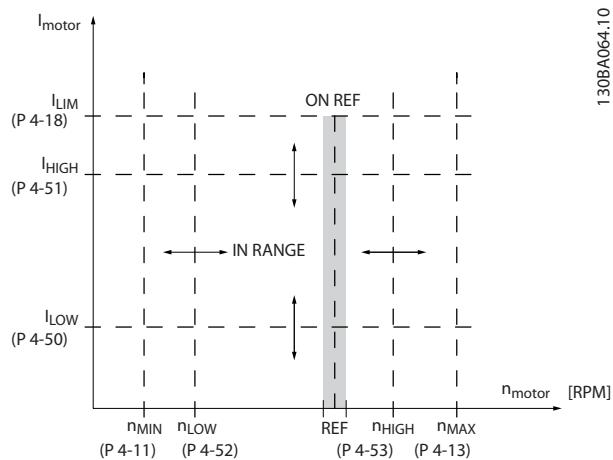

Illustration 3.33 Adjustable Warnings

4-50 Warning Current Low

| Range: | Function: |
|-------------------------|---|
| 0 A* [0 - par. 4-51 A] | Enter the I_{LOW} value. When the motor current falls below this limit, the display reads <i>Current Low</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). Refer to Illustration 3.33. |

4-51 Warning Current High

| Range: | Function: |
|---|---|
| Size related* [par. 4-50 - par. 16-37 A] | Enter the I_{HIGH} value. When the motor current exceeds this limit, the display reads <i>Current High</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). Refer to Illustration 3.33. |

4-52 Warning Speed Low

| Range: | Function: |
|-----------------------------|---|
| 0 RPM* [0 - par. 4-53 RPM] | Enter the n_{LOW} value. When the motor speed exceeds this limit, the display reads <i>Speed low</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). |

4-53 Warning Speed High

| Range: | Function: |
|--|---|
| Size related* [par. 4-52 - 60000 RPM] | Enter the n_{HIGH} value. When the motor speed exceeds this value, the display reads <i>Speed high</i> . The signal outputs can be programmed to produce a status signal on terminals 27 or 29 and on relay outputs 01 or 02. Refer to Illustration 3.33. |

| 4-54 Warning Reference Low | | |
|----------------------------|----------------------------|---|
| Range: | Function: | |
| -999999.999* | [-999999.999 - par. 4-55] | Enter the lower reference limit. When the actual reference drops below this limit, the display indicates <i>RefLow</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). |

| 4-55 Warning Reference High | | |
|-----------------------------|---------------------------|--|
| Range: | Function: | |
| 999999.999* | [par. 4-54 - 999999.999] | Enter the upper reference limit. When the actual reference exceeds this limit, the display reads <i>Refhigh</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). |

| 4-56 Warning Feedback Low | | |
|---------------------------------------|---|--|
| Range: | Function: | |
| -999999.999 ReferenceFeedbackUnit* | [-999999.999 - par. 4-57 ReferenceFeedbackUnit] | Enter the lower feedback limit. When the feedback drops below this limit, the display reads <i>FeedbLow</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). |

| 4-57 Warning Feedback High | | |
|--------------------------------------|--|---|
| Range: | Function: | |
| 999999.999 ReferenceFeedbackUnit* | [par. 4-56 - 999999.999 ReferenceFeedbackUnit] | Enter the upper feedback limit. When the feedback exceeds this limit, the display reads <i>FeedbHigh</i> . The signal outputs can be programmed to produce a status signal on terminal 27 or 29 (FC 302 only) and on relay output 01 or 02 (FC 302 only). |

| 4-58 Missing Motor Phase Function | | |
|-----------------------------------|-----------|--|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. |

| 4-58 Missing Motor Phase Function | | |
|-----------------------------------|--------------------------|---|
| Option: | Function: | |
| | | The missing motor phase function detects whether the motor phase is missing during motor rotation. Shows alarm 30, 31, or 32 in the event of a missing motor phase. Enable this function to avoid motor damage. |
| [0] | Disabled | The frequency converter does not issue a missing motor phase alarm. Not recommended due to risk of motor damage. |
| [1] | Trip 100 ms | For a quick detection time and alarm in the event of a missing motor phase. |
| [2] | Trip 1000 ms | |
| [3] | Trip 100ms 3ph detec. | Special option relevant for crane applications when lowering a small load that lets the frequency converter avoid false detections of missing motor phase. This option is a reduced version of option [1] <i>Trip 100 ms</i> . 1-phase missing is handled as in option [1] <i>Trip 100 ms</i> . 3-phase detection is reduced compared to option [1] <i>Trip 100 ms</i> . The 3-phase detection is only working at start-up and in the low speed range where a significant current is running, avoiding false trips during small motor current. |
| NOTICE | | Only available for FC 302 flux closed loop. |
| [5] | Motor Check | The frequency converter detects automatically when the motor is disconnected and resumes operation once the motor is connected again. |
| NOTICE | | Valid for FC 302 only. |

| 4-59 Motor Check At Start | | |
|---------------------------|-----------|---|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor runs. |
| | | NOTICE Valid for FC 302 only |
| | | Use this parameter to detect the missing motor phase during motor stand-still. Shows alarm 30, <i>Motor phase U missing</i> , alarm 31, <i>Motor phase V missing</i> , or alarm 32, <i>Motor phase W missing</i> in the event of a missing motor phase during stand-still. Use this function before disengaging a mechanical brake. Enable this function to avoid motor damage. |

| 4-59 Motor Check At Start | | |
|---|-----|--|
| Option: Function: | | |
| [0] * | Off | CAUTION RISK OF MOTOR DAMAGE Using this option may lead to a motor damage. The frequency converter does not issue a missing motor phase alarm. |
| [1] On Before each start, the frequency converter checks if all 3 motor phases are present. The check is performed without any movement on ASM motors. For PM and SynRM motors, the check is performed as part of the position detection. | | |

3.6.5 4-6* Speed Bypass

Some systems require that certain output frequencies or speeds are avoided due to resonance problems in the system. A maximum of 4 frequency or speed ranges can be avoided.

| 4-60 Bypass Speed From [RPM] | | |
|------------------------------|-------------------------|---|
| Array [4] | | |
| Range: | | Function: |
| Size related* | [0 - par. 4-13 RPM] | Some systems call for avoiding certain output speeds due to resonance problems in the system. Enter the lower limits of the speeds to be avoided. |

| 4-61 Bypass Speed From [Hz] | | |
|-----------------------------|------------------------|---|
| Array [4] | | |
| Range: | | Function: |
| Size related* | [0 - par. 4-14 Hz] | Some systems require that certain output frequencies or speeds are avoided due to resonance problems in the system. Enter the lower limits of the speeds to be avoided. |

| 4-62 Bypass Speed To [RPM] | | |
|----------------------------|-------------------------|---|
| Array [4] | | |
| Range: | | Function: |
| Size related* | [0 - par. 4-13 RPM] | Some systems call for avoiding certain output speeds due to resonance problems in the system. Enter the upper limits of the speeds to be avoided. |

| 4-63 Bypass Speed To [Hz] | | |
|---------------------------|------------------------|---|
| Array [4] | | |
| Range: | | Function: |
| Size related* | [0 - par. 4-14 Hz] | Some systems call for avoiding certain output speeds due to resonance problems in the system. Enter the upper limits of the speeds to be avoided. |

3.6.6 4-7* Position Monitor

4-70 Position Error Function

Select the function which is activated when the position error exceeds the maximum allowed value. Position error is the difference between the actual position and the commanded position. The position error is the input for the position PI controller.

| Option: Function: | | |
|-------------------|----------|--|
| [0] * | Disabled | The frequency converter does not monitor the position error. |
| [1] | Warning | The frequency converter issues a warning when the maximum allowed position error is exceeded. The frequency converter continues operation. |
| [2] | Trip | The frequency converter trips when the maximum allowed position error is exceeded. |

4-71 Maximum Position Error

Enter the maximum allowed position tracking error in position units defined in parameter group 17-7* Position Scaling. If this value is exceeded during the time set in parameter 4-72 Position Error Timeout the position error function in parameter 4-70 Position Error Function is activated.

| Range: Function: | | |
|--------------------------|---|--|
| 1000 CustomReadoutUnit2* | [-2000000000 - 2000000000 CustomReadoutUnit2] | |

4-72 Position Error Timeout

If the error defined in parameter 4-71 Maximum Position Error is present longer than the time in this parameter, the frequency converter activates the function selected in parameter 4-70 Position Error Function.

| Range: Function: | |
|------------------|--------------------|
| 0.100 s* | [0.000 - 60.000 s] |

| 4-73 Position Limit Function | | |
|-------------------------------------|---------------------------|---|
| Option: | Function: | |
| [0] | Disabled | The frequency converter does not monitor the position limits. |
| [1] | Warning | The frequency converter issues a warning when the position is outside the limits. |
| [2] | Warning & Trip | The frequency converter issues a warning when the set target is outside the position limits. The frequency converter starts the positioning and then trips when the position limit is reached. |
| [3] * | Abs. Pos. Mode Stop | The frequency converter monitors position limits only in absolute positioning mode. The frequency converter issues a warning and stops at the position limit when the target position is outside the position limits. |
| [4] | Abs. Pos. Md. Stop & Trip | The frequency converter monitors position limits only in absolute positioning mode. The frequency converter stops at the position limit and trips when the target position is outside the position limits. |
| [5] | Position Stop | When the set target is outside the position limits, the frequency converter uses the position limit as target. This option works in all modes of operation including speed and torque control. The frequency converter issues a warning when at limit position. |
| [6] | Position Stop & Trip | When the set target is outside the position limits, the frequency converter uses the position limit as target. This option works in all modes of operation including speed and torque control. The frequency converter trips when at limit position. |
| [7] | Speed Stop | When the set target is outside the position limits, the frequency converter performs a ramp down and stops at the limit position. This option works in all modes of operation. The frequency converter issues a warning at stop. |
| [8] | Speed Stop & Trip | When the set target is outside the position limits, the frequency converter performs a ramp down and stops at the limit position. This option works in all modes of operation. The frequency converter trips at stop. |

3.7 Parameters: 5-** Digital In/Out

3.7.1 5-0* Digital I/O Mode

Parameters for configuring the input and output using NPN and PNP.

| 5-00 Digital I/O Mode | | |
|-----------------------|-----|---|
| Option: Function: | | |
| | | Digital inputs and programmed digital outputs are pre-programmable for operation either in PNP or NPN systems. |
| [0] * | PNP | Action on positive directional pulses (↑). PNP systems are pulled down to GND. |
| [1] | NPN | Action on negative directional pulses (↓). NPN systems are pulled up to +24 V, internally in the frequency converter. |

NOTICE

Perform a power cycle to activate the parameter once it has been changed.

| 5-01 Terminal 27 Mode | | |
|-----------------------|--------|--|
| Option: Function: | | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. |
| [0] * | Input | Defines terminal 27 as a digital input. |
| [1] | Output | Defines terminal 27 as a digital output. |

| 5-02 Terminal 29 Mode | | |
|-----------------------|--------|---|
| Option: Function: | | |
| | | NOTICE This parameter is available for FC 302 only. |
| [0] * | Input | Defines terminal 29 as a digital input. |
| [1] | Output | Defines terminal 29 as a digital output. |

3.7.2 5-1* Digital Inputs

The digital inputs are used for selecting various functions in the frequency converter. All digital inputs can be set to the following functions:

Functions in group 1 have higher priority than functions in group 2.

| | |
|---------|--|
| Group 1 | Reset, coast stop, reset, and coast stop, quick stop, DC brake, Stop, and the [Off] key. |
| Group 2 | Start, pulse start, reversing, start reversing, jog, and freeze output. |

Table 3.14 Function Groups

| Digital input function | Select | Terminal |
|------------------------------|--------|----------------------|
| No operation | [0] | All, terminal 32, 33 |
| Reset | [1] | All |
| Coast inverse | [2] | All, terminal 27 |
| Coast and reset inverse | [3] | All |
| Quick stop inverse | [4] | All |
| DC brake inverse | [5] | All |
| Stop inverse | [6] | All |
| Start | [8] | All, terminal 18 |
| Latched start | [9] | All |
| Reversing | [10] | All, terminal 19 |
| Start reversing | [11] | All |
| Enable start forward | [12] | All |
| Enable start reverse | [13] | All |
| Jog | [14] | All, terminal 29 |
| Preset reference on | [15] | All |
| Preset ref bit 0 | [16] | All |
| Preset ref bit 1 | [17] | All |
| Preset ref bit 2 | [18] | All |
| Freeze reference | [19] | All |
| Freeze output | [20] | All |
| Speed up | [21] | All |
| Speed down | [22] | All |
| Set-up select bit 0 | [23] | All |
| Set-up select bit 1 | [24] | All |
| Precise stop inverse | [26] | 18, 19 |
| Precise start, stop | [27] | 18, 19 |
| Catch up | [28] | All |
| Slow down | [29] | All |
| Counter input | [30] | 29, 33 |
| Pulse input edge triggered | [31] | 29, 33 |
| Pulse input time based | [32] | 29, 33 |
| Ramp bit 0 | [34] | All |
| Ramp bit 1 | [35] | All |
| Latched precise start | [40] | 18, 19 |
| Latched precise stop inverse | [41] | 18, 19 |
| External interlock | [51] | – |
| DigiPot increase | [55] | All |
| DigiPot decrease | [56] | All |
| DigiPot clear | [57] | All |
| DigiPot hoist | [58] | All |
| Counter A (up) | [60] | 29, 33 |
| Counter A (down) | [61] | 29, 33 |
| Reset Counter A | [62] | All |
| Counter B (up) | [63] | 29, 33 |

| Digital input function | Select | Terminal |
|-------------------------|--------|---|
| Counter B (down) | [64] | 29, 33 |
| Reset counter B | [65] | All |
| Mech. brake feedb. | [70] | All |
| Mech. brake feedb. inv. | [71] | All |
| PID error inv. | [72] | All |
| PID reset I-part | [73] | All |
| PID enable | [74] | All |
| MCO specific | [75] | - |
| PTC card 1 | [80] | All |
| PROFdrive OFF2 | [91] | - |
| PROFdrive OFF3 | [92] | - |
| Light load detection | [94] | All |
| Mains Loss | [96] | 32, 33 |
| Mains loss inverse | [97] | 32, 33 |
| Start edge triggered | [98] | - |
| Safety option reset | [100] | Resets the safety option. Available only when the safety option is mounted. |
| Start homing | [110] | All |
| Activate touch | [111] | All |
| Relative position | [112] | All |
| Enable reference | [113] | All |
| Sync. to position mode | [114] | All |
| Home sensor | [115] | 18, 32, 33 |
| Home sensor inverse | [116] | 18, 32, 33 |
| Touch sensor | [117] | 18, 32, 33 |
| Touch sensor inverse | [118] | 18, 32, 33 |

Table 3.15 Digital Input Function

VLT® AutomationDrive FC 301/FC 302 standard terminals are 18, 19, 27, 29, 32, and 33. VLT® General Purpose I/O MCB 101 terminals are X30/2, X30/3, and X30/4. Terminal 29 functions as an output only in FC 302.

Functions dedicated to only 1 digital input are stated in the associated parameter.

All digital inputs can be programmed to these functions:

| | | |
|-----|-------------------------|---|
| [0] | No operation | No reaction to signals transmitted to the terminal. |
| [1] | Reset | Resets frequency converter after a trip/alarm. Not all alarms can be reset. |
| [2] | Coast inverse | (Default digital input 27): Coast stop, inverted input (NC). The frequency converter leaves the motor in free mode. Logic 0⇒coast stop. |
| [3] | Coast and reset inverse | Reset and coast stop inverted input (NC). Leaves motor in free mode and resets frequency converter. Logic 0⇒coast stop and reset. |
| [4] | Quick stop inverse | Inverted input (NC). Generates a stop in accordance with quick stop ramp time set in |

| | | |
|------|----------------------|--|
| | | parameter 3-81 Quick Stop Ramp Time. When the motor stops, the shaft is in free mode. Logic 0⇒quick stop. |
| [5] | DC brake inverse | Inverted input for DC brake (NC). Stops motor by energizing it with a DC current for a certain time period. See parameter 2-01 DC Brake Current to parameter 2-03 DC Brake Cut In Speed [RPM]. The function is only active when the value in parameter 2-02 DC Braking Time is different from 0. Logic 0⇒DC brake. |
| [6] | Stop inverse | Stop inverted function. Generates a stop function when the selected terminal goes from logical level 1 to logical level 0. The stop is performed according to the selected ramp time: <ul style="list-style-type: none">• Parameter 3-42 Ramp 1 Ramp Down Time,• Parameter 3-52 Ramp 2 Ramp Down Time,• Parameter 3-62 Ramp 3 Ramp down Time, and• Parameter 3-72 Ramp 4 Ramp Down Time. |
| | | NOTICE When the frequency converter is at the torque limit and has received a stop command, it may not stop by itself. To ensure that the frequency converter stops, configure a digital output to [27] Torque limit and stop. Connect this digital output to a digital input that is configured as coast. |
| [8] | Start | (Default digital input 18): Select start for a start/stop command. Logic 1 = start, logic 0 = stop. |
| [9] | Latched start | If a pulse is applied for minimum 2 ms, the motor starts. The motor stops when stop inverse is activated, or a reset command (via DI) is given. |
| [10] | Reversing | (Default digital input 19). Change the direction of motor shaft rotation. Select logic 1 to reverse. The reversing signal only changes the direction of rotation. It does not activate the start function. Select both directions in parameter 4-10 Motor Speed Direction. The function is not active in process closed loop. |
| [11] | Start reversing | Used for start/stop and for reversing on the same wire. Signals on start are not allowed at the same time. |
| [12] | Enable start forward | Disengages the counterclockwise movement and allows clockwise direction. |
| [13] | Enable start reverse | Disengages the clockwise movement and allows counterclockwise direction. |

| | | |
|------|---------------------|---|
| [14] | Jog | (Default digital input 29): Activate jog speed. See parameter 3-11 Jog Speed [Hz]. |
| [15] | Preset reference on | Shifts between external reference and preset reference. It is assumed that [1] External/preset has been selected in parameter 3-04 Reference Function. Logic 0 = external reference active; logic 1 = 1 of the 8 preset references is active. |
| [16] | Preset ref bit 0 | Preset reference bit 0, 1, and 2 enable a choice between 1 of the 8 preset references according to Table 3.16. |
| [17] | Preset ref bit 1 | Same as [16] Preset ref bit 0. |
| [18] | Preset ref bit 2 | Same as [16] Preset ref bit 0. |

| Preset ref. bit | 2 | 1 | 0 |
|-----------------|---|---|---|
| Preset ref. 0 | 0 | 0 | 0 |
| Preset ref. 1 | 0 | 0 | 1 |
| Preset ref. 2 | 0 | 1 | 0 |
| Preset ref. 3 | 0 | 1 | 1 |
| Preset ref. 4 | 1 | 0 | 0 |
| Preset ref. 5 | 1 | 0 | 1 |
| Preset ref. 6 | 1 | 1 | 0 |
| Preset ref. 7 | 1 | 1 | 1 |

Table 3.16 Preset Reference Bit

| | | |
|------|---------------|---|
| [19] | Freeze ref | Freezes the actual reference, which is now the point of enable/condition to be used for [21] Speed up and [22] Speed down. If speed up/speed down is used, the speed change always follows ramp 2 (parameter 3-51 Ramp 2 Ramp Up Time and parameter 3-52 Ramp 2 Ramp Down Time) in the range 0–parameter 3-03 Maximum Reference. |
| [20] | Freeze output | Freezes the actual motor frequency (Hz), which is now the point of enable/condition to be used for [21] Speed up and [22] Speed down. If speed up/speed down is used, the speed change always follows ramp 2 (parameter 3-51 Ramp 2 Ramp Up Time and parameter 3-52 Ramp 2 Ramp Down Time) in the range 0–parameter 1-23 Motor Frequency. NOTICE When freeze output is active, the frequency converter cannot be stopped via a low [8] Start signal. Stop the frequency converter via a terminal programmed for [2] Coasting inverse or [3] Coast and reset inverse. |
| [21] | Speed up | Select [21] Speed up and [22] Speed down for digital control of the up/down speed (motor potentiometer). Activate this function by selecting either [19] Freeze ref or [20] Freeze output. When speed up/speed down is activated for less than 400 ms, the resulting reference is increased/decreased by 0.1%. If speed up/speed down is activated for more than 400 ms, the resulting reference follows the setting in ramping up/down parameters 3-x1/3-x2. |

| | Shut down | Catch up |
|----------------------|-----------|----------|
| Unchanged speed | 0 | 0 |
| Reduced by %-value | 1 | 0 |
| Increased by %-value | 0 | 1 |
| Reduced by %-value | 1 | 1 |

Table 3.17 Shut Down/Catch Up

| | | |
|------|----------------------|--|
| [22] | Speed down | Same as [21] Speed up. |
| [23] | Set-up select bit 0 | Select [23] Set-up select bit 0 or select [24] Set-up select bit 1 to select 1 of the 4 set-ups. Set parameter 0-10 Active Set-up to Multi Set-up. |
| [24] | Set-up select bit 1 | (Default digital input 32): Same as [23] Set-up select bit 0. |
| [26] | Precise stop inv. | Sends an inverted stop signal when the precise stop function is activated in parameter 1-83 Precise Stop Function. Precise stop inverse function is available for terminals 18 or 19. |
| [27] | Precise start, stop | Use when [0] Precise ramp stop is selected in parameter 1-83 Precise Stop Function. Precise start, stop is available for terminals 18 and 19. Precise start ensures that the rotor turning angle from standing still to reference is the same for each start (for same ramp time, same setpoint). This function is the equivalent to the precise stop where the rotor turning angle from reference to standing still is the same for each stop. When using parameter 1-83 Precise Stop Function option [1] Cnt stop with reset or [2] Cnt stop w/o reset: The frequency converter needs a precise stop-signal before reaching the value of parameter 1-84 Precise Stop Counter Value. If this signal is not supplied, the frequency converter does not stop when the value in parameter 1-84 Precise Stop Counter Value is reached. Trigger precise start, stop by a digital input. The function is available for terminals 18 and 19. |
| [28] | Catch up | Increases reference value by percentage (relative) set in parameter 3-12 Catch up/slow Down Value. |
| [29] | Slow down | Reduces reference value by percentage (relative) set in parameter 3-12 Catch up/slow Down Value. |
| [30] | Counter input | Precise stop function in parameter 1-83 Precise Stop Function acts as counter stop or speed compensated counter stop with or without reset. The counter value must be set in parameter 1-84 Precise Stop Counter Value. |
| [31] | Pulse edge triggered | Counts the number of pulse flanks per sample time. This gives a higher resolution at high |

| | | |
|------|------------------|---|
| | | <p>frequencies, but is not as precise at lower frequencies. Use this pulse principle for encoders with low resolution (for example 30 PPR).</p> <p>Illustration 3.34 Pulse Flanks per Sample Time</p> |
| [32] | Pulse time-based | <p>Measures the duration between pulse flanks. This gives a higher resolution at lower frequencies, but is not as precise at higher frequencies. This principle has a cut-off frequency, which makes it unsuited for encoders with low resolutions (for example 30 PPR) at low speeds.</p> <p>a: Low encoder resolution</p> <p>b: Standard encoder resolution</p> <p>Illustration 3.35 Duration Between Pulse Flanks</p> |
| [34] | Ramp bit 0 | Enables a selection between 1 of the 4 ramps available, according to <i>Table 3.18</i> . |
| [35] | Ramp bit 1 | Same as [34] Ramp bit 0. |

| Preset ramp bit | 1 | 0 |
|-----------------|---|---|
| Ramp 1 | 0 | 0 |
| Ramp 2 | 0 | 1 |
| Ramp 3 | 1 | 0 |
| Ramp 4 | 1 | 1 |

Table 3.18 Preset Ramp Bit

| | | |
|------|-----------------------|---|
| [40] | Latched Precise Start | <p>A latched precise start only requires a pulse of 3 ms on terminals 18 or 19. When using for <i>parameter 1-83 Precise Stop Function</i> [1] Cnt stop with reset or [2] Cnt stop w/o reset:</p> <p>When the reference is reached, the frequency converter internally enables the precise stop-signal. This means that the frequency converter does the precise stop when the counter value of</p> |
|------|-----------------------|---|

| | | |
|------|------------------------------|---|
| | | <p><i>parameter 1-84 Precise Stop Counter Value</i> is reached.</p> |
| [41] | Latched Precise Stop inverse | <p>Sends a latched stop signal when the precise stop function is activated in <i>parameter 1-83 Precise Stop Function</i>. The latched precise stop inverse function is available for terminals 18 or 19.</p> |
| [51] | External interlock | <p>This function makes it possible to give an external fault to the frequency converter. This fault is treated in the same way as an internally generated alarm.</p> |
| [55] | DigiPot Increase | <p>Increase signal to the digital potentiometer function described in parameter group 3-9* <i>Digital Pot. Meter</i>.</p> |
| [56] | DigiPot Decrease | <p>Decrease signal to the digital potentiometer function described in parameter group 3-9* <i>Digital Pot. Meter</i>.</p> |
| [57] | DigiPot Clear | <p>Clears the digital potentiometer reference described in parameter group 3-9* <i>Digital Pot. Meter</i>.</p> |
| [60] | Counter A | (Terminal 29 or 33 only). Input for increment counting in the SLC counter. |
| [61] | Counter A | (Terminal 29 or 33 only). Input for decrement counting in the SLC counter. |
| [62] | Reset Counter A | Input for reset of counter A. |
| [63] | Counter B | (Terminal 29 or 33 only). Input for increment counting in the SLC counter. |
| [64] | Counter B | (Terminal 29 or 33 only). Input for decrement counting in the SLC counter. |
| [65] | Reset Counter B | Input for reset of counter B. |
| [70] | Mech. Brake Feedback | <p>Brake feedback for hoisting applications: Set <i>parameter 1-01 Motor Control Principle</i> to [3] Flux w/ motor feedback; set <i>parameter 1-72 Start Function</i> to [6] Hoist mech brake Ref.</p> |
| [71] | Mech. Brake Feedback inv. | Inverted brake feedback for hoisting applications. |
| [72] | PID error inverse | <p>When enabled, this option inverts the resulting error from the process PID controller. Available only if <i>parameter 1-00 Configuration Mode</i> is set to [6] Surface Winder, [7] Extended PID Speed OL, or [8] Extended PID Speed CL.</p> |
| [73] | PID reset I-part | <p>When enabled, this option resets the I-part of the process PID controller. Equivalent to <i>parameter 7-40 Process PID I-part Reset</i>. Available only if <i>parameter 1-00 Configuration Mode</i> is set to [6] Surface Winder, [7] Extended PID Speed OL, or [8] Extended PID Speed CL.</p> |
| [74] | PID enable | <p>Enables the extended process PID controller. Equivalent to <i>parameter 7-50 Process PID Extended PID</i>. Available only if <i>parameter 1-00 Configuration Mode</i> is set [7]</p> |

| | | | | |
|------|----------------------|---|-------|--------------------|
| | | <i>Extended PID Speed OL or [8] Extended PID Speed CL.</i> | | |
| [80] | PTC Card 1 | All digital inputs can be set to [80] PTC Card 1. However, only 1 digital input must be set to this option. | [100] | Safe Option Reset |
| [91] | PROFIdrive OFF2 | The functionality is the same as the corresponding control word bit of the PROFIBUS/PROFINET option. | [110] | Start Homing |
| [92] | PROFIdrive OFF3 | The functionality is the same as the corresponding control word bit of the PROFIBUS/PROFINET option. | [111] | Activate Touch |
| [94] | Light Load Detection | Evacuation mode for lifts or elevators. The function magnetizes the motor before opening the mechanical brake. The motion starts in the direction (up or down) defined by VLT® Lift Controller MCO 361 using the speed of parameter 30-27 Light Load Speed [%]. This motion continues for the time specified in parameter 30-25 Light Load Delay [s] while measuring the current. If the motor current exceeds the reference current in parameter 30-26 Light Load Current [%], the lift is obstructed. The direction is reversed after the delay time specified in parameter 30-25 Light Load Delay [s]. For the feature to run, a start or start reverse command is needed, together with selecting this digital input. NOTICE Flying start overrules light load detection. | [112] | Relative Position |
| [96] | Mains Loss | Select to improve kinetic back-up. When the mains voltage goes back to a level that is close to (but still lower than) the detection level, the output speed increases and kinetic back-up remains active. To avoid this situation, send a status signal to the frequency converter. When the signal on the digital input is low (0), the frequency converter forcibly turns off the kinetic back-up. NOTICE Only available for pulse inputs at terminals 32/33. | [113] | Enable Reference |
| [97] | Mains Loss Inverse | When the signal on the digital input is high (1), the frequency converter forcibly turns off the kinetic back-up. For more details, see the description of [96] Mains loss. NOTICE Only available for pulse inputs at terminals 32/33. | [115] | Home Sensor |
| [98] | Start edge triggered | Edge-triggered start command. Keeps the start command alive. It can be used for a start push key. | [116] | Home Sensor Inv. |
| | | | [117] | Touch Sensor |
| | | | [118] | Touch Sensor |
| | | | [119] | Sync. to Pos. Mode |

5-10 Terminal 18 Digital Input**Option:** **Function:**

| | | |
|-------|-------|--|
| [8] * | Start | Functions are described under parameter group 5-1* <i>Digital Inputs</i> . |
|-------|-------|--|

5-11 Terminal 19 Digital Input**Option:** **Function:**

| | | |
|--------|-----------|--|
| [10] * | Reversing | Functions are described under parameter group 5-1* <i>Digital Inputs</i> . |
|--------|-----------|--|

| | | |
|-------|---------------|--|
| [2] * | Coast inverse | Functions are described under parameter group 5-1* <i>Digital Inputs</i> . |
|-------|---------------|--|

5-13 Terminal 29 Digital Input**Option:** **Function:**

| | |
|--------|---|
| | NOTICE This parameter is available for FC 302 only. |
| | Select the function from the available digital input range and the additional options [60] Counter A, [61] Counter A, [63] Counter B, and [64] Counter B. Counters are used in smart logic control functions. |
| [14] * | Jog Functions are described under parameter group 5-1* <i>Digital Inputs</i> . |

5-14 Terminal 32 Digital Input**Option:** **Function:**

| | |
|--------------|---|
| | Select the function from the available digital input range. |
| No operation | Functions are described under 5-1* <i>Digital Inputs</i> . |

5-15 Terminal 33 Digital Input**Option:** **Function:**

| | |
|-------|--|
| | Select the function from the available digital input range and the additional options [60] Counter A, [61] Counter A, [63] Counter B and [64] Counter B. Counters are used in smart logic control functions. |
| [0] * | No operation Functions are described under 5-1* <i>Digital Inputs</i> . |

5-16 Terminal X30/2 Digital Input**Option:** **Function:**

| | |
|-------|---|
| [0] * | No operation This parameter is active when option module VLT® General Purpose I/O MCB 101 is installed in the frequency converter. Functions are described under 5-1* <i>Digital Inputs</i> . |
|-------|---|

5-17 Terminal X30/3 Digital Input**Option:** **Function:**

| | |
|-------|---|
| [0] * | No operation This parameter is active when option module VLT® General Purpose I/O MCB 101 is installed in the frequency converter. Functions are described under 5-1* <i>Digital Inputs</i> . |
|-------|---|

5-18 Terminal X30/4 Digital Input**Option:** **Function:**

| | |
|-------|---|
| [0] * | No operation This parameter is active when option module VLT® General Purpose I/O MCB 101 is installed in the frequency converter. Functions are described under 5-1* <i>Digital Inputs</i> . |
|-------|---|

5-19 Terminal 37 Safe Stop

Use this parameter to configure the Safe Torque Off functionality. A warning message makes the frequency converter coast the motor and enables the automatic restart. An alarm message makes the frequency converter coast the motor and requires a manual restart (via a fieldbus, Digital I/O, or by pressing [RESET] on the LCP). When the VLT® PTC Thermistor Card MCB 112 is mounted, configure the PTC options to get the full benefit from the alarm handling.

Option: **Function:**

| | | |
|-----|-------------------|--|
| [1] | Safe Stop Alarm | Coasts frequency converter when Safe Torque Off is activated. Manual reset from LCP, digital input, or fieldbus. |
| [3] | Safe Stop Warning | Coasts the frequency converter when Safe Torque Off is activated (terminal 37 off). When the safe-stop circuit is re-established, the frequency converter continues without manual reset. |
| [4] | PTC 1 Alarm | Coasts frequency converter when Safe Torque Off is activated. Manual reset from LCP, digital input, or fieldbus. |
| [5] | PTC 1 Warning | Coasts frequency converter when Safe Torque Off is activated (terminal 37 off). When Safe Torque Off circuit is re-established, the frequency converter continues without manual reset, unless a digital input set to [80] PTC Card 1 is still enabled. |
| [6] | PTC 1 & Relay A | This option is used when the VLT® PTC Thermistor Card MCB 112 gates with a stop key through a safety relay to terminal 37. Coasts frequency converter when Safe Torque Off is activated. Manual reset from LCP, digital input, or fieldbus. |
| [7] | PTC 1 & Relay W | This option is used when the VLT® PTC Thermistor Card MCB 112 gates with a stop key through a safety relay to terminal 37. Coasts frequency converter when Safe Torque Off is activated (terminal 37 off). When safe-stop circuit is re-established, the frequency converter continues without manual reset, unless a digital input set to [80] PTC Card 1 is still enabled. |
| [8] | PTC 1 & Relay A/W | This option makes it possible to use a combination of Alarm and Warning. |
| [9] | PTC 1 & Relay W/A | This option makes it possible to use a combination of Alarm and Warning. |

NOTICE

Options [4] PTC 1 Alarm to [9] PTC 1 & Relay W/A are only available when the MCB 112 is connected.

NOTICE

Selecting Auto Reset/Warning enables automatic restart of the frequency converter.

| Function | Number | PTC | Relay |
|-------------------------|--------|-----------------------------|-----------------------|
| No Function | [0] | – | – |
| Safe Torque Off Alarm | [1]* | – | Safe Torque Off [A68] |
| Safe Torque Off Warning | [3] | – | Safe Torque Off [W68] |
| PTC 1 Alarm | [4] | PTC 1 Safe Torque Off [A71] | – |
| PTC 1 Warning | [5] | PTC 1 Safe Torque Off [W71] | – |
| PTC 1 & Relay A | [6] | PTC 1 Safe Torque Off [A71] | Safe Torque Off [A68] |
| PTC 1 & Relay W | [7] | PTC 1 Safe Torque Off [W71] | Safe Torque Off [W68] |
| PTC 1 & Relay A/W | [8] | PTC 1 Safe Torque Off [A71] | Safe Torque Off [W68] |
| PTC 1 & Relay W/A | [9] | PTC 1 Safe Torque Off [W71] | Safe Torque Off [A68] |

Table 3.19 Overview of Functions, Alarms, and Warnings

W means warning and A means alarm. For further information, see Alarms and Warnings in the Troubleshooting section in the Design Guide or the Operating Instructions.

A dangerous failure related to Safe Torque Off issues alarm 72, Dangerous Failure.

Refer to Table 5.1.

5-20 Terminal X46/1 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-21 Terminal X46/3 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-22 Terminal X46/5 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-23 Terminal X46/7 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-24 Terminal X46/9 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-25 Terminal X46/11 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

5-26 Terminal X46/13 Digital Input

| Option: | Function: |
|---------|---|
| [0] * | No operation This parameter is active when option module VLT® Extended Relay Card MCB 113 is installed in the frequency converter. Functions are described under parameter group 5-1* Digital Inputs. |

3.7.3 5-3* Digital Outputs

The 2 solid-state digital outputs are common for terminals 27 and 29. Set the I/O function for terminal 27 in parameter 5-01 Terminal 27 Mode, and set the I/O function for terminal 29 in parameter 5-02 Terminal 29 Mode.

NOTICE

These parameters cannot be adjusted while the motor runs.

| | | |
|-----|---------------|--|
| [0] | No operation | Default for all digital outputs and relay outputs. |
| [1] | Control ready | The control card is ready, for example: Feedback from a frequency converter |

| Parameter Descriptions | | Programming Guide | |
|------------------------|-----------------------------|--|--|
| | | controlled by a 24 V external supply (VLT® 24 V DC Supply MCB 107) and the main power to the unit is not detected. | |
| [2] | Drive ready | The frequency converter is ready for operation and applies a supply signal on the control board. | [22] Ready, no thermal warning |
| [3] | Drive ready/remote control | The frequency converter is ready for operation and is in Auto On mode. | [23] Remote, ready, no thermal warning |
| [4] | Enable/no warning | Ready for operation. No start or stop command has been given (start/disable). No warnings are active. | [24] Ready, no over/undervoltage |
| [5] | VLT running | The motor runs and shaft torque is present. | [25] Reverse |
| [6] | Running/no warning | The output speed is higher than the speed set in parameter 1-81 Min Speed for Function at Stop [RPM]. The motor runs and there are no warnings. | [26] Bus OK |
| [7] | Run in range/no warning | Motor runs within the programmed current and speed ranges set in parameter 4-50 Warning Current Low to parameter 4-53 Warning Speed High. There are no warnings. | [27] Torque limit and stop |
| [8] | Run on reference/no warning | Motor runs at reference speed. No warnings. | [28] Brake, no brake warning |
| [9] | Alarm | An alarm activates the output. There are no warnings. | [29] Brake ready, no fault |
| [10] | Alarm or warning | An alarm or a warning activates the output. | [30] Brake fault (IGBT) |
| [11] | At torque limit | The torque limit set in parameter 4-16 Torque Limit Motor Mode or parameter 4-17 Torque Limit Generator Mode has been exceeded. | [31] Relay 123 |
| [12] | Out of current range | The motor current is outside the range set in parameter 4-18 Current Limit. | [32] Mechanical brake control |
| [13] | Below current, low | Motor current is lower than set in parameter 4-50 Warning Current Low. | [33] Safe stop activated (FC 302 only) |
| [14] | Above current, high | Motor current is higher than set in parameter 4-51 Warning Current High. | [35] External Interlock |
| [15] | Out of range | Output frequency is outside the frequency range set in parameter 4-52 Warning Speed Low and parameter 4-53 Warning Speed High. | [40] Out of ref range |
| [16] | Below speed, low | Output speed is lower than the setting in parameter 4-52 Warning Speed Low. | [41] Below reference low |
| [17] | Above speed, high | Output speed is higher than the setting in parameter 4-53 Warning Speed High. | [42] Above reference high |
| [18] | Out of feedback range | Feedback is outside the range set in parameter 4-56 Warning Feedback Low and parameter 4-57 Warning Feedback High. | [43] Extended PID Limit |
| [19] | Below feedback low | Feedback is below the limit set in parameter 4-56 Warning Feedback Low. | |
| [20] | Above feedback high | Feedback is above the limit set in parameter 4-57 Warning Feedback High. | |
| [21] | Thermal warning | The thermal warning turns on when the temperature exceeds the limit in the | |

| | | | | | |
|------|-------------------------|--|-------|---|---|
| [45] | Bus Ctrl | Controls output via bus. The state of the output is set in <i>parameter 5-90 Digital & Relay Bus Control</i> . If a bus timeout occurs, the output state is retained. | | | is executed. The output goes low whenever the smart logic action [32] <i>Set dig. out. A</i> low is executed. |
| [46] | Bus Ctrl On at timeout | Controls output via bus. The state of the output is set in <i>parameter 5-90 Digital & Relay Bus Control</i> . If a bus timeout occurs, the output state is set high (on). | [81] | SL Digital Output B | See <i>parameter 13-52 SL Controller Action</i> . The input goes high whenever the smart logic action [39] <i>Set dig. out. B</i> high is executed. The input goes low whenever the smart logic action [33] <i>Set dig. out. B</i> low is executed. |
| [47] | Bus Ctrl Off at timeout | Controls output via bus. The state of the output is set in <i>parameter 5-90 Digital & Relay Bus Control</i> . If a bus timeout occurs, the output state is set low (off). | [82] | SL Digital Output C | See <i>parameter 13-52 SL Controller Action</i> . The input goes high whenever the smart logic action [40] <i>Set dig. out. C</i> high is executed. The input goes low whenever the smart logic action [34] <i>Set dig. out. C</i> low is executed. |
| [51] | MCO-controlled | Active when a VLT® Advanced Cascade Controller MCO 102 or VLT® Motion Control MCO 305 is connected. The output is controlled from option. | [83] | SL Digital Output D | See <i>parameter 13-52 SL Controller Action</i> . The input goes high whenever the smart logic action [41] <i>Set dig. out. D</i> high is executed. The input goes low whenever the smart logic action [35] <i>Set dig. out. D</i> low is executed. |
| [55] | Pulse output | | [84] | SL Digital Output E | See <i>parameter 13-52 SL Controller Action</i> . The input goes high whenever the smart logic action [42] <i>Set dig. out. E</i> high is executed. The input goes low whenever the smart logic action [36] <i>Set dig. out. E</i> low is executed. |
| [60] | Comparator 0 | See parameter group 13-1* <i>Comparators</i> . If comparator 0 is evaluated as TRUE, the output goes high. Otherwise, it is low. | [85] | SL Digital Output F | See <i>parameter 13-52 SL Controller Action</i> . The input goes high whenever the smart logic action [43] <i>Set dig. out. F</i> high is executed. The input goes low whenever the smart logic action [37] <i>Set dig. out. F</i> low is executed. |
| [61] | Comparator 1 | See parameter group 13-1* <i>Comparators</i> . If Comparator 1 is evaluated as TRUE, the output goes high. Otherwise, it is low. | [90] | kWh counter pulse | Sends a pulse (200 ms pulse width) to output terminal whenever kWh counter changes (<i>parameter 15-02 kWh Counter</i>). |
| [62] | Comparator 2 | See parameter group 13-1* <i>Comparators</i> . If comparator 2 is evaluated as TRUE, the output goes high. Otherwise, it is low. | [120] | Local reference active | Output is high when <i>parameter 3-13 Reference Site</i> = [2] <i>Local</i> . |
| [63] | Comparator 3 | See parameter group 13-1* <i>Comparators</i> . If comparator 3 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | Reference site set in <i>parameter 3-13 Reference Site</i> | Local reference active [120] |
| [64] | Comparator 4 | See parameter group 13-1* <i>Comparators</i> . If comparator 4 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | Reference site: Local <i>parameter 3-13 Reference Site</i> [2] <i>Local</i> | 0 |
| [65] | Comparator 5 | See parameter group 13-1* <i>Comparators</i> . If comparator 5 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | Reference site: Remote <i>parameter 3-13 Reference Site</i> [1] <i>Remote</i> | 1 |
| [70] | Logic Rule 0 | See parameter group 13-4* <i>Logic Rules</i> . If Logic Rule 0 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | Reference site: Linked to Hand/Auto | |
| [71] | Logic Rule 1 | See parameter group 13-4* <i>Logic Rules</i> . If logic rule 1 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | | |
| [72] | Logic Rule 2 | See parameter group 13-4* <i>Logic Rules</i> . If logic rule 2 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | | |
| [73] | Logic Rule 3 | See parameter group 13-4* <i>Logic Rules</i> . If logic rule 3 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | | |
| [74] | Logic Rule 4 | See parameter group 13-4* <i>Logic Rules</i> . If logic rule 4 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | | |
| [75] | Logic Rule 5 | See parameter group 13-4* <i>Logic Rules</i> . If logic rule 5 is evaluated as TRUE, the output goes high. Otherwise, it is low. | | | |
| [80] | SL Digital Output A | See <i>parameter 13-52 SL Controller Action</i> . The output goes high whenever the smart logic action [38] <i>Set dig. out. A</i> high | | | |

| Reference site set in parameter 3-13 Reference Site | Local reference active [120] | Remote reference active [121] |
|---|------------------------------|-------------------------------|
| Hand | 1 | 0 |
| Hand⇒off | 1 | 0 |
| Auto⇒off | 0 | 0 |
| Auto | 0 | 1 |

Table 3.20 Local Reference Active

| | | |
|-------|-------------------------|---|
| [121] | Remote reference active | Output is high when parameter 3-13 Reference Site = [1] Remote or [0] Linked to hand/auto while the LCP is in Auto On mode. See Table 3.20. |
| [122] | No alarm | Output is high when no alarm is present. |
| [123] | Start command active | Output is high when there is an active start command (that is via digital input bus connection, Hand On, or Auto On), and no stop or start command is active. |
| [124] | Running reverse | Output is high when the frequency converter runs counterclockwise (the logical product of the status bits running AND reverse). |
| [125] | Drive in hand mode | Output is high when the frequency converter is in Hand On mode (as indicated by the LED light above [Hand on]). |
| [126] | Drive in Auto mode | Output is high when the frequency converter is in Auto On mode (as indicated by the LED light above [Auto On]). |
| [151] | ATEX ETR cur. alarm | Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If Alarm 164 ATEX ETR cur.lim.alarm is active, the output is 1. |
| [152] | ATEX ETR freq. alarm | Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If Alarm 166 ATEX ETR freq.lim.alarm is active, the output is 1. |
| [153] | ATEX ETR cur. warning | Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If Alarm 163 ATEX ETR cur.lim.warning is active, the output is 1. |
| [154] | ATEX ETR freq. warning | Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If Warning 165 ATEX ETR freq.lim.warning is active, the output is 1. |
| [188] | AHF Capacitor Connect | The capacitors are turned on at 20% (hysteresis of 50% gives an interval of 10-30%). The capacitors are disconnected below 10%. The off delay is 10 s and restarts if the nominal power goes above 10% during the delay. Parameter 5-80 AHF |

| | | |
|-------|----------------------|--|
| [189] | External fan control | Cap Reconnect Delay is used to guarantee a minimum off-time for the capacitors. |
| [190] | Safe Function active | The internal logics for the internal fan control is transferred to this output to make it possible to control an external fan (relevant for hp duct cooling). |
| [191] | Safe Opt. Reset req. | |
| [192] | RS Flipflop 0 | See parameter group 13-1* Comparators. |
| [193] | RS Flipflop 1 | See parameter group 13-1* Comparators. |
| [194] | RS Flipflop 2 | See parameter group 13-1* Comparators. |
| [195] | RS Flipflop 3 | See parameter group 13-1* Comparators. |
| [196] | RS Flipflop 4 | See parameter group 13-1* Comparators. |
| [197] | RS Flipflop 5 | See parameter group 13-1* Comparators. |
| [198] | RS Flipflop 6 | See parameter group 13-1* Comparators. |
| [199] | RS Flipflop 7 | See parameter group 13-1* Comparators. |
| [221] | IGBT-cooling | Use this option for handling the overcurrent trips. When the frequency converter detects an overcurrent condition, it shows alarm 13, Overcurrent and triggers a reset. If the overcurrent condition occurs the third time in a row, the frequency converter shows alarm 13, Overcurrent and initiates a 3 minute delay before the next reset. |
| [222] | Homing OK | Homing is completed with the selected homing function (parameter 17-80 Homing Function). |
| [223] | On Target | Positioning is completed and the on target signal is sent when the actual position is within parameter 3-05 On Reference Window for the duration of parameter 3-09 On Target Time and the actual speed does not exceed parameter 3-05 On Reference Window. |
| [224] | Position Error | The position error exceeds the value in parameter 4-71 Maximum Position Error for the time set in parameter 4-72 Position Error Timeout. |
| [225] | Position Limit | The position is outside the limits set in parameter 3-06 Minimum Position and parameter 3-07 Maximum Position. |
| [226] | Touch on Target | Target position is reached in touch probe position mode. |
| [227] | Touch Activated | Touch probe positioning active. The frequency converter monitors the touch probe sensor input. |

5-30 Terminal 27 Digital Output**Option:** **Function:**

| | | |
|-------|--------------|---|
| [0] * | No operation | Functions are described under parameter group 5-3* Digital Outputs. |
|-------|--------------|---|

5-31 Terminal 29 Digital Output**Option:** **Function:**

| | | |
|-------|--------------|---|
| | | NOTICE This parameter is applicable for FC 302 only. |
| [0] * | No operation | Functions are described under parameter group 5-3* <i>Digital Outputs</i> . |

5-32 Term X30/6 Digi Out (MCB 101)**Option:** **Function:**

| | | |
|------|-----------------------|---|
| [0] | No operation | This parameter is active when option module VLT® General Purpose I/O MCB 101 is mounted in the frequency converter. Functions are described under parameter group 5-3* <i>Digital Outputs</i> . |
| [1] | Control Ready | |
| [2] | Drive ready | |

3.7.4 5-4* Relays

Parameters for configuring the timing and the output functions for the relays.

| 5-40 Function Relay | | |
|---------------------|---|---|
| Option: | Function: | |
| | Relay 1 [0], Relay 2 [1]. VLT® Extended Relay Card MCB 113:Relay 3 [2], Relay 4 [3], Relay 5 [4], Relay 6 [5]. VLT® Relay Card MCB 105: Relay 7 [6], Relay 8 [7], Relay 9 [8]. | |
| [0] | No operation | All digital and relay outputs are by default set to <i>No Operation</i> . |
| [1] | Control Ready | The control card is ready, for example: Feedback from a frequency converter where the control is supplied by an external 24 V supply (VLT® 24 V DC Supply MCB 107) and the main power to frequency converter is not detected. |
| [2] | Drive ready | The frequency converter is ready to operate. Mains and control supplies are OK. |
| [3] | Drive rdy/rem ctrl | The frequency converter is ready for operation and is in <i>Auto On</i> mode. |
| [4] | Enable / no warning | Ready for operation. No start or stop commands have been applied (start/disable). No warnings are active. |
| [5] | Running | The motor is running, and shaft torque is present. |
| [6] | Running / no warning | Output speed is higher than the speed set in parameter 1-81 <i>Min Speed for Function at Stop [RPM]</i> . The motor runs and there are no warnings. |
| [7] | Run in range/no warn | The motor runs within the programmed current and the speed ranges set in parameter 4-50 <i>Warning Current Low</i> and parameter 4-53 <i>Warning Speed High</i> . No warnings. |
| [8] | Run on ref/no warn | The motor runs at reference speed. No warnings. |
| [9] | Alarm | An alarm activates the output. No warnings. |
| [10] | Alarm or warning | An alarm or a warning activates the output. |
| [11] | At torque limit | The torque limit set in parameter 4-16 <i>Torque Limit Motor Mode</i> or parameter 4-17 <i>Torque Limit Generator Mode</i> has been exceeded. |

| 5-40 Function Relay | | |
|---------------------|----------------------|---|
| Option: | Function: | |
| [12] | Out of current range | The motor current is outside the range set in <i>parameter 4-18 Current Limit</i> . |
| [13] | Below current, low | The motor current is lower than set in <i>parameter 4-50 Warning Current Low</i> . |
| [14] | Above current, high | The motor current is higher than set in <i>parameter 4-51 Warning Current High</i> . |
| [15] | Out of speed range | Output speed/frequency is outside the frequency range set in <i>parameter 4-52 Warning Speed Low</i> and <i>parameter 4-53 Warning Speed High</i> . |
| [16] | Below speed, low | Output speed is lower than the setting in <i>parameter 4-52 Warning Speed Low</i> . |
| [17] | Above speed, high | Output speed is higher than the setting in <i>parameter 4-53 Warning Speed High</i> . |
| [18] | Out of feedb. range | Feedback is outside the range set in <i>parameter 4-56 Warning Feedback Low</i> and <i>parameter 4-57 Warning Feedback High</i> . |
| [19] | Below feedback, low | Feedback is below the limit set in <i>parameter 4-56 Warning Feedback Low</i> . |
| [20] | Above feedback, high | Feedback is above the limit set in <i>parameter 4-57 Warning Feedback High</i> . |
| [21] | Thermal warning | Thermal warning turns on when the temperature exceeds the limit either in motor, frequency converter, brake resistor, or connected thermistor. |
| [22] | Ready,no thermal W | The frequency converter is ready for operation and there is no overtemperature warning. |
| [23] | Remote,ready,no TW | The frequency converter is ready for operation and is in <i>Auto On</i> mode. There is no overtemperature warning. |
| [24] | Ready, Voltage OK | Frequency converter is ready for operation and the mains voltage is within the specified voltage range (see <i>General Specifications</i> section in <i>design guide</i>). |
| [25] | Reverse | The motor runs (or is ready to run) clockwise when logic=0 and counter-clockwise when logic=1. The output changes as soon as the reversing signal is applied. |
| [26] | Bus OK | Active communication (no timeout) via the serial communication port. |
| [27] | Torque limit & stop | Use in performing a coasted stop and frequency converter in torque limit condition. If the frequency converter |

| 5-40 Function Relay | | |
|---------------------|---|---|
| Option: | Function: | |
| | has received a stop signal and is in torque limit, the signal is logic 0. | |
| [28] | Brake, no brake war | Brake is active and there are no warnings. |
| [29] | Brake ready, no fault | Brake is ready for operation and there are no faults. |
| [30] | Brake fault (IGBT) | Output is logic 1 when the brake IGBT is short-circuited. Use this function to protect the frequency converter if there is a fault on the brake module. Use the digital output/relay to cut out the main voltage from the frequency converter. |
| [31] | Relay 123 | Digital output/relay is activated when [0] <i>Control Word</i> is selected in parameter group 8-** <i>Comm. and Options.</i> |
| [32] | Mech brake ctrl | Selection of mechanical brake control. When selected parameters in parameter group 2-2* <i>Mechanical Brake</i> are active. The output must be reinforced to carry the current for the coil in the brake. Usually, solved by connecting an external relay to the selected digital output. |
| [33] | Safe stop active | <p>NOTICE</p> <p>This option is applicable for FC 302 only.</p> <p>Indicates that the Safe Torque Off on terminal 37 has been activated.</p> |
| [36] | Control word bit 11 | Activate relay 1 by control word from fieldbus. No other functional impact in the frequency converter. Typical application: Controlling auxiliary device from fieldbus. The function is valid when [0] <i>FC profile</i> in parameter 8-10 <i>Control Word Profile</i> is selected. |
| [37] | Control word bit 12 | Activate relay 2 (FC 302 only) by control word from fieldbus. No other functional impact in the frequency converter. Typical application: Controlling auxiliary device from fieldbus. The function is valid when [0] <i>FC profile</i> in parameter 8-10 <i>Control Word Profile</i> is selected. |
| [38] | Motor feedback error | Failure in the speed feedback loop from motor running in closed loop. The output can eventually be used to prepare switching the frequency |

| 5-40 Function Relay | | |
|---------------------|------------------------|---|
| Option: | Function: | |
| | | converter in open loop in emergency case. |
| [39] | Tracking error | When the difference between calculated speed and actual speed in parameter 4-35 <i>Tracking Error</i> is larger than selected, the digital output/relay is active. |
| [40] | Out of ref range | Active when the actual speed is outside settings in parameter 4-52 <i>Warning Speed Low</i> to parameter 4-55 <i>Warning Reference High</i> . |
| [41] | Below reference, low | Active when actual speed is below speed reference setting. |
| [42] | Above ref, high | Active when actual speed is above speed reference setting. |
| [43] | Extended PID Limit | |
| [45] | Bus ctrl. | Controls digital output/relay via bus. The state of the output is set in parameter 5-90 <i>Digital & Relay Bus Control</i> . The output state is retained in the event of bus time-out. |
| [46] | Bus ctrl, 1 if timeout | Controls output via bus. The state of the output is set in parameter 5-90 <i>Digital & Relay Bus Control</i> . If a bus time-out occurs, the output state is set high (on). |
| [47] | Bus ctrl, 0 if timeout | Controls output via bus. The state of the output is set in parameter 5-90 <i>Digital & Relay Bus Control</i> . If a bus time-out occurs, the output state is set low (Off). |
| [50] | On Reference | |
| [60] | Comparator 0 | See parameter group 13-1* <i>Comparators</i> . If comparator 0 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [61] | Comparator 1 | See parameter group 13-1* <i>Comparators</i> . If comparator 1 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [62] | Comparator 2 | See parameter group 13-1* <i>Comparators</i> . If comparator 2 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [63] | Comparator 3 | See parameter group 13-1* <i>Comparators</i> . If comparator 3 in SLC is TRUE, the output goes high. Otherwise, it is low. |

| 5-40 Function Relay | | |
|---------------------|---------------------|--|
| Option: | Function: | |
| [64] | Comparator 4 | See parameter group 13-7* <i>Comparators</i> . If comparator 4 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [65] | Comparator 5 | See parameter group 13-1* <i>Smart Logic Control</i> . If comparator 5 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [70] | Logic rule 0 | See parameter group 13-4* <i>Smart Logic Control</i> . If logic rule 0 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [71] | Logic rule 1 | See parameter group 13-4* <i>Smart Logic Control</i> . If Logic Rule 1 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [72] | Logic rule 2 | See parameter group 13-4* <i>Smart Logic Control</i> . If logic rule 2 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [73] | Logic rule 3 | See parameter group 13-4* <i>Smart Logic Control</i> . If logic rule 3 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [74] | Logic rule 4 | See parameter group 13-4* <i>Smart Logic Control</i> . If logic rule 4 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [75] | Logic rule 5 | See parameter group 13-4* <i>Smart Logic Control</i> . If logic rule 5 in SLC is TRUE, the output goes high. Otherwise, it is low. |
| [80] | SL digital output A | See parameter 13-52 <i>SL Controller Action</i> . Output A is low on smart logic action [32]. Output A is high on smart logic action [38]. |
| [81] | SL digital output B | See parameter 13-52 <i>SL Controller Action</i> . Output B is low on smart logic action [33]. Output B is high on smart logic action [39]. |
| [82] | SL digital output C | See parameter 13-52 <i>SL Controller Action</i> . Output C is low on smart logic action [34]. Output C is high on smart logic action [40]. |
| [83] | SL digital output D | See parameter 13-52 <i>SL Controller Action</i> . Output D is low on smart logic action [35]. Output D is high on smart logic action [41]. |
| [84] | SL digital output E | See parameter 13-52 <i>SL Controller Action</i> . Output E is low on smart logic |

| 5-40 Function Relay | | |
|-----------------------------------|---|--|
| Option: | Function: | |
| | | action [36]. Output E is high on smart logic action [42]. |
| [85] | SL digital output F | See parameter 13-52 <i>SL Controller Action</i> . Output F is low on smart logic action [37]. Output F is high on smart logic action [43]. |
| [120] | Local ref active | Output is high when parameter 3-13 <i>Reference Site</i> = [2] Local or when parameter 3-13 <i>Reference Site</i> = [0] Linked to hand auto at the same time as the LCP is in <i>Hand On</i> mode. |
| | Reference site set in parameter 3-13 Reference Site | Local reference active [120] |
| | Reference site: Local parameter 3-13 Reference Site [2] Local | 1 0 |
| | Reference site: Remote parameter 3-13 Reference Site [1] Remote | 0 1 |
| | Reference site: Linked to Hand/Auto | |
| | Hand | 1 0 |
| | Hand⇒off | 1 0 |
| | Auto⇒off | 0 0 |
| | Auto | 0 1 |
| Table 3.21 Local Reference Active | | |
| [121] | Remote ref active | Output is high when parameter 3-13 <i>Reference Site</i> = [1] Remote or [0] Linked to hand/auto while the LCP is in <i>Auto On</i> mode. See Table 3.21. |
| [122] | No alarm | Output is high when no alarm is present. |
| [123] | Start command activ | Output is high when the start command is high (that is via digital input, bus connection, [Hand On], or [Auto On]), and a stop has been last command. |
| [124] | Running reverse | Output is high when the frequency converter is running counter clockwise |

| 5-40 Function Relay | |
|----------------------------|---|
| Option: | Function: |
| | (the logical product of the status bits <i>running AND reverse</i>). |
| [125] | Drive in hand mode Output is high when the frequency converter is in <i>Hand On</i> mode (as indicated by the LED light above [Hand on]). |
| [126] | Drive in auto mode Output is high when the frequency converter is in <i>Auto On</i> mode (as indicated by LED on above Auto On]). |
| [151] | ATEX ETR cur. alarm Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If alarm 164, ATEX ETR cur.lim.alarm is active, the output is 1. |
| [152] | ATEX ETR freq. alarm Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If alarm 166, ATEX ETR freq.lim.alarm is active, the output is 1. |
| [153] | ATEX ETR cur. warning Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If alarm 163, ATEX ETR cur.lim.warning is active, the output is 1. |
| [154] | ATEX ETR freq. warning Selectable if parameter 1-90 Motor Thermal Protection is set to [20] ATEX ETR or [21] Advanced ETR. If warning 165, ATEX ETR freq.lim.warning is active, the output is 1. |
| [188] | AHF Capacitor Connect |
| [189] | External Fan Control The internal logics for the internal fan control is transferred to this output to make it possible to control an external fan (relevant for HP duct cooling). |
| [190] | Safe Function active |
| [191] | Safe Opt. Reset req. |
| [192] | RS Flipflop 0 See 13-1* Comparators. |
| [193] | RS Flipflop 1 See 13-1* Comparators. |
| [194] | RS Flipflop 2 See 13-1* Comparators. |
| [195] | RS Flipflop 3 See 13-1* Comparators. |
| [196] | RS Flipflop 4 See 13-1* Comparators. |
| [197] | RS Flipflop 5 See 13-1* Comparators. |
| [198] | RS Flipflop 6 See 13-1* Comparators. |
| [199] | RS Flipflop 7 See 13-1* Comparators. |

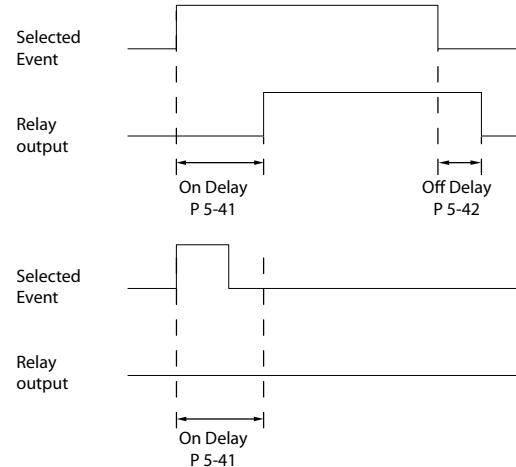

| 5-40 Function Relay | |
|----------------------------|---|
| Option: | Function: |
| [222] | Homing Ok Homing is completed with the selected homing function (parameter 17-80 Homing Function). |
| [223] | On Target Positioning is completed and the on target signal is sent when the actual position is within parameter 3-05 On Reference Window for the duration of parameter 3-09 On Target Time and the actual speed does not exceed parameter 3-05 On Reference Window. |
| [224] | Position Error The position error exceeds the value in parameter 4-71 Maximum Position Error for the time set in parameter 4-72 Position Error Timeout. |
| [225] | Position Limit The position is outside the limits set in parameter 3-06 Minimum Position and parameter 3-07 Maximum Position. |
| [226] | Touch on Target Target position is reached in touch probe position mode. |
| [227] | Touch Activated Touch probe positioning active. The frequency converter monitors the touch probe sensor input. |

5-41 On Delay, Relay

Array [20]

Range: **Function:**

| | | |
|---------|----------------|---|
| 0.01 s* | [0.01 - 600 s] | Enter the delay of the relay cut in time. Select 1 of 2 internal mechanical relays in an array function. See parameter 5-40 Function Relay for details. |
|---------|----------------|---|

130BA171.10

Illustration 3.36 On Delay, Relay

| 5-42 Off Delay, Relay | | |
|------------------------|---|--|
| Array[20] | | |
| Range: | Function: | |
| 0.01 s* [0.01 - 600 s] | Enter the delay of the relay cut out time. Select 1 of 2 internal mechanical relays in an array function. See <i>parameter 5-40 Function Relay</i> for details. If the selected event condition changes before a delay timer expires, the relay output is unaffected. | |

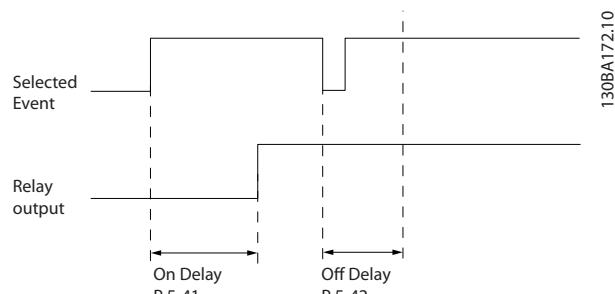

Illustration 3.37 Off Delay, Relay

If the selected event condition changes before the on delay or off delay timer expires, the relay output is unaffected.

3.7.5 5-5* Pulse Input

The pulse input parameters are used to define an appropriate window for the impulse reference area by configuring the scaling and filter settings for the pulse inputs. Input terminals 29 or 33 act as frequency reference inputs. Set terminal 29 (*parameter 5-13 Terminal 29 Digital Input*) or terminal 33 (*parameter 5-15 Terminal 33 Digital Input*) to [32] *Pulse input*. If terminal 29 is used as an input, set *parameter 5-01 Terminal 27 Mode* to [0] *Input*.

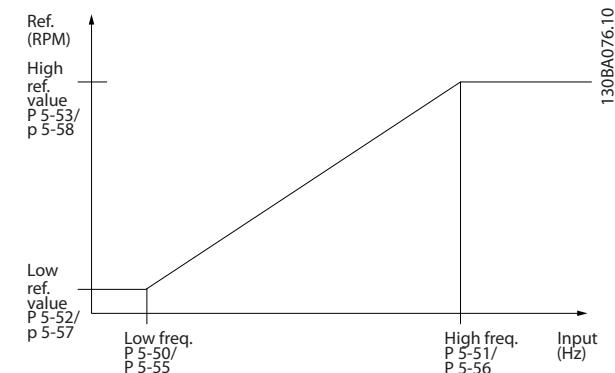

Illustration 3.38 Pulse Input

| 5-50 Term. 29 Low Frequency | | |
|-----------------------------|--|--|
| Range: | Function: | |
| 100 Hz* [0 - 110000 Hz] | Enter the low frequency limit corresponding to the low motor shaft speed (that is low reference value) in <i>parameter 5-52 Term. 29 Low Ref./Feedb. Value</i> . Refer to <i>Illustration 3.38</i> . | |

| 5-51 Term. 29 High Frequency | | |
|------------------------------|--|--|
| Range: | Function: | |
| 100 Hz* [0 - 110000 Hz] | Enter the high frequency limit corresponding to the high motor shaft speed (that is high reference value) in <i>parameter 5-53 Term. 29 High Ref./Feedb. Value</i> . | |

| 5-52 Term. 29 Low Ref./Feedb. Value | | |
|-------------------------------------|---|--|
| Range: | Function: | |
| 0 ReferenceFeed-backUnit* | [-999999.999 - 999999.999 ReferenceFeed-backUnit] | Enter the low reference value limit for the motor shaft speed [RPM]. This is also the lowest feedback value, see also <i>parameter 5-57 Term. 33 Low Ref./Feedb. Value</i> . Set terminal 29 to digital input (<i>parameter 5-02 Terminal 29 Mode = [0] input</i> (default) and <i>parameter 5-13 Terminal 29 Digital Input = applicable value</i>). |

| 5-53 Term. 29 High Ref./Feedb. Value | | |
|--------------------------------------|---|--|
| Range: | Function: | |
| Size related* | [-999999.999 - 999999.999 ReferenceFeed-backUnit] | Enter the high reference value [RPM] for the motor shaft speed and the high feedback value, see also <i>parameter 5-58 Term. 33 High Ref./Feedb. Value</i> . Select terminal 29 as a digital input (<i>parameter 5-02 Terminal 29 Mode = [0] input</i> (default) and <i>parameter 5-13 Terminal 29 Digital Input = applicable value</i>). This parameter is available for FC 302 only. |

| 5-54 Pulse Filter Time Constant #29 | | |
|-------------------------------------|--|--|
| Range: | Function: | |
| 100 ms* [1 - 1000 ms] | Enter the pulse filter time constant. The pulse filter dampens oscillations of the feedback signal, which is an advantage if there is a lot of noise in the system. A high time constant value results in better | |

| 5-54 Pulse Filter Time Constant #29 | | |
|-------------------------------------|--|---|
| Range: | | Function: |
| | | dampening but also increases the time delay through the filter. |

| 5-55 Term. 33 Low Frequency | | |
|-----------------------------|--|--|
| Range: | | Function: |
| 100 Hz* [0 - 110000 Hz] | | Enter the low frequency corresponding to the low motor shaft speed (that is low reference value) in <i>parameter 5-57 Term. 33 Low Ref./Feedb. Value</i> . |

| 5-56 Term. 33 High Frequency | | |
|------------------------------|--|--|
| Range: | | Function: |
| 100 Hz* [0 - 110000 Hz] | | Enter the high frequency corresponding to the high motor shaft speed (that is high reference value) in <i>parameter 5-58 Term. 33 High Ref./Feedb. Value</i> . |

| 5-57 Term. 33 Low Ref./Feedb. Value | | |
|-------------------------------------|--|---|
| Range: | | Function: |
| 0* [-999999.999 - 999999.999] | | Enter the low reference value [RPM] for the motor shaft speed. This is also the low feedback value, see also <i>parameter 5-52 Term. 29 Low Ref./Feedb. Value</i> . |

| 5-58 Term. 33 High Ref./Feedb. Value | | |
|---|--|--|
| Range: | | Function: |
| Size related* [-999999.999 - 999999.999 ReferenceFeed-backUnit] | | Enter the high reference value [RPM] for the motor shaft speed. See also <i>parameter 5-53 Term. 29 High Ref./Feedb. Value</i> . |

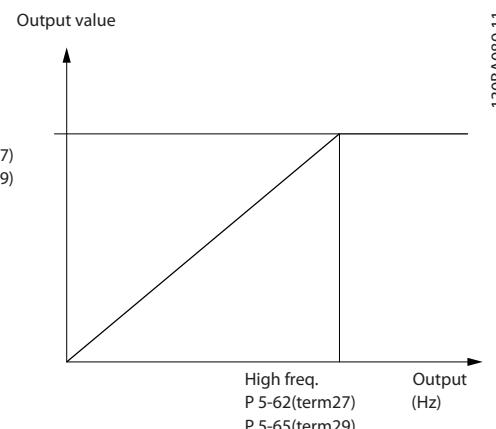

| 5-59 Pulse Filter Time Constant #33 | | |
|-------------------------------------|--|--|
| Range: | | Function: |
| 100 ms* [1 - 1000 ms] | | <p>NOTICE</p> <p>This parameter cannot be adjusted while the motor is running.</p> <p>Enter the pulse filter time constant. The low-pass filter reduces the influence, and dampens oscillations on the feedback signal from the control.</p> <p>This is an advantage if there is a great amount of noise in the system.</p> |

3.7.6 5-6* Pulse Outputs

NOTICE

These parameters cannot be adjusted while the motor is running.

These parameters configure pulse outputs with their functions and scaling. Terminals 27 and 29 are allocated to pulse output via *parameter 5-01 Terminal 27 Mode* and *parameter 5-02 Terminal 29 Mode*, respectively.

130BA089.11

| 5-68 Pulse Output Max Freq #X30/6 | | |
|-----------------------------------|----------------|--|
| Range: | | Function: |
| Size related* | [0 - 32000 Hz] | NOTICE This parameter cannot be adjusted while the motor is running. Select the maximum frequency on terminal X30/6 referring to the output variable in parameter 5-66 Terminal X30/6 Pulse Output Variable. This parameter is active when VLT® General Purpose I/O MCB 101 is installed in the frequency converter. |

3.7.7 5-7* 24 V Encoder Input

Connect the 24 V encoder to terminal 12 (24 V DC supply), terminal 32 (channel A), terminal 33 (channel B), and terminal 20 (GND). The digital inputs 32/33 are active for encoder inputs when [1] 24 V encoder is selected in parameter 1-02 Flux Motor Feedback Source and parameter 7-00 Speed PID Feedback Source. The encoder used is a dual-channel (A and B) 24 V type. Maximum input frequency: 110 kHz.

Encoder connection to the frequency converter

24 V incremental encoder. Maximum cable length 5 m.

**Illustration 3.40 Encoder Connection****Illustration 3.41 Encoder Rotation Direction****5-70 Term 32/33 Pulses Per Revolution**

| Range: | Function: |
|-------------------|--|
| 1024* [1 - 32768] | Set the encoder pulses per revolution on the motor shaft. Read the correct value from the encoder. |

5-71 Term 32/33 Encoder Direction

| Option: | Function: |
|---------|--|
| | NOTICE This parameter cannot be adjusted while the motor is running. |
| [0] * | Change the detected encoder rotation direction without changing the wiring to the encoder. |
| [1] | Sets channel A 90° (electrical degrees) behind channel B upon clockwise rotation of the encoder shaft. |
| [2] | Sets channel A 90° (electrical degrees) ahead of channel B upon clockwise rotation of the encoder shaft. |

5-72 Term 32/33 Encoder Type

Select the signal type of the encoder connected to terminals 32, 33.

| Option: | Function: |
|---------|---|
| [0] * | Quadrature A/B Format Encoder with 2 tracks: A and B, displaced 90° for detecting the rotational direction. |
| [1] | Single Channel 33 Encoder with one track connected to terminal 33. |
| [2] | Signle Channel w/Dir. Encoder with one track connected to terminal 33. The direction is set with a signal on terminal 32: 0 V = forward/clockwise, 24 V = reverse/counter clockwise. |

3.7.8 5-8* I/O Options**5-80 AHF Cap Reconnect Delay**

| Range: | Function: |
|-------------------|---|
| 25 s* [1 - 120 s] | Guarantees a minimum off-time for the capacitors. The timer starts once the AHF capacitor disconnects and needs to expire before the output is allowed to be on again. It only turns on again if the frequency converter power is 20-30%. |

3.7.9 5-9* Bus-Controlled

This parameter group selects digital and relay outputs via a fieldbus setting.

| 5-90 Digital & Relay Bus Control | | |
|----------------------------------|---|--|
| Range: | Function: | |
| 0* [0 - 2147483647] | <p>This parameter holds the state of the digital outputs and relays that is controlled by bus.</p> <p>A logical '1' indicates that the output is high or active.</p> <p>A logical '0' indicates that the output is low or inactive.</p> | |

5-95 Pulse Out #29 Bus Control

| Range: | Function: |
|------------------|--|
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal 29 when the terminal is configured as [45] Bus Controlled in parameter 5-63 Terminal 29 Pulse Output Variable. |

5-96 Pulse Out #29 Timeout Preset

| Range: | Function: |
|------------------|--|
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal 29 when the terminal is configured as [48] Bus Ctrl Timeout in parameter 5-63 Terminal 29 Pulse Output Variable and a timeout is detected. |

5-97 Pulse Out #X30/6 Bus Control

| Range: | Function: |
|------------------|---|
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal X30/6 when the terminal is configured as [45] Bus ctrl. in parameter 5-66 Terminal X30/6 Pulse Output Variable. |

5-98 Pulse Out #X30/6 Timeout Preset

| Range: | Function: |
|------------------|--|
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal X30/6 when the terminal is configured as [48] Bus Ctrl Timeout in parameter 5-66 Terminal X30/6 Pulse Output Variable and a timeout is detected. |

Table 3.22 Bus-controlled Digital Outputs and Relays

| 5-93 Pulse Out #27 Bus Control | | |
|--------------------------------|--|--|
| Range: | Function: | |
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal 27 when the terminal is configured as [45] Bus Controlled in parameter 5-60 Terminal 27 Pulse Output Variable. | |

| 5-94 Pulse Out #27 Timeout Preset | | |
|-----------------------------------|--|--|
| Range: | Function: | |
| 0 %* [0 - 100 %] | Set the output frequency transferred to output terminal 27 when the terminal is configured as [48] Bus Ctrl Timeout in parameter 5-60 Terminal 27 Pulse Output Variable and a timeout is detected. | |

3.8 Parameters: 6-** Analog In/Out

3.8.1 6-0* Analog I/O Mode

The analog inputs can be allocated to be either voltage (FC 301: 0–10 V, FC 302: 0 to \pm 10 V) or current input (FC 301/FC 302: 0/4–20 mA).

NOTICE

Thermistors may be connected to either an analog or a digital input.

6-00 Live Zero Timeout Time

Range: Function:

| | | |
|-------|------------|---|
| 10 s* | [1 - 99 s] | <p>Enter the live zero timeout in s. Live zero timeout time is active for analog inputs, that is, terminal 53 or terminal 54, used as reference or feedback sources.</p> <p>If the reference signal value associated with the selected current input drops below 50% of the value set in:</p> <ul style="list-style-type: none"> • <i>Parameter 6-10 Terminal 53 Low Voltage.</i> • <i>Parameter 6-12 Terminal 53 Low Current.</i> • <i>Parameter 6-20 Terminal 54 Low Voltage.</i> • <i>Parameter 6-22 Terminal 54 Low Current.</i> <p>For a time period longer than the time set in <i>parameter 6-00 Live Zero Timeout Time</i>, the function selected in <i>parameter 6-01 Live Zero Timeout Function</i> is activated.</p> |
|-------|------------|---|

6-01 Live Zero Timeout Function

Option: Function:

| | | |
|-------|---------------|---|
| | | <p>Select the timeout function. The function set in <i>parameter 6-01 Live Zero Timeout Function</i> is activated, if the input signal on terminal 53 or 54 is below 50% of the value in <i>parameter 6-10 Terminal 53 Low Voltage</i>, <i>parameter 6-12 Terminal 53 Low Current</i>, <i>parameter 6-20 Terminal 54 Low Voltage</i> or <i>parameter 6-22 Terminal 54 Low Current</i> for a time period defined in <i>parameter 6-00 Live Zero Timeout Time</i>.</p> <p>If several timeouts occur simultaneously, the frequency converter prioritizes the timeout functions as follows:</p> <ol style="list-style-type: none"> 1. <i>Parameter 6-01 Live Zero Timeout Function.</i> 2. <i>Parameter 8-04 Control Word Timeout Function.</i> |
| [0] * | Off | |
| [1] | Freeze output | Frozen at the present value. |
| [2] | Stop | Overruled to stop. |

6-01 Live Zero Timeout Function

Option: Function:

| | | |
|------|----------------|---|
| [3] | Jogging | Overruled to jog speed. |
| [4] | Max. speed | Overruled to max. speed. |
| [5] | Stop and trip | Overruled to stop with subsequent trip. |
| [20] | Coast | |
| [21] | Coast and trip | |

3.8.2 6-1* Analog Input 1

Parameters for configuring the scaling and limits for analog input 1 (terminal 53).

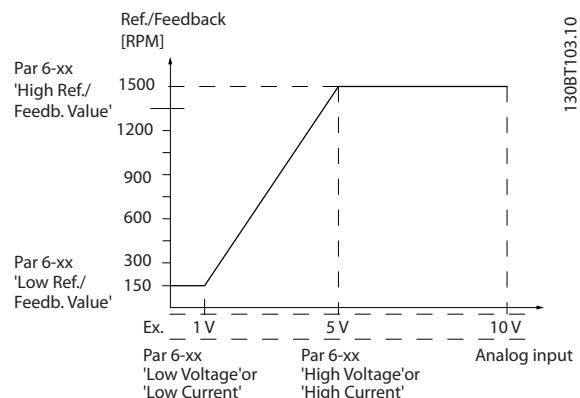

Illustration 3.42 Analog Input 1

6-10 Terminal 53 Low Voltage

Range: Function:

| | | |
|---------|-------------------------|--|
| 0.07 V* | [-10.00 - par. 6-11 V] | Enter the low voltage value. This analog input scaling value should correspond to the minimum reference value set in <i>parameter 6-14 Terminal 53 Low Ref./Feedb. Value</i> . |
|---------|-------------------------|--|

6-11 Terminal 53 High Voltage

Range: Function:

| | | |
|-------|---------------------|--|
| 10 V* | [par. 6-10 - 10 V] | Enter the high-voltage value. This analog input scaling value should correspond to the high reference feedback value set in <i>parameter 6-15 Terminal 53 High Ref./Feedb. Value</i> . |
|-------|---------------------|--|

6-12 Terminal 53 Low Current

Range: Function:

| | | |
|----------|---------------------|--|
| 0.14 mA* | [0 - par. 6-13 mA] | Enter the low current value. This reference signal should correspond to the minimum reference value, set in <i>parameter 3-02 Minimum/Offset Reference</i> . Set the value to exceed 2 mA in order to activate |
|----------|---------------------|--|

| | | |
|--|--|---|
| 6-12 Terminal 53 Low Current | | |
| Range: | | Function: |
| | | the live zero timeout function in parameter 6-01 Live Zero Timeout Function. |
| 6-13 Terminal 53 High Current | | |
| Range: | | Function: |
| 20 mA* | [par. 6-12 - 20 mA] | Enter the high current value corresponding to the high reference/feedback set in parameter 6-15 Terminal 53 High Ref./Feedb. Value. |
| 6-14 Terminal 53 Low Ref./Feedb. Value | | |
| Range: | | Function: |
| 0* | [-999999.999 - 999999.999] | Enter the analog input scaling value that corresponds to the low voltage/low current set in parameter 6-10 Terminal 53 Low Voltage and parameter 6-12 Terminal 53 Low Current. |
| 6-15 Terminal 53 High Ref./Feedb. Value | | |
| Range: | | Function: |
| Size related* | [-999999.999 - 999999.999] ReferenceFeedbackUnit] | Enter the analog input scaling value that corresponds to the maximum reference feedback value set in parameter 6-11 Terminal 53 High Voltage and parameter 6-13 Terminal 53 High Current. |
| 6-16 Terminal 53 Filter Time Constant | | |
| Range: | | Function: |
| 0.001 s* | [0.001 - 10 s] | <p>NOTICE</p> <p>This parameter cannot be adjusted while the motor is running.</p> <p>Enter the filter time constant. This constant is a first-order digital low-pass filter time for suppressing electrical noise in terminal 53. A high value improves dampening, but also increases the delay through the filter.</p> |

3.8.3 6-2* Analog Input 2

Parameters for configuring the scaling and limits for analog input 2 (terminal 54).

| | | |
|---|--|---|
| 6-20 Terminal 54 Low Voltage | | |
| Range: | | Function: |
| 0.07 V* [-10.00 - par. 6-21 V] | | Enter the low voltage value. This analog input scaling value should correspond to the minimum reference value, set in parameter 3-02 Minimum/Offset Reference. See also chapter 3.5 Parameters: 3-** Reference/Ramps. |
| 6-21 Terminal 54 High Voltage | | |
| Range: | | Function: |
| 10 V* [par. 6-20 - 10 V] | | Enter the high-voltage value. This analog input scaling value should correspond to the high reference feedback value set in parameter 6-25 Terminal 54 High Ref./Feedb. Value. |
| 6-22 Terminal 54 Low Current | | |
| Range: | | Function: |
| 0.14 mA* | [0 - par. 6-23 mA] | Enter the low current value. This reference signal should correspond to the minimum reference value, set in parameter 3-02 Minimum/Offset Reference. Enter the value that exceeds 2 mA to activate the live zero timeout function in parameter 6-01 Live Zero Timeout Function. |
| 6-23 Terminal 54 High Current | | |
| Range: | | Function: |
| 20 mA* | [par. 6-22 - 20 mA] | Enter the high current value corresponding to the high reference feedback value set in parameter 6-25 Terminal 54 High Ref./Feedb. Value. |
| 6-24 Terminal 54 Low Ref./Feedb. Value | | |
| Range: | | Function: |
| 0 ReferenceFeedbackUnit* | [-999999.999 - 999999.999] ReferenceFeedbackUnit] | Enter the analog input scaling value that corresponds to the minimum reference feedback value set in parameter 3-02 Minimum/Offset Reference. |

| 6-25 Terminal 54 High Ref./Feedb. Value | | |
|---|--|--|
| Range: | | Function: |
| Size related* | [-999999.999 - 999999.999] ReferenceFeedbackUnit] | Enter the analog input scaling value that corresponds to the maximum reference feedback value set in parameter 3-03 Maximum Reference. |

| 6-26 Terminal 54 Filter Time Constant | | |
|---------------------------------------|-------------------|---|
| Range: | | Function: |
| 0.001 s* s] | [0.001 - 10 s] | <p>NOTICE This parameter cannot be adjusted while the motor is running.</p> <p>Enter the filter time constant. This is a first-order digital low-pass filter time constant for suppressing electrical noise in terminal 54. Increasing the value improves dampening but also increases the time delay through the filter.</p> |

3.8.4 6-3* Analog Input 3 General Purpose I/O MCB 101

Parameter group for configuring the scale and limits for analog input 3 (X30/11) in VLT® General Purpose I/O MCB 101.

| 6-30 Terminal X30/11 Low Voltage | | |
|----------------------------------|-----------------------|---|
| Range: | | Function: |
| 0.07 V* 6-31 V] | [0 - par. 6-31 V] | Sets the analog input scaling value to correspond to the low reference feedback value (set in parameter 6-34 Term. X30/11 Low Ref./Feedb. Value). |

| 6-31 Terminal X30/11 High Voltage | | |
|-----------------------------------|---------------------|---|
| Range: | | Function: |
| 10 V* 10 V] | [par. 6-30 - 10 V] | Sets the analog input scaling value to correspond to the high reference feedback value (set in parameter 6-35 Term. X30/11 High Ref./Feedb. Value). |

| 6-34 Term. X30/11 Low Ref./Feedb. Value | | |
|---|--|---|
| Range: | | Function: |
| 0* 999999.999 - 999999.999] | | Sets the analog input scaling value to correspond to the low voltage value (set in parameter 6-30 Terminal X30/11 Low Voltage). |

| 6-35 Term. X30/11 High Ref./Feedb. Value | | |
|--|--|---|
| Range: | | Function: |
| 100* 999999.999 - 999999.999] | | Sets the analog input scaling value to correspond to the high-voltage value |

| 6-35 Term. X30/11 High Ref./Feedb. Value | | |
|--|--|---|
| Range: | | Function: |
| | | (set in parameter 6-31 Terminal X30/11 High Voltage). |

| 6-36 Term. X30/11 Filter Time Constant | | |
|--|-------------------|---|
| Range: | | Function: |
| 0.001 s* s] | [0.001 - 10 s] | <p>NOTICE This parameter cannot be adjusted while the motor is running.</p> <p>Enter the filter time constant. This constant is a first-order digital low-pass filter time for suppressing electrical noise in terminal X30/11. A high value improves dampening, but also increases the delay through the filter.</p> |

3.8.5 6-4* Analog Input X30/12

Parameter group for configuring the scale and limits for analog input 4 (X30/12) placed on VLT® General Purpose I/O MCB 101.

| 6-40 Terminal X30/12 Low Voltage | | |
|----------------------------------|-----------------------|---|
| Range: | | Function: |
| 0.07 V* 6-41 V] | [0 - par. 6-41 V] | Sets the analog input scaling value to correspond to the low reference feedback value set in parameter 6-44 Term. X30/12 Low Ref./Feedb. Value. |

| 6-41 Terminal X30/12 High Voltage | | |
|-----------------------------------|---------------------|---|
| Range: | | Function: |
| 10 V* 10 V] | [par. 6-40 - 10 V] | Sets the analog input scaling value to correspond to the high reference feedback value set in parameter 6-45 Term. X30/12 High Ref./Feedb. Value. |

| 6-44 Term. X30/12 Low Ref./Feedb. Value | | |
|---|--|--|
| Range: | | Function: |
| 0* -999999.999 - 999999.999] | | Sets the analog output scaling value to correspond to the low voltage value set in parameter 6-40 Terminal X30/12 Low Voltage. |

| 6-45 Term. X30/12 High Ref./Feedb. Value | | |
|--|--|---|
| Range: | | Function: |
| 100* -999999.999 - 999999.999] | | Sets the analog input scaling value to correspond to the high-voltage value set in parameter 6-41 Terminal X30/12 High Voltage. |

| 6-46 Term. X30/12 Filter Time Constant | | |
|--|---|--|
| Range: | Function: | |
| 0.001 s* s] | [0.001 - 10 s] NOTICE This parameter cannot be adjusted while the motor is running. Enter the filter time constant. This constant is a first-order digital low-pass filter time for suppressing electrical noise in terminal X30/12. A high value improves dampening, but also increases the delay through the filter. | |

3.8.6 6-5* Analog Output 1

Parameters for configuring the scaling and limits for analog output 1, that is, terminal 42. Analog outputs are current outputs: 0/4–20 mA. Common terminal (terminal 39) is the same terminal and has the same electrical potential for analog common and digital common connection.

Resolution on analog output is 12 bit.

| 6-50 Terminal 42 Output | | |
|-------------------------|---|--|
| Option: | Function: | |
| | Select the function of terminal 42 as an analog current output. Depending on the selection the output is either a 0–20 mA or 4–20 mA output. The current value can be read out in the LCP in parameter 16-65 Analog Output 42 [mA]. | |
| [0] | No operation | Indicates no signal on the analog output. |
| [58] | Actual Position | The actual position. 0–20 mA corresponds to parameter 3-06 Minimum Position to parameter 3-07 Maximum Position. |
| [59] | Actual Position 4-20mA | The actual position. 4–20 mA corresponds to parameter 3-06 Minimum Position to parameter 3-07 Maximum Position. |
| [100] | Output frequency | 0 Hz = 0 mA; 100 Hz = 20 mA. |
| [101] | Reference | Parameter 3-00 Reference Range [Min - Max] 0% = 0 mA; 100% = 20 mA Parameter 3-00 Reference Range [-Max - Max] -100% = 0 mA; 0% = 10 mA; +100% = 20 mA |
| [102] | Feedback | |
| [103] | Motor Current | The value is taken from parameter 16-37 Inv. Max. Current. The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) is 24 A. 160 % = 38.4 A. Motor normal current is 22 A, the readout is 11.46 mA. $\frac{20 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} = 11.46 \text{ mA}$ |

| 6-50 Terminal 42 Output | | |
|-------------------------|--|--|
| Option: | Function: | |
| | In case the normal motor current is equal to 20 mA, the output setting of parameter 6-52 Terminal 42 Output Max Scale is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ | |
| [104] | Torque rel to limit | The torque setting is related to setting in parameter 4-16 Torque Limit Motor Mode |
| [105] | Torq relate to rated | The torque is related to the motor torque setting. |
| [106] | Power | Taken from parameter 1-20 Motor Power [kW]. |
| [107] | Speed | Taken from parameter 3-03 Maximum Reference. 20 mA equals to value in parameter 3-03 Maximum Reference. |
| [108] | Torque | Torque reference related to 160% torque. |
| [109] | Max Out Freq | 0 Hz = 0 mA, parameter 4-19 Max Output Frequency = 20 mA. |
| [113] | PID Clamped Output | |
| [119] | Torque % lim | |
| [130] | Output freq. 4-20mA | 0 Hz = 4 mA, 100 Hz = 20 mA |
| [131] | Reference 4-20mA | Parameter 3-00 Reference Range [Min-Max] 0% = 4 mA; 100% = 20 mA Parameter 3-00 Reference Range [-Max-Max] -100% = 4 mA; 0% = 12 mA; +100% = 20 mA |
| [132] | Feedback 4-20mA | |
| [133] | Motor cur. 4-20mA | The value is taken from parameter 16-37 Inv. Max. Current. The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) is 24 A. 160 % = 38.4 A. Motor normal current is 22 A, the readout is 11.46 mA. $\frac{16 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} + 4 \text{ mA} = 13.17 \text{ mA}$ In case the normal motor current is equal to 20 mA, the output setting of parameter 6-62 Terminal X30/8 Max. Scale is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ |
| [134] | Torq.% lim 4-20 mA | The torque setting is related to setting in parameter 4-16 Torque Limit Motor Mode. |
| [135] | Torq.% nom 4-20mA | The torque setting is related to the motor torque setting. |
| [136] | Power 4-20mA | Taken from parameter 1-20 Motor Power [kW]. |

6-50 Terminal 42 Output

| Option: | Function: |
|----------------------------|---|
| [137] Speed 4-20mA | Taken from parameter 3-03 Maximum Reference. 20 mA = Value in parameter 3-03 Maximum Reference. |
| [138] Torque 4-20mA | Torque reference related to 160% torque. |
| [139] Bus ctrl. 0-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [140] Bus ctrl. 4-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [141] Bus ctrl 0-20mA t.o. | Parameter 4-54 Warning Reference Low defines the behavior of the analog output in case of fieldbus timeout. |
| [142] Bus ctrl 4-20mA t.o. | Parameter 4-54 Warning Reference Low defines the behavior of the analog output in case of fieldbus timeout. |
| [147] Main act val 0-20mA | |
| [148] Main act val 4-20mA | |
| [149] Torque % lim 4-20mA | Analog output at 0 torque is 12 mA. Motoring torque increases the output current to maximum torque limit 20 mA (set in parameter 4-16 Torque Limit Motor Mode). Generating torque decreases the output to torque limit in generator mode (set in parameter 4-17 Torque Limit Generator Mode) Example: Parameter 4-16 Torque Limit Motor Mode = 200% and parameter 4-17 Torque Limit Generator Mode = 200%. 20 mA = 200% motoring and 4 mA = 200% generating. 0mA 4mA 12 mA 20 mA Par 4-17 (200%) 0% Torque Par 4-16 (200%) 130BB372.10 |
| [150] Max Out Fr 4-20mA | 0 Hz = 0 mA, parameter 4-19 Max Output Frequency = 20 mA. |

6-51 Terminal 42 Output Min Scale

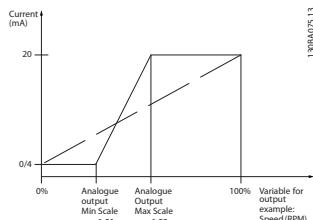

| Range: | Function: |
|------------------|--|
| 0 %* [0 - 200 %] | Scale for the minimum output (0 mA or 4 mA) of the analog signal at terminal 42. Set the value to be the percentage of the full range of the variable selected in parameter 6-50 Terminal 42 Output. |

6-52 Terminal 42 Output Max Scale

| Range: | Function: |
|--------------------|---|
| 100 %* [0 - 200 %] | Scale the maximum output of the selected analog signal at terminal 42. Set the value to the maximum value of the current signal output. Scale the output to give a current lower than 20 mA at full scale; or 20 mA at an output below 100% of the maximum signal value. If 20 mA is the required output current at a value 0-100% of the full-scale output, program the percentage value in the parameter, that is, 50% = 20 mA. If a current 4-20 mA is required at maximum output (100%), calculate the percentage value as follows: $20 \text{ mA} / \text{desired maximum current} \times 100 \%$ $\text{i.e. } 10 \text{ mA} : \frac{20}{10} \times 100 = 200 \%$ |

20 mA / desired maximum current × 100 %

$$\text{i.e. } 10 \text{ mA} : \frac{20}{10} \times 100 = 200 \%$$

130BA075.13

Illustration 3.44 Output Max. Scale

6-53 Terminal 42 Output Bus Control

| Range: | Function: |
|------------------|--|
| 0 %* [0 - 100 %] | Holds the level of output 42 if controlled by bus. |

6-54 Terminal 42 Output Timeout Preset

| Range: | Function: |
|------------------|---|
| 0 %* [0 - 100 %] | Holds the preset level of output 42. If a timeout function is selected in parameter 6-50 Terminal 42 Output, the output is preset to this level if a fieldbus timeout occurs. |

6-55 Analog Output Filter

| Option: | Function: |
|---------|---|
| | The following readout parameters from selection in parameter 6-50 Terminal 42 Output have a filter selected when parameter 6-55 Analog Output Filter is on: |
| | Selection |
| | 0-20 mA |
| | 4-20 mA |
| | Motor current (0-I _{max}) [103] [133] |
| | Torque limit (0-T _{lim}) [104] [134] |
| | Rated torque (0-T _{nom}) [105] [135] |
| | Power (0-P _{nom}) [106] [136] |
| | Speed (0-Speed _{max}) [107] [137] |

Table 3.23 Readout Parameters

3.8.7 6-6* Analog Output 2 MCB 101

Analog outputs are current outputs: 0/4–20 mA. Common terminal (terminal X30/8) is the same terminal and electrical potential for analog common connection. Resolution on analog output is 12 bit.

| 6-55 Analog Output Filter | | |
|---------------------------|-----|-------------|
| Option: Function: | | |
| [0] * | Off | Filter off. |
| [1] | On | Filter on. |

| 6-60 Terminal X30/8 Output | | |
|-----------------------------------|----------------------|--|
| Option: Function: | | |
| | | Select the function of terminal X30/8 as an analog current output. Depending on the selection, the output is either a 0–20 mA or 4–20 mA output. The current value can be readout in the LCP in <i>parameter 16-65 Analog Output 42 [mA]</i> . |
| [0] | No operation | When no signal on the analog output is present. |
| [100] | Output frequency | 0 Hz = 0 mA; 100 Hz = 20 mA. |
| [101] | Reference | <i>Parameter 3-00 Reference Range [Min. - Max.]</i> 0% = 0 mA; 100% = 20 mA <i>Parameter 3-00 Reference Range [-Max. - Max.]</i> -100% = 0 mA; 0% = 10 mA; +100% = 20 mA |
| [102] | Feedback | |
| [103] | Motor Current | The value is taken from <i>parameter 16-37 Inv. Max. Current</i> . The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) = 24 A. 160% = 38.4 A. Motor normal current = 22 A, readout is 11.46 mA. $\frac{20 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} = 11.46 \text{ mA}$ In case the normal motor current is equal to 20 mA, the output setting of <i>parameter 6-62 Terminal X30/8 Max. Scale</i> is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ |
| [104] | Torque rel to limit | The torque setting is related to setting in <i>parameter 4-16 Torque Limit Motor Mode</i> . |
| [105] | Torq relate to rated | The torque is related to the motor torque setting. |
| [106] | Power | Taken from <i>parameter 1-20 Motor Power [kW]</i> . |
| [107] | Speed | Taken from <i>parameter 3-03 Maximum Reference</i> . 20 mA = value in <i>parameter 3-03 Maximum Reference</i> . |
| [108] | Torque | Torque reference related to 160% torque. |
| 6-60 Terminal X30/8 Output | | |
| Option: Function: | | |
| [109] | Max Out Freq | In relation to <i>parameter 4-19 Max Output Frequency</i> . |
| [113] | PID Clamped Output | |
| [119] | Torque % lim | |
| [130] | Output freq. 4-20mA | 0 Hz = 4 mA, 100 Hz = 20 mA |
| [131] | Reference 4-20mA | <i>Parameter 3-00 Reference Range [Min.-Max.]</i> 0% = 4 mA; 100% = 20 mA <i>Parameter 3-00 Reference Range [-Max-Max.]</i> -100% = 4 mA; 0% = 12 mA; +100% = 20 mA |
| [132] | Feedback 4-20mA | |
| [133] | Motor cur. 4-20mA | The value is taken from <i>parameter 16-37 Inv. Max. Current</i> . The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) = 24 A. 160% = 38.4 A. Motor normal current = 22 A Readout 11.46 mA. $\frac{16 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} = 9.17 \text{ mA}$ In case the normal motor current is equal to 20 mA, the output setting of <i>parameter 6-62 Terminal X30/8 Max. Scale</i> is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ |
| [134] | Torq.% lim 4-20 mA | The torque setting is related to setting in <i>parameter 4-16 Torque Limit Motor Mode</i> . |
| [135] | Torq.% nom 4-20mA | The torque setting is related to the motor torque setting. |
| [136] | Power 4-20mA | Taken from <i>parameter 1-20 Motor Power [kW]</i> . |
| [137] | Speed 4-20mA | Taken from <i>parameter 3-03 Maximum Reference</i> . 20 mA = Value in <i>parameter 3-03 Maximum Reference</i> . |
| [138] | Torque 4-20mA | Torque reference related to 160% torque. |
| [139] | Bus ctrl. 0-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [140] | Bus ctrl. 4-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [141] | Bus ctrl 0-20mA t.o. | <i>Parameter 4-54 Warning Reference Low</i> defines the behavior of the analog output in case of bus timeout. |

| 6-60 Terminal X30/8 Output | | |
|----------------------------|-------------------------|---|
| Option: | | Function: |
| [142] | Bus ctrl 4-20mA t.o. | Parameter 4-54 Warning Reference Low defines the behavior of the analog output in case of bus timeout. |
| [149] | Torque % lim 4-20mA | Torque reference. Parameter 3-00 Reference Range [Min.-Max.] 0% = 4 mA; 100% = 20 mA Parameter 3-00 Reference Range [-Max. - Max.] -100% = 4 mA; 0% = 12 mA; +100% = 20 mA |
| [150] | Max Out Fr 4-20mA | In relation to parameter 4-19 Max Output Frequency. |

| 6-64 Terminal X30/8 Output Timeout Preset | | |
|---|-----------|--|
| Range: | Function: | |
| | | If there is a fieldbus timeout and a timeout function is selected in parameter 6-60 Terminal X30/8 Output, the output is preset to this level. |

| 6-61 Terminal X30/8 Min. Scale | | |
|--------------------------------|-------------|---|
| Range: | | Function: |
| 0 %* | [0 - 200 %] | Scales the minimum output of the selected analog signal on terminal X30/8. Scale the minimum value as a percentage of the maximum signal value, that is 0 mA (or 0 Hz) is required at 25% of the maximum output value and 25% is programmed. The value can never exceed the corresponding setting in parameter 6-62 Terminal X30/8 Max. Scale if the value is below 100%. This parameter is active when VLT® General Purpose I/O MCB 101 is mounted in the frequency converter. |

| 6-62 Terminal X30/8 Max. Scale | | |
|--------------------------------|-------------|---|
| Range: | | Function: |
| 100 %* | [0 - 200 %] | Scales the maximum output of the selected analog signal on terminal X30/8. Scale the value to the required maximum value of the current signal output. Scale the output to give a lower current than 20 mA at full scale or 20 mA at an output below 100% of the maximum signal value. If 20 mA is the required output current at a value between 0-100% of the full-scale output, program the percentage value in the parameter, that is, 50% = 20 mA. If a current 4-20 mA is required at maximum output (100%), calculate the percentage value as follows: $20 \text{ mA} / \text{desired maximum current} \times 100\% \\ i.e. 10 \text{ mA} : \frac{20 - 4}{10} \times 100 = 160\%$ |

| 6-63 Terminal X30/8 Bus Control | | |
|---------------------------------|-------------|---|
| Range: | | Function: |
| 0 %* | [0 - 100 %] | Holds the level of output X30/8 if controlled by bus. |

| 6-64 Terminal X30/8 Output Timeout Preset | | |
|---|-------------|---|
| Range: | | Function: |
| 0 %* | [0 - 100 %] | Holds the preset level of output X30/8. |

3.8.8 6-7* Analog Output 3 MCB 113

Parameters for configuring the scaling and limits for analog output 3, terminals X45/1, and X45/2. Analog outputs are current outputs: 0/4–20 mA. Resolution on analog output is 11 bit.

6-70 Terminal X45/1 Output

| 6-70 Terminal X45/1 Output | | |
|----------------------------|--|--|
| Option: | | Function: |
| | | Select the function of terminal X45/1 as an analog current output. |
| [0] | No operation | When no signal on the analog output is present. |
| [52] | MCO 305 0-20 mA | |
| [53] | MCO 305 4-20 mA | |
| [100] | Output frequency 0-20 mA | 0 Hz = 0 mA; 100 Hz = 20 mA. |
| [101] | Reference 0-20 mA | Parameter 3-00 Reference Range [Min. - Max.] 0% = 0 mA; 100% = 20 mA Parameter 3-00 Reference Range [-Max. - Max.] -100% = 0 mA; 0% = 10 mA; +100% = 20 mA |
| [102] | Feedback | |
| [103] | Motor current 0-20 mA | The value is taken from parameter 16-37 Inv. Max. Current. The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) = 24 A. 160% = 38.4 A. Motor normal current = 22 A, readout 11.46 mA. $\frac{20 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} = 11.46 \text{ mA}$ In case the normal motor current is equal to 20 mA, the output setting of parameter 6-52 Terminal 42 Output Max Scale is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ |
| [104] | Torque rel to lim 0-20 mA | The torque setting is related to setting in parameter 4-16 Torque Limit Motor Mode. |
| [105] | Torque rel to rated motor torque 0-20 mA | The torque is related to the motor torque setting. |
| [106] | Power 0-20 mA | Taken from parameter 1-20 Motor Power [kW]. |

6-70 Terminal X45/1 Output

| Option: | Function: |
|----------------------------------|--|
| [107] Speed 0-20 mA | Taken from parameter 3-03 Maximum Reference. 20 mA = value in parameter 3-03 Maximum Reference. |
| [108] Torque ref. 0-20 mA | Torque reference related to 160% torque. |
| [109] Max. out freq 0-20 mA | In relation to parameter 4-19 Max Output Frequency. |
| [130] Output freq. 4-20 mA | 0 Hz = 4 mA, 100 Hz = 20 mA |
| [131] Reference 4-20 mA | Parameter 3-00 Reference Range [Min.-Max.] 0% = 4 mA; 100% = 20 mA Parameter 3-00 Reference Range [-Max-Max.] -100% = 4 mA; 0% = 12 mA; +100% = 20 mA |
| [132] Feedback 4-20 mA | |
| [133] Motor cur. 4-20 mA | The value is taken from parameter 16-37 Inv. Max. Current. The inverter maximum current (160% current) is equal to 20 mA. Example: Inverter normal current (11 kW) = 24 A. 160% = 38.4 A. Motor normal current = 22 A, readout 11.46 mA. $\frac{16 \text{ mA} \times 22 \text{ A}}{38.4 \text{ A}} = 9.17 \text{ mA}$ In case the normal motor current is equal to 20 mA, the output setting of parameter 6-52 Terminal 42 Output Max Scale is: $\frac{I_{VLT_{Max}} \times 100}{I_{Motor_{Norm}}} = \frac{38.4 \times 100}{22} = 175 \%$ |
| [134] Torque % lim. 4-20 mA | The torque setting is related to setting in parameter 4-16 Torque Limit Motor Mode. |
| [135] Torque % nom 4-20 mA | The torque setting is related to the motor torque setting. |
| [136] Power 4-20 mA | Taken from parameter 1-20 Motor Power [kW]. |
| [137] Speed 4-20 mA | Taken from parameter 3-03 Maximum Reference. 20 mA = Value in parameter 3-03 Maximum Reference. |
| [138] Torque 4-20 mA | Torque reference related to 160% torque. |
| [139] Bus ctrl. 0-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [140] Bus ctrl. 4-20 mA | An output value set from fieldbus process data. The output works independently of internal functions in the frequency converter. |
| [141] Bus ctrl. 0-20 mA, timeout | Parameter 4-54 Warning Reference Low defines the behavior of the analog output in case of a fieldbus timeout. |

6-70 Terminal X45/1 Output

| Option: | Function: |
|----------------------------------|---|
| [142] Bus ctrl. 4-20 mA, timeout | Parameter 4-54 Warning Reference Low defines the behavior of the analog output in case of a fieldbus timeout. |
| [150] Max. out freq 4-20 mA | In relation to parameter 4-19 Max Output Frequency. |

6-71 Terminal X45/1 Output Min. Scale

| Range: | Function: |
|-------------------------|--|
| 0.00%* [0.00 - 200.00%] | Scale the minimum output of the selected analog signal at terminal X45/1 as a percentage of the maximum signal value. For example, if 0 mA (or 0 Hz) is required at 25% of the maximum output value, then program 25%. Scaling values up to 100% can never exceed the corresponding setting in parameter 6-72 Terminal X45/1 Max. Scale. |

6-72 Terminal X45/1 Output Max. Scale

| Range: | Function: |
|------------------------|--|
| 100%* [0.00 - 200.00%] | Scale the maximum output of the selected analog signal at terminal X45/1. Set the value to the maximum value of the current signal output. Scale the output to give a current lower than 20 mA at full scale, or 20 mA at an output below 100% of the maximum signal value. If 20 mA is the required output current at a value between 0–100% of the full-scale output, program the percentage value in the parameter, for example 50% = 20 mA. If a current 4–20 mA is required at maximum output (100%), calculate the percentage value as follows (example where required maximum output is 10 mA): |
| | $\frac{I_{RANGE} [\text{mA}]}{I_{DESIRED MAX} [\text{mA}]} \times 100 \%$ $= \frac{20 - 4 \text{ mA}}{10 \text{ mA}} \times 100 \% = 160 \%$ |

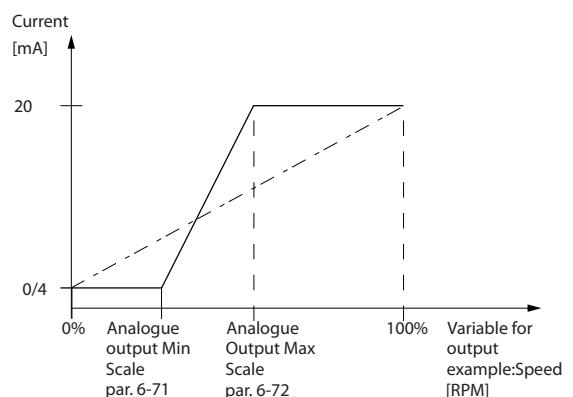

Illustration 3.45 Output Maximum Scale

130BA877.10

6-73 Terminal X45/1 Output Bus Control

| Range: | Function: |
|-------------------------|---|
| 0.00%* [0.00 - 100.00%] | Holds the level of analog output 3 (terminal X45/1) if controlled by bus. |

6-74 Terminal X45/1 Output Timeout Preset

| Range: | Function: |
|-------------------------|--|
| 0.00%* [0.00 - 100.00%] | Holds the preset level of analog output 3 (terminal X45/1). If there is a fieldbus timeout and a timeout function is selected in parameter 6-70 Terminal X45/1 Output, the output is preset to this level. |

3.8.9 6-8* Analog Output 4 MCB 113

Parameters for configuring the scaling and limits for analog output 4, terminals X45/3 and X45/4. Analog outputs are current outputs: 0/4 to 20 mA. Resolution on analog output is 11 bit.

6-80 Terminal X45/3 Output

| Option: | Function: |
|--------------------|--|
| | Select the function of terminal X45/3 as an analog current output. |
| [0] * No operation | Same selections available as for parameter 6-70 Terminal X45/1 Output. |

6-81 Terminal X45/3 Output Min. Scale

| Option: | Function: |
|--------------------------|--|
| [0.00%] * 0.00 - 200.00% | Scales the minimum output of the selected analog signal on terminal X45/3. Scale the minimum value as a percentage of the maximum signal value, for example, 0 mA (or 0 Hz) is required at 25% of the maximum output value and 25% is programmed. The value can never exceed the corresponding setting in parameter 6-82 Terminal X45/3 Max. Scale if value is below 100%. This parameter is active when VLT® Extended Relay Card MCB 113 is mounted in the frequency converter. |

6-82 Terminal X45/3 Output Max. Scale

| Option: | Function: |
|--------------------------|--|
| [0.00%] * 0.00 - 200.00% | Scales the maximum output of the selected analog signal on terminal X45/3. Scale the value to the required maximum value of the current signal output. Scale the output to give a lower current than 20 mA at full scale or 20 mA at an output below 100% of the maximum signal value. If 20 mA is the required output current at a value between 0–100% of the full-scale output, program the percentage value in the parameter, for example, 50%=20 mA. If a current of 4–20 |

6-82 Terminal X45/3 Output Max. Scale

| Option: | Function: |
|---------|--|
| | <p>mA is required at maximum output (100%), calculate the percentage value as follows (example where required maximum output is 10 mA):</p> $\frac{I_{\text{RANGE}} [\text{mA}]}{I_{\text{DESIRED MAX}} [\text{mA}]} \times 100 \% = \frac{20 - 4 \text{ mA}}{10 \text{ mA}} \times 100 \% = 160 \%$ |

6-83 Terminal X45/3 Output Bus Control

| Option: | Function: |
|-----------|--|
| [0.00%] * | 0.00 - 100.00% Holds the level of output 4 (X45/3) if controlled by bus. |

6-84 Terminal X45/3 Output Timeout Preset

| Option: | Function: |
|-----------|--|
| [0.00%] * | 0.00 - 100.00% Holds the present level of output 4 (X45/3). If there is a fieldbus timeout and a timeout function is selected in parameter 6-80 Terminal X45/3 Output, the output is preset to this level. |

3.9 Parameters: 7-** Controllers

3.9.1 7-0* Speed PID Ctrl.

NOTICE

If separate encoders are used (FC 302 only), adjust the ramp-related parameters according to the gear ratio between the 2 encoders.

| 7-00 Speed PID Feedback Source | | |
|--------------------------------|---|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. Select the encoder for closed loop feedback. The feedback may come from a different encoder (typically mounted on the application itself) than the motor-mounted encoder feedback selected in parameter 1-02 Flux Motor Feedback Source. | |
| [0] | Motor feedb. P1-02 | |
| [1] | 24V encoder | |
| [2] | MCB 102 | |
| [3] | MCB 103 | |
| [4] | MCO Encoder 1 X56 | |
| [5] | MCO Encoder 2 X55 | |
| [6] | Analog Input 53 | |
| [7] | Analog Input 54 | |
| [8] | Frequency input 29 | |
| [9] | Frequency input 33 | |
| [11] | MCB 15X | |

3.9.2 Speed PID Droop

This feature implements precise torque sharing between multiple motors on a common mechanical shaft.

Speed PID droop is useful for marine and mining applications, where redundancy and higher dynamics are required. Speed PID droop allows to reduce inertia by utilising multiple small motors instead of 1 big motor.

Illustration 3.46 shows the concept of the feature:

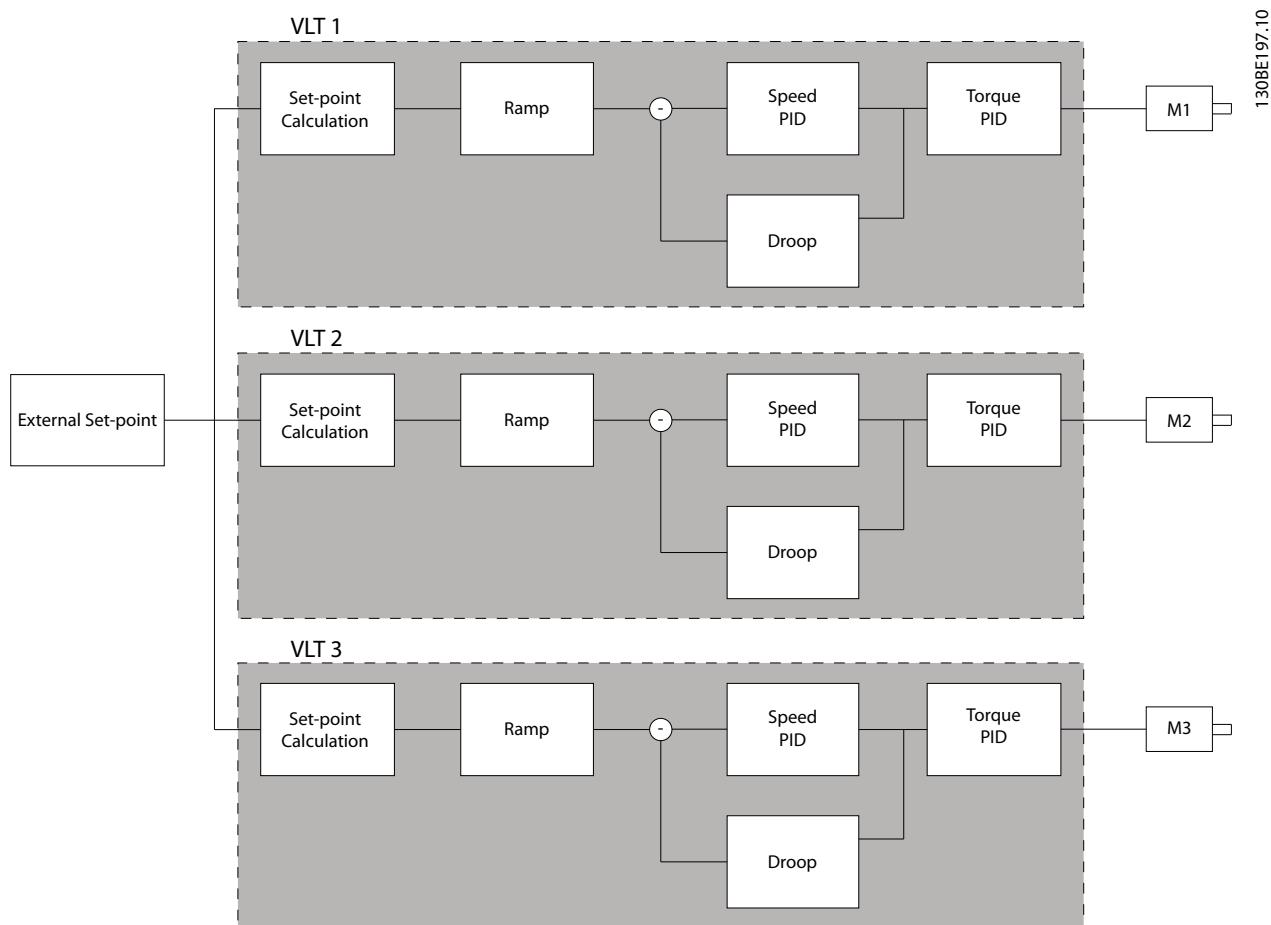

Illustration 3.46 Speed PID Droop

The value in *parameter 7-01 Speed PID Droop* ensures that the load is shared equally between the motors. If the torque on the motor is 100% of nominal motor torque, the frequency converter reduces its output to this motor by 100% of the value in *parameter 7-01 Speed PID Droop*. If the torque is 50% of nominal motor torque, the frequency converter reduces its output to this motor by 50% of the value in *parameter 7-01 Speed PID Droop*. This ensures that the motors share the load evenly.

A side effect of using speed PID droop is that the actual shaft speed does not match the reference exactly. Speed PID droop is not efficient in low speed applications because the adjustment range may be insufficient.

Use speed trim if the application requires the following features:

- Accurate speed (the actual shaft speed matches the reference speed).
- Precise speed adjustment down to 0 RPM.

Enabling PID droop

To enable speed PID droop:

- Run the frequency converter in 1 of the following modes:
 - Flux closed loop (*parameter 1-01 Motor Control Principle, [3] Flux w/ motor feedb.*).
 - Flux sensorless (*parameter 1-01 Motor Control Principle, [2] Flux sensorless*).
- Run the frequency converter in speed mode (*parameter 1-00 Configuration Mode*, option [0] *Speed open loop* or [1] *Speed closed loop*).
- Ensure that *parameter 1-62 Slip Compensation* contains the default value (0%).
- Ensure that all frequency converters in the torque sharing system use the same speed reference and start and stop signal.
- Ensure that all frequency converters in the torque sharing system use the same parameter settings.
- Adjust the value in *parameter 7-01 Speed PID Droop*.

NOTICE

Do not use overvoltage control when using the PID droop function (select [0] *Disabled* in *parameter 2-17 Over-voltage Control*).

NOTICE

If the speed reference is lower than the value in *parameter 7-01 Speed PID Droop*, the frequency converter makes the PID droop factor equal to the speed reference.

Example for a PM motor

In a set-up with the following configuration:

- Reference speed = 1500 RPM.
- *Parameter 7-01 Speed PID Droop* = 50 RPM.

The frequency converter provides the following output:

| Load on the motor | Output |
|------------------------|----------|
| 0% | 1500 RPM |
| 100% | 1450 RPM |
| 100% regenerative load | 1550 RPM |

Table 3.24 Output with Speed PID Droop

This is why droop is sometimes referred to as negative slip compensation (the frequency converter reduces the output instead of increasing it).

Speed trim

The speed trim function is an add-on to the speed PID droop. The speed trim provides torque sharing with precise speed down to 0 RPM. The function requires wiring of analog signals.

In speed trim, the master frequency converter runs normal speed PID without droop. The follower frequency

converters use the speed PID droop, but instead of reacting on their own load they compare their own load to the load of other frequency converters in the system and then use that data as input for the speed PID droop.

A set-up with a single source, where the master frequency converter sends information about torque to all followers, is limited by the number of available analog outputs on the master frequency converter. It is possible to use a cascade principle, which overcomes this limitation but makes the control less fast and less accurate.

The master frequency converter operates in speed mode. The follower frequency converters operate in speed mode with the speed trim. The trim function uses torque data from all frequency converters in the system.

7-01 Speed PID Droop

The droop function allows the frequency converter to decrease the motor speed proportional to the load. The droop value is directly proportional to the load value. Use the droop function when several motors are mechanically connected and the load on motors can differ.

Ensure that *parameter 1-62 Slip Compensation* has a default setting.

Range: Function:

| | | |
|--------|---------------|-------------------------------------|
| 0 RPM* | [0 - 200 RPM] | Enter the droop value at 100% load. |
|--------|---------------|-------------------------------------|

7-02 Speed PID Proportional Gain

Range: Function:

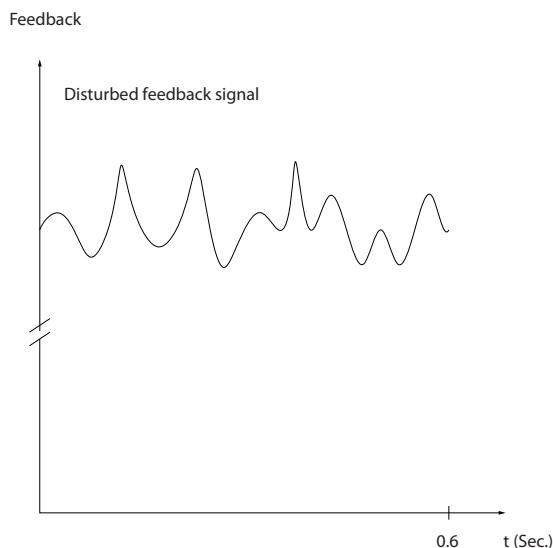

| | | |
|---------------|---------|---|
| Size related* | [0 - 1] | Enter the speed controller proportional gain. The proportional gain amplifies the error (that is, the deviation between the feedback signal and the setpoint). This parameter is used with <i>parameter 1-00 Configuration Mode</i> [0] <i>Speed open loop</i> and [1] <i>Speed closed loop</i> control. Quick control is obtained at high amplification. Increasing amplification makes the process less stable. Use this parameter for values with 3 decimals. For values with 4 decimals, use <i>parameter 3-83 Quick Stop S-ramp Ratio at Decel. Start</i> . |
|---------------|---------|---|

| 7-03 Speed PID Integral Time | | |
|------------------------------|------------------|---|
| Range: | | Function: |
| Size related* | [1.0 - 20000 ms] | Enter the speed controller integral time, which determines the time the internal PID control takes to correct errors. The greater the error, the more quickly the gain increases. The integral time causes a delay of the signal and therefore a dampening effect and can be used to eliminate steady state speed error. Obtain quick control through a short integral time, though if the integral time is too short, the process becomes unstable. An excessively long integral time disables the integral action, leading to major deviations from the required reference, since the process regulator takes too long to regulate errors. This parameter is used with [0] Speed open loop and [1] Speed closed loop control, set in parameter 1-00 Configuration Mode. |

| 7-06 Speed PID Lowpass Filter Time | | | | | | | | | | | | |
|------------------------------------|--|---|-------------|--|-----|-------|------|------|------|------|------|------|
| Range: | | Function: | | | | | | | | | | |
| Size related* | [0.1 - 100 ms] | <p>NOTICE</p> <p>Severe filtering can be detrimental to dynamic performance.</p> <p>This parameter is used with parameter 1-00 Configuration Mode [1] Speed closed loop and [2] Torque control. Adjust the filter time in flux sensorless to 3–5 ms.</p> <p>Set a time constant for the speed control low-pass filter. The low-pass filter improves steady state performance and dampens oscillations on the feedback signal. This is an advantage if there is a great amount of noise in the system, see Illustration 3.47. For example, if a time constant (τ) of 100 ms is programmed, the cut-off frequency for the low-pass filter is $1/0.1=10$ RAD/s, corresponding to $(10/2 \times \pi) = 1.6$ Hz.</p> <p>The PID regulator only regulates a feedback signal that varies by a frequency of less than 1.6 Hz. If the feedback signal varies by a higher frequency than 1.6 Hz, the PID regulator does not react.</p> <p>Practical settings of parameter 7-06 Speed PID Lowpass Filter Time taken from the number of pulses per revolutions from encoder:</p> <table border="1"> <thead> <tr> <th>Encoder PPR</th> <th>Parameter 7-06 Speed PID Lowpass Filter Time</th> </tr> </thead> <tbody> <tr> <td>512</td> <td>10 ms</td> </tr> <tr> <td>1024</td> <td>5 ms</td> </tr> <tr> <td>2048</td> <td>2 ms</td> </tr> <tr> <td>4096</td> <td>1 ms</td> </tr> </tbody> </table> | Encoder PPR | Parameter 7-06 Speed PID Lowpass Filter Time | 512 | 10 ms | 1024 | 5 ms | 2048 | 2 ms | 4096 | 1 ms |
| Encoder PPR | Parameter 7-06 Speed PID Lowpass Filter Time | | | | | | | | | | | |
| 512 | 10 ms | | | | | | | | | | | |
| 1024 | 5 ms | | | | | | | | | | | |
| 2048 | 2 ms | | | | | | | | | | | |
| 4096 | 1 ms | | | | | | | | | | | |

Table 3.25 Speed PID Lowpass Filter Time

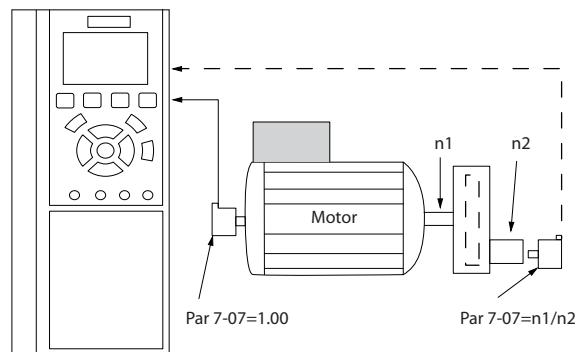

| 7-05 Speed PID Diff. Gain Limit | | |
|---------------------------------|----------|---|
| Range: | | Function: |
| 5* | [1 - 20] | Set a limit for the gain provided by the differentiator. Consider limiting the gain at higher frequencies. For example, set up a pure D-link at low frequencies and a constant D-link at higher frequencies. This parameter is used with parameter 1-00 Configuration Mode [1] Speed closed loop control. |

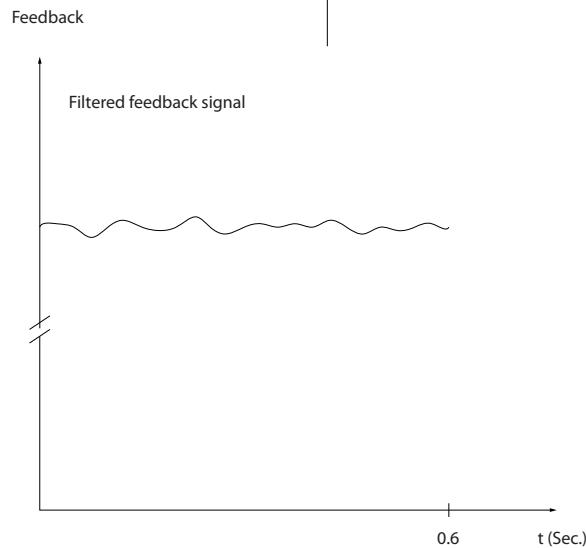

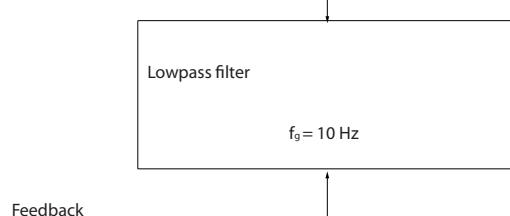

175ZA293.11

7-07 Speed PID Feedback Gear Ratio

| Range: | Function: |
|-------------------------|--|
| 1* [0.0001 - 32.0000] | The frequency converter multiplies the speed feedback by this ratio. |

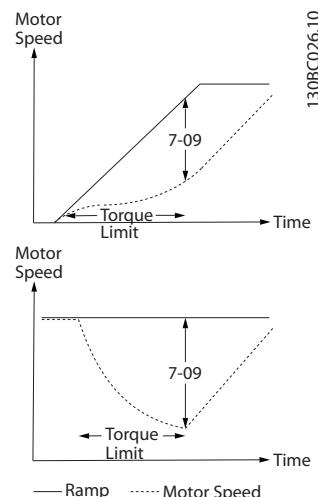

130BA871.10

Illustration 3.48 Speed PID Feedback Gear Ratio**Illustration 3.47 Feedback Signal****7-08 Speed PID Accel. Feed Forward Factor**

| Range: | Function: | |
|--------|--------------|---|
| 0 %* | [0 - 500 %] | The reference signal bypasses the speed controller by the amount specified. This feature increases the dynamic performance of the speed control loop. |

7-09 Speed PID Error Correction w/ Ramp

| Range: | Function: | |
|----------|---------------------|--|
| 300 RPM* | [10 - 100000 RPM] | The speed error between ramp and actual speed is held up against the setting in this parameter. If the speed error exceeds this parameter entry, the speed error is corrected via ramping in a controlled way. |

130BC026.10

Illustration 3.49 Speed Error between Ramp and Actual Speed

3.9.3 7-1* Torque PI Control

Parameters for configuring the torque PI control.

| 7-10 Torque PI Feedback Source | | |
|---|------------------|---|
| Select the feedback source for the torque controller. | | |
| Option: | Function: | |
| [0] * | Controller Off | Select to operate in open loop. |
| [1] | Analog Input 53 | Select to use torque feedback from the analog input. |
| [2] | Analog Input 54 | Select to use torque feedback from the analog input. |
| [3] | Estimated Torque | Select to use the torque feedback estimated by the frequency converter. |

| 7-12 Torque PI Proportional Gain | | |
|----------------------------------|-------------|---|
| Range: | Function: | |
| 100 %* | [0 - 500 %] | Enter the proportional gain value for the torque controller. Selection of a high value makes the controller react faster. Too high a setting leads to controller instability. |

| 7-13 Torque PI Integration Time | | |
|---------------------------------|---------------|--|
| Range: | Function: | |
| 0.020 s* | [0.002 - 2 s] | Enter the integration time for the torque controller. Selection of a low value makes the controller react faster. Too low a setting leads to controller instability. |

| 7-16 Torque PI Lowpass Filter Time | | |
|--|----------------|--|
| Enter the time constant for the torque control lowpass filter. | | |
| Range: | Function: | |
| 5 ms* | [0.1 - 100 ms] | |

| 7-18 Torque PI Feed Forward Factor | | |
|--|-------------|--|
| Enter the torque feed forward factor value. The reference signal bypasses the torque controller by this value. | | |
| Range: | Function: | |
| 0 %* | [0 - 100 %] | |

| 7-19 Current Controller Rise Time | | |
|-----------------------------------|--------------|--|
| Range: | Function: | |
| Size related* | [15 - 100 %] | Enter the value for the rise time of the current controller as a percentage of the control period. |

3.9.4 7-2* Process Ctrl. Feedb.

Select the feedback sources for the process PID control, and how this feedback should be handled.

| 7-20 Process CL Feedback 1 Resource | | |
|-------------------------------------|--|--|
| Option: | Function: | |
| | The effective feedback signal is made up of the sum of up to 2 different input signals. Select which frequency converter input should be treated as the source of the first of these signals. The second input signal is defined in parameter 7-22 Process CL Feedback 2 Resource. | |
| [0] * | No function | |
| [1] | Analog Input 53 | |
| [2] | Analog Input 54 | |
| [3] | Frequency input 29 | |
| [4] | Frequency input 33 | |
| [7] | Analog Input X30/11 | |
| [8] | Analog Input X30/12 | |
| [15] | Analog Input X48/2 | |

| 7-22 Process CL Feedback 2 Resource | | |
|-------------------------------------|--|--|
| Option: | Function: | |
| | The effective feedback signal is made up of the sum of up to 2 different input signals. Select which frequency converter input should be treated as the source of the second of these signals. The first input signal is defined in parameter 7-20 Process CL Feedback 1 Resource. | |
| [0] * | No function | |
| [1] | Analog Input 53 | |
| [2] | Analog Input 54 | |
| [3] | Frequency input 29 | |
| [4] | Frequency input 33 | |
| [7] | Analog Input X30/11 | |
| [8] | Analog Input X30/12 | |
| [15] | Analog Input X48/2 | |

3.9.5 7-3* Process PID Ctrl.

| 7-30 Process PID Normal/ Inverse Control | | |
|--|---------|---|
| Option: | | Function: |
| | | Normal and inverse controls are implemented by introducing a difference between the reference signal and the feedback signal. |
| [0] * | Normal | Sets process control to increase the output frequency. |
| [1] | Inverse | Sets process control to decrease the output frequency. |

| 7-31 Process PID Anti Windup | | |
|------------------------------|-----|---|
| Option: | | Function: |
| [0] | Off | Continues regulation of an error even when the output frequency cannot be increased or decreased. |
| [1] * | On | Ceases regulation of an error when the output frequency can no longer be adjusted. |

| 7-32 Process PID Start Speed | | |
|------------------------------|----------------|---|
| Range: | | Function: |
| 0 RPM* | [0 - 6000 RPM] | Enter the motor speed to be attained as a start signal for commencement of PID control. When the power is switched on, the frequency converter starts to ramp and then operates under speed open-loop control. When the process PID start speed is reached, the frequency converter changes to process PID control. |

| 7-33 Process PID Proportional Gain | | |
|------------------------------------|----------|---|
| Range: | | Function: |
| 0.01* | [0 - 10] | Enter the PID proportional gain. The proportional gain multiplies the error between the setpoint and the feedback signal. |

| 7-34 Process PID Integral Time | | |
|--------------------------------|------------------|---|
| Range: | | Function: |
| 10000 s* | [0.01 - 10000 s] | Enter the PID integral time. The integrator provides an increasing gain at a constant error between the setpoint and the feedback signal. The integral time is the time needed by the integrator to reach the same gain as the proportional gain. |

| 7-35 Process PID Differentiation Time | | |
|---------------------------------------|------------|--|
| Range: | | Function: |
| 0 s* | [0 - 10 s] | Enter the PID differentiation time. The differentiator does not react to a constant error, but provides a gain only when the error changes. The shorter the PID differentiation time, the stronger the gain from the differentiator. |

7-36 Process PID Diff. Gain Limit

| Range: | | Function: |
|--------|----------|--|
| 5* | [1 - 50] | Enter a limit for the differentiator gain. If there is no limit, the differentiator gain increases when there are fast changes. To obtain a pure differentiator gain at slow changes and a constant differentiator gain where fast changes occur, limit the differentiator gain. |

7-38 Process PID Feed Forward Factor

| Range: | | Function: |
|--------|-------------|--|
| 0 %* | [0 - 200 %] | Enter the PID feed forward factor. The factor sends a constant fraction of the reference signal to bypass the PID control, so the PID control only affects the remaining fraction of the control signal. Any change to this parameter affects the motor speed. When the feed forward factor is activated, it provides less overshoot and high dynamics when changing the set-point. <i>Parameter 7-38 Process PID Feed Forward Factor is active when parameter 1-00 Configuration Mode is set to [3] Process.</i> |

7-39 On Reference Bandwidth

| Range: | | Function: |
|--------|-------------|--|
| 5 %* | [0 - 200 %] | Enter the on-reference bandwidth. When the PID control error (the difference between the reference and the feedback) is less than the value of this parameter, the on-reference status bit is 1. |

3.9.6 7-4* Advanced Process PID Ctrl.

This parameter group is only used if *parameter 1-00 Configuration Mode* is set to [7] Extended PID speed CL or [8] Extended PID Speed OL.

7-40 Process PID I-part Reset

| Option: | | Function: |
|---------|-----|--|
| [0] * | No | |
| [1] | Yes | Select [1] Yes to reset the I-part of the process PID controller. The selection automatically returns to [0] No. Resetting the I-part makes it possible to start from a well-defined point after changing something in the process, for example changing a textile roll. |

7-41 Process PID Output Neg. Clamp

| Range: | | Function: |
|---------|----------------------|---|
| -100 %* | [-100 - par. 7-42 %] | Enter a negative limit for the process PID controller output. |

| 7-42 Process PID Output Pos. Clamp | | |
|------------------------------------|---|--|
| Range: | Function: | |
| 100 %* [par. 7-41 - 100 %] | Enter a positive limit for the process PID controller output. | |

| 7-43 Process PID Gain Scale at Min. Ref. | | |
|--|---|--|
| Range: | Function: | |
| 100 %* [0 - 100 %] | Enter a scaling percentage to apply to the process PID output when operating at the minimum reference. The scaling percentage is adjusted linearly between the scale at minimum reference (<i>parameter 7-43 Process PID Gain Scale at Min. Ref.</i>) and the scale at maximum reference (<i>parameter 7-44 Process PID Gain Scale at Max. Ref.</i>). | |

| 7-44 Process PID Gain Scale at Max. Ref. | | |
|--|---|--|
| Range: | Function: | |
| 100 %* [0 - 100 %] | Enter a scaling percentage to apply to the process PID output when operating at the maximum reference. The scaling percentage is adjusted linearly between the scale at minimum reference (<i>parameter 7-43 Process PID Gain Scale at Min. Ref.</i>) and the scale at maximum reference (<i>parameter 7-44 Process PID Gain Scale at Max. Ref.</i>). | |

| 7-45 Process PID Feed Fwd Resource | | |
|------------------------------------|---------------------|---|
| Option: | Function: | |
| [0] * | No function | Select which frequency converter input should be used as the feed forward factor. The factor is added to the output of the PID controller. This increases dynamic performance. |
| [1] | Analog Input 53 | |
| [2] | Analog Input 54 | |
| [7] | Frequency input 29 | |
| [8] | Frequency input 33 | |
| [11] | Local bus reference | |
| [20] | Digital pot.meter | |
| [21] | Analog input X30/11 | |
| [22] | Analog input X30/12 | |
| [29] | Analog Input X48/2 | |
| [32] | Bus PCD | Selects a fieldbus reference configured by <i>parameter 8-02 Control Word Source</i> . Change <i>parameter 8-42 PCD Write Configuration</i> for the bus used to make the feed-forward available in <i>parameter 7-48 PCD Feed Forward</i> . Use |

| 7-45 Process PID Feed Fwd Resource | | |
|------------------------------------|-----------|--|
| Option: | Function: | |
| | | index 1 for feed forward [748] (and index 2 for reference [1682]). |
| [36] | MCO | |

| 7-46 Process PID Feed Fwd Normal/ Inv. Ctrl. | | |
|--|-----------|---|
| Option: | Function: | |
| [0] * | Normal | Select [0] <i>Normal</i> to set the feed-forward factor to treat the FF resource as a positive value. |
| [1] | Inverse | Select [1] <i>Inverse</i> to treat the feed forward resource as a negative value. |

| 7-48 PCD Feed Forward | | |
|-----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 65535] | This parameter contains the value of <i>parameter 7-45 Process PID Feed Fwd Resource [32] Bus PCD</i> . | |

| 7-49 Process PID Output Normal/ Inv. Ctrl. | | |
|--|-----------|---|
| Option: | Function: | |
| [0] * | Normal | Select [0] <i>Normal</i> to use the resulting output from the process PID controller as is. |
| [1] | Inverse | Select [1] <i>Inverse</i> to invert the resulting output from the process PID controller. This operation is performed after the feed forward factor is applied. |

3.9.7 7-5* Ext. Process PID Ctrl.

This parameter group is only used if *parameter 1-00 Configuration Mode* is set to [7] *Extended PID speed CL* or [8] *Extended PID Speed OL*.

| 7-50 Process PID Extended PID | | |
|-------------------------------|-----------|--|
| Option: | Function: | |
| [0] | Disabled | Disables the extended parts of the process PID controller. |
| [1] * | Enabled | Enables the extended parts of the PID controller. |

| 7-51 Process PID Feed Fwd Gain | | |
|--------------------------------|--|--|
| Range: | Function: | |
| 1* [0 - 100] | The feed forward is used to obtain the required level, based on a well-known signal available. The PID controller then only takes care of the smaller part of the control, necessary because of unknown characters. The standard feed forward factor in <i>parameter 7-38 Process PID Feed Forward Factor</i> is always related to the reference, whereas <i>parameter 7-51 Process PID Feed Fwd Gain</i> has more options. In winder applications, the feed forward factor is typically the line speed of the system. | |

| 7-52 Process PID Feed Fwd Ramp up | | |
|-----------------------------------|---------------|---|
| Range: | | Function: |
| 0.01 s* | [0.01 - 10 s] | Controls the dynamics of the feed-forward signal when ramping up. |

| 7-53 Process PID Feed Fwd Ramp down | | |
|-------------------------------------|---------------|---|
| Range: | | Function: |
| 0.01 s* | [0.01 - 10 s] | Controls the dynamics of the feed-forward signal when ramping down. |

| 7-56 Process PID Ref. Filter Time | | |
|-----------------------------------|---------------|---|
| Range: | | Function: |
| 0.001 s* | [0.001 - 1 s] | Set a time constant for the reference first-order low-pass filter. The low-pass filter improves steady-state performance and dampens oscillations on the reference/feedback signals. However, severe filtering can be detrimental to dynamic performance. |

| 7-57 Process PID Fb. Filter Time | | |
|----------------------------------|---------------|--|
| Range: | | Function: |
| 0.001 s* | [0.001 - 1 s] | Set a time constant for the feedback first-order low-pass filter. The low-pass filter improves steady-state performance and dampens oscillations on the reference/feedback signals. However, severe filtering can be detrimental to dynamic performance. |

3.9.8 7-9* Position PI Ctrl.

Parameters for configuring the position controller.

7-90 Position PI Feedback Source

Select the feedback source for the position PI controller.

| Option: | Function: |
|---------|---|
| [0] * | Motor feedb. P1-02 Use the feedback source selected as motor feedback in parameter 1-02 Flux Motor Feedback Source. In flux sensorless control principle the estimated position from motor control is used. |
| [1] | 24V encoder NOTICE Set parameter 5-14 Terminal 32 Digital Input and parameter 5-15 Terminal 33 Digital Input to [0] No operation. |
| [2] | MCB 102 Encoder connected to an encoder option (B-option slot). Configure the encoder in parameter group 17-1* Inc. Enc. Interface. |
| [3] | MCB 103 Resolver connected to resolver option (B-option slot). Configure the resolver in parameter group 17-5* Resolver Interface. |

| 7-92 Position PI Proportional Gain | | |
|------------------------------------|-------------------|-----------|
| Range: | | Function: |
| 0.0150* | [0.0000 - 1.0000] | |

| 7-93 Position PI Integral Time | | |
|--------------------------------|--------------------|-----------|
| Range: | | Function: |
| 20000 ms* | [1.0 - 20000.0 ms] | |

| 7-94 Position PI Feedback Scale Numerator | | |
|---|----------------------------|-----------|
| Range: | | Function: |
| 1* | [-2000000000 - 2000000000] | |

| 7-95 Position PI Feedback Scale Denominator | | |
|---|----------------------------|-----------|
| Range: | | Function: |
| 1* | [-2000000000 - 2000000000] | |

| 7-97 Position PI Maximum Speed Above Master | | |
|---|----------------|-----------|
| Range: | | Function: |
| 100 RPM* | [0 - 1500 RPM] | |

| 7-98 Position PI Feed Forward Factor | | |
|--------------------------------------|-------------|-----------|
| Range: | | Function: |
| 98 %* | [0 - 110 %] | |

| 7-99 Position PI Minimum Ramp Time | | |
|------------------------------------|------------------|-----------|
| Range: | | Function: |
| 0.01 s* | [0.000 - 3600 s] | |

3.10 Parameters: 8-** Communications and Options

3.10.1 8-0* General Settings

| 8-01 Control Site | | |
|-------------------|-----------------------|---|
| Option: | Function: | |
| | | The setting in this parameter overrides the settings in <i>parameter 8-50 Coasting Select to parameter 8-56 Preset Reference Select</i> . |
| [0] | Digital and ctrl.word | Control by using both digital input and control word. |
| [1] | Digital only | Control by using digital inputs only. |
| [2] | Controlword only | Control by using control word only. |

| 8-02 Control Word Source | | |
|--------------------------|--------------|--|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor is running. Select the source of the control word: 1 of 2 serial interfaces or 4 installed options. During initial power-up, the frequency converter automatically sets this parameter to [3] Option A if it detects a valid fieldbus option installed in slot A. When the option is removed, the frequency converter detects a configuration change, sets <i>parameter 8-02 Control Word Source</i> to default setting [1] FC RS485, and trips. If an option is installed after initial power-up, the setting of <i>parameter 8-02 Control Word Source</i> does not change, but the frequency converter trips and shows: <i>Alarm 67, Option Changed</i> . When retrofitting a bus option into a frequency converter that did not have a bus option installed earlier, change the control to bus-based. This change is required for safety reasons to avoid an unintended change. |
| [0] | None | |
| [1] | FC RS485 | |
| [2] | FC USB | |
| [3] | Option A | |
| [4] | Option B | |
| [5] | Option C0 | |
| [6] | Option C1 | |
| [30] | External Can | |

8-03 Control Word Timeout Time

| Range: | Function: |
|-------------------------|---|
| 20 s* [0.1 - 18000.0 s] | Enter the maximum time expected to pass between the reception of 2 consecutive telegrams. If this time is exceeded, it indicates that the serial communication has stopped. The function selected in <i>parameter 8-04 Control Word Timeout Function</i> is then carried out. A valid control word triggers the time-out counter. |

8-04 Control Word Timeout Function

Select the timeout function. The timeout function activates when the control word fails to be updated within the time period specified in *parameter 8-03 Control Word Timeout Time*.

| Option: | Function: | |
|---------|----------------|---|
| | | NOTICE To change the set-up after a timeout, configure as follows: <ol style="list-style-type: none"> Set <i>parameter 0-10 Active Set-up</i> to [9] Multi set-up. Select the relevant link in <i>parameter 0-12 This Set-up Linked to</i>. |
| [0] | Off | Resumes control via fieldbus (fieldbus or standard), using the most recent control word. |
| [1] | Freeze output | Freezes output frequency until communication resumes. |
| [2] | Stop | Stops with auto restart when communication resumes. |
| [3] | Jogging | Runs the motor at jog frequency until communication resumes. |
| [4] | Max. speed | Runs the motor at maximum frequency until communication resumes. |
| [5] | Stop and trip | Stops the motor, then resets the frequency converter to restart: <ul style="list-style-type: none"> Via the fieldbus. Via [Reset]. Via a digital input. |
| [7] | Select setup 1 | Changes the set-up after a control word timeout. If communication resumes after a timeout, <i>parameter 8-05 End-of-TIMEout Function</i> either resumes the set-up used before the timeout, or retains the set-up endorsed by the timeout function. |
| [8] | Select setup 2 | See [7] Select set-up 1. |
| [9] | Select setup 3 | See [7] Select set-up 1. |
| [10] | Select setup 4 | See [7] Select set-up 1. |

| 8-04 Control Word Timeout Function | | |
|--|----------------------|---|
| Select the timeout function. The timeout function activates when the control word fails to be updated within the time period specified in parameter 8-03 Control Word Timeout Time. | | |
| Option: | | Function: |
| [26] Trip | | |
| 8-05 End-of-Timeout Function | | |
| Option: | | Function: |
| | | Select the action after receiving a valid control word following a timeout. This parameter is active only when parameter 8-04 Control Timeout Function is set to: <ul style="list-style-type: none">• [7] Set-up 1.• [8] Set-up 2.• [9] Set-up 3.• [10] Set-up 4. |
| [0] | Hold set-up | Retains the set-up selected in parameter 8-04 Control Timeout Function and shows a warning until parameter 8-06 Reset Control Timeout toggles. Then the frequency converter resumes its original set-up. |
| [1] * | Resume set-up | Resumes the set-up that was active before the timeout. |
| 8-06 Reset Control Word Timeout | | |
| This parameter is active only when [0] Hold set-up has been selected in parameter 8-05 End-of-Timeout Function. | | |
| Option: | | Function: |
| [0] * | Do not reset | Retains the set-up specified in parameter 8-04 Control Word Timeout Function, following a control word timeout. |
| [1] | Do reset | Restores the frequency converter to the original set-up following a control word timeout. The frequency converter performs the reset and then immediately reverts to the [0] Do not reset setting. |
| 8-07 Diagnosis Trigger | | |
| This parameter has no function for DeviceNet. | | |
| Option: | | Function: |
| [0] * | Disable | |
| [1] | Trigger on alarms | |
| [2] | Trigger alarm/warn. | |
| 8-08 Readout Filtering | | |
| If the speed feedback value readouts on fieldbus are fluctuating, this function is used. Select filtered, if the function is required. A power cycle is required for changes to take effect. | | |
| Option: | | Function: |
| [0] | Motor Data Std-Filt. | Normal fieldbus readouts. |

| 8-08 Readout Filtering | | |
|--|----------------------|---|
| If the speed feedback value readouts on fieldbus are fluctuating, this function is used. Select filtered, if the function is required. A power cycle is required for changes to take effect. | | |
| Option: | | Function: |
| [1] | Motor Data LP-Filter | Filtered fieldbus readouts of the following parameters: <ul style="list-style-type: none">• Parameter 16-10 Power [kW].• Parameter 16-11 Power [hp].• Parameter 16-12 Motor Voltage.• Parameter 16-14 Motor current.• Parameter 16-16 Torque [Nm].• Parameter 16-17 Speed [RPM].• Parameter 16-22 Torque [%].• Parameter 16-25 Torque [Nm] High. |

3.10.2 8-1* Ctrl. Word Settings

| 8-10 Control Word Profile | | |
|--|--------------------|--|
| Select the interpretation of the control and status words corresponding to the installed fieldbus. Only the selections valid for the fieldbus installed in slot A are visible in the LCP display. For guidelines in selection of [0] FC profile and [1] PROFIdrive profile, refer to the design guide. For more guidelines in the selection of [1] PROFIdrive profile, refer to the operating instructions for the installed fieldbus. | | |
| Option: | | Function: |
| [0] | FC profile | |
| [1] | PROFIdrive profile | |
| [3] | FC Motion Profile | Assigns motion-specific functions to various control and status word bits. This option is available when [9] Positioning or [10] Synchronization is selected in parameter 1-00 Configuration Mode. |
| [5] | ODVA | |
| [7] | CANopen DSP 402 | |

| 8-13 Configurable Status Word STW | | |
|--|--------------------|--|
| The status word has 16 bits (0-15). Bits 5 and 12-15 are configurable. Each of these bits can be configured to any of the following options. | | |
| Option: | | Function: |
| [0] | No function | The input is always low. |
| [1] * | Profile Default | Depending on the profile set in parameter 8-10 Control Profile. |
| [2] | Alarm 68 Only | The input goes high whenever alarm 68, Safe Torque Off activated is active, and goes low whenever alarm 68, Safe Torque Off activated is not active. |
| [3] | Trip excl Alarm 68 | |

| 8-13 Configurable Status Word STW | | |
|-----------------------------------|------------------------|--|
| Option: | Function: | |
| [4] | Position Error | The position error exceeds the value of <i>parameter 4-71 Maximum Position Error</i> during the time in <i>parameter 4-72 Position Error Timeout</i> . |
| [5] | Position Limit | A position limit is reached. |
| [6] | Touch on Target | Target position reached in touch position mode. |
| [7] | Touch Activated | Touch position mode is active. |
| [10] | T18 DI status | |
| [11] | T19 DI status | |
| [12] | T27 DI status | |
| [13] | T29 DI status | |
| [14] | T32 DI status | |
| [15] | T33 DI status | |
| [16] | T37 DI status | The input goes high whenever terminal 37 has 0 V and goes low whenever terminal 37 has 24 V. |
| [21] | Thermal warning | |
| [30] | Brake fault (IGBT) | |
| [40] | Out of ref range | |
| [41] | Load throttle active | |
| [60] | Comparator 0 | |
| [61] | Comparator 1 | |
| [62] | Comparator 2 | |
| [63] | Comparator 3 | |
| [64] | Comparator 4 | |
| [65] | Comparator 5 | |
| [70] | Logic Rule 0 | |
| [71] | Logic Rule 1 | |
| [72] | Logic Rule 2 | |
| [73] | Logic Rule 3 | |
| [74] | Logic Rule 4 | |
| [75] | Logic Rule 5 | |
| [80] | SL digital out A | |
| [81] | SL digital out B | |
| [82] | SL digital out C | |
| [83] | SL digital out D | |
| [84] | SL digital out E | |
| [85] | SL digital out F | |
| [86] | ATEX ETR cur. alarm | |
| [87] | ATEX ETR freq. alarm | |
| [88] | ATEX ETR cur. warning | |
| [89] | ATEX ETR freq. warning | |
| [90] | Safe Function active | |
| [91] | Safe Opt. Reset req. | |

| 8-14 Configurable Control Word CTW | | |
|------------------------------------|-----------------------|---|
| Option: | Function: | |
| | | This parameter is not valid in software versions before 4.93. |
| [0] | None | The frequency converter ignores the information in this bit. |
| [1] * | Profile default | The functionality of the bit is depending on the selection <i>parameter 8-10 Control Word Profile</i> . |
| [2] | CTW Valid, active low | If set to 1, the frequency converter ignores the remaining bits of the control word. |
| [3] | Safe Option Reset | This function is only available in bits 12-15 of the control word, if a safety option is mounted in the frequency converter. The reset is executed on a 0→1 transition, and resets the safety option as set in <i>parameter 42-24 Restart Behaviour</i> . |
| [4] | PID error inverse | Inverts the resulting error from the process PID controller. Available only if <i>parameter 1-00 Configuration Mode</i> is set to [6] Surface Winder, [7] Extended PID Speed OL, or [8] Extended PID Speed CL. |
| [5] | PID reset I part | Resets the I-part of the process PID controller. Equivalent to <i>parameter 7-40 Process PID I-part Reset</i> . Available only if <i>parameter 1-00 Configuration Mode</i> is set to [6] Surface Winder, [7] Extended PID Speed OL, or [8] Extended PID Speed CL. |
| [6] | PID enable | Enables the extended process PID controller. Equivalent to <i>parameter 7-50 Process PID Extended PID</i> . Available only if <i>parameter 1-00 Configuration Mode</i> is set to [6] Surface Winder, [7] Extended PID Speed OL, or [8] Extended PID Speed CL. |
| [11] | Start Homing | Starts the homing function selected in <i>parameter 17-80 Homing Function</i> . Must remain high until homing is completed otherwise homing is aborted. |
| [12] | Activate Touch | Select touch probe positioning mode. This option activates monitoring of the touch probe sensor input. |
| [13] | Sync. to Pos. Mode | Select positioning in synchronization mode. |
| [14] | Ramp 2 | Select between ramp 1 (parameter group 3-4* Ramp 1) and ramp 2 (parameter group 3-5* Ramp 2). |
| [15] | Relay 1 | Control relay 1. |
| [16] | Relay2 | Control relay 2. |

| 8-17 Configurable Alarm and Warningword | | |
|---|--------------------------------------|--|
| The configurable alarm and warning word has 16 bits (0-15). Each of those bits can be configured to any of the following options. | | |
| Option: | Function: | |
| [0] * | Off | |
| [1] | 10 Volts low warning | |
| [2] | Live zero warning | |
| [3] | No motor warning | |
| [4] | Mains phase loss warning | |
| [5] | DC link voltage high warning | |
| [6] | DC link voltage low warning | |
| [7] | DC overvoltage warning | |
| [8] | DC undervoltage warning | |
| [9] | Inverter overloaded warning | |
| [10] | Motor ETR overtemp warning | |
| [11] | Motor thermistor overtemp warning | |
| [12] | Torque limit warning | |
| [13] | Over current warning | |
| [14] | Earth fault warning | |
| [17] | Controlword timeout warning | |
| [19] | Discharge temp high warning | |
| [22] | Hoist mech brake warning | |
| [23] | Internal fans warning | |
| [24] | External fans warning | |
| [25] | Brake resistor short circuit warning | |
| [26] | Brake powerlimit warning | |
| [27] | Brake chopper short circuit warning | |
| [28] | Brake check warning | |
| [29] | Heatsink temperature warning | |
| [30] | Motor phase U warning | |
| [31] | Motor phase V warning | |
| [32] | Motor phase W warning | |
| [34] | Fieldbus communication warning | |
| [36] | Mains failure warning | |
| [40] | T27 overload warning | |
| [41] | T29 overload warning | |
| [45] | Earth fault 2 warning | |
| [47] | 24V supply low warning | |
| [58] | AMA internal fault warning | |
| [59] | Current limit warning | |
| [60] | External interlock warning | |
| [61] | Feedback error warning | |
| [62] | Frequency max warning | |
| [64] | Voltage limit warning | |
| [65] | Controlboard overtemp warning | |
| [66] | Heatsink temp low warning | |
| [68] | Safe stop warning | |
| [73] | Safe stop autorestart warning | |
| [76] | Power unit setup warning | |
| [77] | Reduced powermode warning | |
| [78] | Tracking error warning | |
| [89] | Mech brake sliding warning | |
| [163] | ATEX ETR cur limit warning | |

| 8-17 Configurable Alarm and Warningword | | |
|---|---------------------------------|--|
| The configurable alarm and warning word has 16 bits (0-15). Each of those bits can be configured to any of the following options. | | |
| Option: | Function: | |
| [165] | ATEX ETR freq limit warning | |
| [10002] | Live zero error alarm | |
| [10004] | Mains phase loss alarm | |
| [10007] | DC overvoltage alarm | |
| [10008] | DC undervoltage alarm | |
| [10009] | Inverter overload alarm | |
| [10010] | ETR overtemperature alarm | |
| [10011] | Thermistor overtemp alarm | |
| [10012] | Torque limit alarm | |
| [10013] | Overcurrent alarm | |
| [10014] | Earth fault alarm | |
| [10016] | Short circuit alarm | |
| [10017] | CTW timeout alarm | |
| [10022] | Hoist brake alarm | |
| [10026] | Brake powerlimit alarm | |
| [10027] | Brakechopper shortcircuit alarm | |
| [10028] | Brake check alarm | |
| [10029] | Heatsink temp alarm | |
| [10030] | Phase U missing alarm | |
| [10031] | Phase V missing alarm | |
| [10032] | Phase W missing alarm | |
| [10033] | Inrush fault alarm | |
| [10034] | Fieldbus com faul alarm | |
| [10036] | Mains failure alarm | |
| [10037] | Phase imbalance alarm | |
| [10038] | Internal fault | |
| [10039] | Heatsink sensor alarm | |
| [10045] | Earth fault 2 alarm | |
| [10046] | Powercard supply alarm | |
| [10047] | 24V supply low alarm | |
| [10048] | 1.8V supply low alarm | |
| [10049] | Speed limit alarm | |
| [10060] | Ext interlock alarm | |
| [10061] | Feedback error alarm | |
| [10063] | Mech brake low alarm | |
| [10065] | Controlboard overtemp alarm | |
| [10067] | Option config changed alarm | |
| [10068] | Safe stop alarm | |
| [10069] | Powercard temp alarm | |
| [10073] | Safestop auto restart alarm | |
| [10074] | PTC thermistor alarm | |
| [10078] | Tracking error alarm | |
| [10079] | Illegal PS config alarm | |
| [10081] | CSIV corrupt alarm | |
| [10082] | CSIV param error alarm | |
| [10084] | No safety option alarm | |
| [10090] | Feedback monitor alarm | |
| [10091] | AI54 settings alarm | |
| [10164] | ATEX ETR current lim alarm | |

8-17 Configurable Alarm and Warningword

The configurable alarm and warning word has 16 bits (0-15). Each of those bits can be configured to any of the following options.

Option: **Function:**

| | | |
|---------|---------------------------|--|
| [10166] | ATEX ETR freq limit alarm | |
|---------|---------------------------|--|

8-19 Product Code

Range: **Function:**

| | | |
|---------------|------------------|--|
| Size related* | [0 - 2147483647] | Select 0 to read out the actual fieldbus product code according to the mounted fieldbus option. Select 1 to read out the actual vendor ID. |
|---------------|------------------|--|

3.10.3 8-3* FC Port Settings**8-30 Protocol**

Option: **Function:**

| | | |
|-------|------------|--|
| | | Select the protocol to be used. Changing protocol is not effective until after powering off the frequency converter. |
| [0] * | FC | |
| [1] | FC MC | |
| [2] | Modbus RTU | |

8-31 Address

Range: **Function:**

| | | |
|---------------|-------------|---|
| Size related* | [1 - 255] | Enter the address for the frequency converter (standard) port. Valid range: 1-126. |
|---------------|-------------|---|

8-32 FC Port Baud Rate

Option: **Function:**

| | | |
|-----|-------------|---|
| [0] | 2400 Baud | Baud rate selection for the FC (standard) port. |
| [1] | 4800 Baud | |
| [2] | 9600 Baud | |
| [3] | 19200 Baud | |
| [4] | 38400 Baud | |
| [5] | 57600 Baud | |
| [6] | 76800 Baud | |
| [7] | 115200 Baud | |

8-33 Parity / Stop Bits

Option: **Function:**

| | | |
|-------|-------------------------|--|
| [0] * | Even Parity, 1 Stop Bit | |
| [1] | Odd Parity, 1 Stop Bit | |
| [2] | No Parity, 1 Stop Bit | |
| [3] | No Parity, 2 Stop Bits | |

8-34 Estimated cycle time

Range: **Function:**

| | | |
|-------|------------------|--|
| 0 ms* | [0 - 1000000 ms] | In noisy environments, the interface may be blocked due to overload or bad frames. |
|-------|------------------|--|

8-34 Estimated cycle time

Range: **Function:**

| | | |
|--|--|---|
| | | This parameter specifies the time between 2 consecutive frames on the network. If the interface does not detect valid frames in that time, it flushes the receive buffer. |
|--|--|---|

8-35 Minimum Response Delay

Range: **Function:**

| | | |
|--------|-----------------|--|
| 10 ms* | [1 - 10000 ms] | Specify the minimum delay time between receiving a request and transmitting a response. This is used for overcoming modem turnaround delays. |
|--------|-----------------|--|

8-36 Max Response Delay

Range: **Function:**

| | | |
|---------------|------------------|---|
| Size related* | [11 - 10001 ms] | Specify the maximum permissible delay time between transmitting a request and receiving a response. If a response from the frequency converter is exceeding the time setting, then it is discarded. |
|---------------|------------------|---|

8-37 Max Inter-Char Delay

Range: **Function:**

| | | |
|---------------|--------------------|--|
| Size related* | [0.00 - 35.00 ms] | Specify the maximum permissible time interval between receipt of 2 bytes. This parameter activates timeout if transmission is interrupted. This parameter is active only when parameter 8-30 Protocol is set to [1] FC MC protocol. |
|---------------|--------------------|--|

3.10.4 8-4* FC MC Protocol Set**8-40 Telegram Selection**

Option: **Function:**

| | | |
|-------|---------------------|---|
| [1] * | Standard telegram 1 | Enables use of freely configurable telegrams or standard telegrams for the FC port. |
| [100] | None | |
| [101] | PPO 1 | |
| [102] | PPO 2 | |
| [103] | PPO 3 | |
| [104] | PPO 4 | |
| [105] | PPO 5 | |
| [106] | PPO 6 | |
| [107] | PPO 7 | |
| [108] | PPO 8 | |
| [200] | Custom telegram 1 | Enables use of freely configurable telegrams or standard telegrams for the FC port. |
| [202] | Custom telegram 3 | |

| 8-41 Parameters for Signals | | |
|-----------------------------|------------------------------------|---|
| Option: | Function: | |
| [0] * | None | This parameter contains a list of signals available for selection in <i>parameter 8-42 PCD Write Configuration</i> and <i>parameter 8-43 PCD Read Configuration</i> . |
| [15] | Readout: actual setup | |
| [302] | Minimum/Offset Reference | |
| [303] | Maximum Reference | |
| [312] | Catch up/slow Down Value | |
| [321] | Touch Target | |
| [326] | Master Offset | |
| [341] | Ramp 1 Ramp Up Time | |
| [342] | Ramp 1 Ramp Down Time | |
| [351] | Ramp 2 Ramp Up Time | |
| [352] | Ramp 2 Ramp Down Time | |
| [380] | Jog/Homing Ramp Time | |
| [381] | Quick Stop Ramp Time | |
| [411] | Motor Speed Low Limit [RPM] | |
| [412] | Motor Speed Low Limit [Hz] | |
| [413] | Motor Speed High Limit [RPM] | |
| [414] | Motor Speed High Limit [Hz] | |
| [416] | Torque Limit Motor Mode | |
| [417] | Torque Limit Generator Mode | |
| [553] | Term. 29 High Ref./Feedb. Value | |
| [558] | Term. 33 High Ref./Feedb. Value | |
| [590] | Digital & Relay Bus Control | |
| [593] | Pulse Out #27 Bus Control | |
| [595] | Pulse Out #29 Bus Control | |
| [597] | Pulse Out #X30/6 Bus Control | |
| [615] | Terminal 53 High Ref./Feedb. Value | |
| [625] | Terminal 54 High Ref./Feedb. Value | |
| [653] | Term 42 Output Bus Ctrl | |
| [663] | Terminal X30/8 Bus Control | |
| [673] | Terminal X45/1 Bus Control | |
| [683] | Terminal X45/3 Bus Control | |
| [890] | Bus Jog 1 Speed | |
| [891] | Bus Jog 2 Speed | |
| [1472] | Legacy Alarm Word | |
| [1473] | Legacy Warning Word | |
| [1474] | Leg. Ext. Status Word | |
| [1500] | Operating hours | |
| [1501] | Running Hours | |
| [1502] | kWh Counter | |
| [1600] | Control Word | |
| [1601] | Reference [Unit] | |
| [1602] | Reference % | |
| [1603] | Status Word | |
| [1605] | Main Actual Value [%] | |

| 8-41 Parameters for Signals | | |
|-----------------------------|------------------------------|--|
| Option: | Function: | |
| [1606] | Actual Position | |
| [1607] | Target Position | |
| [1608] | Position Error | |
| [1609] | Custom Readout | |
| [1610] | Power [kW] | |
| [1611] | Power [hp] | |
| [1612] | Motor Voltage | |
| [1613] | Frequency | |
| [1614] | Motor current | |
| [1615] | Frequency [%] | |
| [1616] | Torque [Nm] | |
| [1617] | Speed [RPM] | |
| [1618] | Motor Thermal | |
| [1619] | KTY sensor temperature | |
| [1620] | Motor Angle | |
| [1621] | Torque [%] High Res. | |
| [1622] | Torque [%] | |
| [1623] | Motor Shaft Power [kW] | |
| [1624] | Calibrated Stator Resistance | |
| [1625] | Torque [Nm] High | |
| [1630] | DC Link Voltage | |
| [1632] | Brake Energy /s | |
| [1633] | Brake Energy Average | |
| [1634] | Heatsink Temp. | |
| [1635] | Inverter Thermal | |
| [1638] | SL Controller State | |
| [1639] | Control Card Temp. | |
| [1644] | Speed Error [RPM] | |
| [1645] | Motor Phase U Current | |
| [1646] | Motor Phase V Current | |
| [1647] | Motor Phase W Current | |
| [1648] | Speed Ref. After Ramp [RPM] | |
| [1650] | External Reference | |
| [1651] | Pulse Reference | |
| [1652] | Feedback[Unit] | |
| [1653] | Digi Pot Reference | |
| [1657] | Feedback [RPM] | |
| [1660] | Digital Input | |
| [1661] | Terminal 53 Switch Setting | |
| [1662] | Analog Input 53 | |
| [1663] | Terminal 54 Switch Setting | |

| 8-42 PCD Write Configuration | | |
|------------------------------|------------|--|
| Range: | Function: | |
| Size related* | [0 - 9999] | Select the parameters to be assigned to the PCD's telegrams. The number of available PCDs depends on the telegram type. The values in the PCDs are then written to the selected parameters as data values. |

| 8-43 PCD Read Configuration | | |
|-----------------------------|------------|---|
| Range: | Function: | |
| Size related* | [0 - 9999] | Select the parameters to be assigned to the PCDs of the telegrams. The number of available PCDs depends on the telegram type. PCDs contain the actual data values of the selected parameters. |

| 8-45 BTM Transaction Command | | |
|------------------------------|--|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor runs. | |
| [0] * | Off | |

| 8-45 BTM Transaction Command | | |
|------------------------------|--------------------|--|
| Option: | Function: | |
| [1] | Start Transaction | |
| [2] | Commit transaction | |
| [3] | Clear error | |

| 8-46 BTM Transaction Status | | |
|-----------------------------|------------------------|--|
| Option: | Function: | |
| [0] * | Off | |
| [1] | Transaction Started | |
| [2] | Transaction Committing | |
| [3] | Transaction Timeout | |
| [4] | Err. Non-existing Par. | |
| [5] | Err. Par. Out of Range | |
| [6] | Transaction Failed | |

| 8-47 BTM Timeout | | |
|------------------|-------------|--|
| Range: | Function: | |
| 60 s* | [1 - 360 s] | Select the BTM timeout after a BTM transaction has been started. |

| 8-48 BTM Maximum Errors | | |
|-------------------------|-----------|--|
| Range: | Function: | |
| 21* | [0 - 21] | Selects the maximum allowed number of bulk transfer mode errors before aborting. If it is set to maximum, there is no abort. |

| 8-49 BTM Error Log | | |
|--------------------|--------------------|--|
| Range: | Function: | |
| 0.255* | [0.000 - 9999.255] | List of parameters that failed during bulk transfer mode. The value after the decimal break is the fault code (255 stands for no error). |

3.10.5 8-5* Digital/Bus

Parameters for configuring the control word merging.

NOTICE

These parameters are active only when parameter 8-01 Control Site is set to [0] Digital and control word.

| 8-50 Coasting Select | | |
|----------------------|---------------|---|
| Option: | Function: | |
| | | Select control of the coasting function via the terminals (digital input) and/or via the bus. |
| [0] | Digital input | Activates start command via a digital input. |
| [1] | Bus | Activates start command via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates start command via the fieldbus/serial communication port and 1 extra digital input. |

| 8-50 Coasting Select | | |
|----------------------|-----------|--|
| Option: | Function: | |
| [3] * | Logic OR | Activates start command via the fieldbus/serial communication port or via 1 of the digital inputs. |

| 8-51 Quick Stop Select | | |
|------------------------|---------------|--|
| Option: | Function: | |
| [0] | Digital input | |
| [1] | Bus | |
| [2] | Logic AND | |
| [3] * | Logic OR | |

| 8-52 DC Brake Select | | |
|----------------------|---------------|---|
| Option: | Function: | |
| | | Select control of the DC brake via the terminals (digital input) and/or via the fieldbus. NOTICE When parameter 1-10 Motor Construction is set to [1] PM non-salient SPM, only selection [0] Digital input is available. |
| [0] | Digital input | Activates a start command via a digital input. |
| [1] | Bus | Activates a start command via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates a start command via the fieldbus/serial communication port, and also via 1 of the digital inputs. |
| [3] | Logic OR | Activates a start command via the fieldbus/serial communication port, or via 1 of the digital inputs. |

| 8-53 Start Select | | |
|-------------------|---------------|---|
| Option: | Function: | |
| | | Select control of the frequency converter start function via the terminals (digital input) and/or via the fieldbus. |
| [0] | Digital input | Activates a start command via a digital input. |
| [1] | Bus | Activates a start command via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates a start command via the fieldbus/serial communication port and also via 1 of the digital inputs. |
| [3] * | Logic OR | Activates a start command via the fieldbus/serial communication port or via 1 of the digital inputs. |

| 8-54 Reversing Select | | |
|-----------------------|---------------|---|
| Option: | Function: | |
| [0] | Digital input | Select control of the frequency converter reverse function via the terminals (digital input) and/or via the fieldbus. |
| [1] | Bus | Activates the reverse command via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates the reverse command via the fieldbus/serial communication port and also via 1 of the digital inputs. |
| [3] * | Logic OR | Activates the reverse command via the fieldbus/serial communication port or via 1 of the digital inputs. |

| 8-55 Set-up Select | | |
|--------------------|---------------|---|
| Option: | Function: | |
| | | Select control of the frequency converter set-up selection via the terminals (digital input) and/or via the fieldbus. |
| [0] | Digital input | Activates the set-up selection via a digital input. |
| [1] | Bus | Activates the set-up selection via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates the set-up selection via the fieldbus/serial communication port and via 1 of the digital inputs. |
| [3] * | Logic OR | Activates the set-up selection via the fieldbus/serial communication port or via 1 of the digital inputs. |

| 8-56 Preset Reference Select | | |
|------------------------------|---------------|---|
| Option: | Function: | |
| | | Select control of the preset reference selection via the terminals (digital input) and/or via the fieldbus. |
| [0] | Digital input | Activates preset reference selection via a digital input. |
| [1] | Bus | Activates preset reference selection via the serial communication port or fieldbus option. |
| [2] | Logic AND | Activates preset reference selection via the fieldbus/serial communication port and via 1 of the digital inputs. |
| [3] * | Logic OR | Activates the preset reference selection via the fieldbus/serial communication port or via 1 of the digital inputs. |

8-57 Profidrive OFF2 Select

Select control of the frequency converter OFF2 selection via the terminals (digital input) and/or via the fieldbus. This parameter is active only when *parameter 8-01 Control Site* is set to [0] *Digital and ctrl. word*, and *parameter 8-10 Control Word Profile* is set to [1] *Profidrive profile*.

Option: **Function:**

| | | |
|-------|---------------|--|
| [0] | Digital input | |
| [1] | Bus | |
| [2] | Logic AND | |
| [3] * | Logic OR | |

8-58 Profidrive OFF3 Select

Select control of the frequency converter OFF3 selection via the terminals (digital input) and/or via the fieldbus. This parameter is active only when *parameter 8-01 Control Site* is set to [0] *Digital and ctrl. word*, and *parameter 8-10 Control Word Profile* is set to [1] *Profidrive profile*.

Option: **Function:**

| | | |
|-------|---------------|--|
| [0] | Digital input | |
| [1] | Bus | |
| [2] | Logic AND | |
| [3] * | Logic OR | |

3.10.7 8-9* Bus Jog**8-90 Bus Jog 1 Speed**

Range: **Function:**

| | | |
|----------|----------------------|--|
| 100 RPM* | [0 - par. 4-13 RPM] | Enter the jog speed. Activate this fixed jog speed via the serial port or fieldbus option. |
|----------|----------------------|--|

8-91 Bus Jog 2 Speed

Range: **Function:**

| | | |
|----------|----------------------|--|
| 200 RPM* | [0 - par. 4-13 RPM] | Enter the jog speed. Activate this fixed jog speed via the serial port or fieldbus option. |
|----------|----------------------|--|

3.10.6 8-8* FC Port Diagnostics

These parameters are used for monitoring the bus communication via the frequency converter port.

8-80 Bus Message Count

Range: **Function:**

| | | |
|----|-----------|---|
| 0* | [0 - 0] | This parameter shows the number of valid telegrams detected on the bus. |
|----|-----------|---|

8-81 Bus Error Count

Array [6]

Range: **Function:**

| | | |
|----|-----------|---|
| 0* | [0 - 0] | This parameter shows the number of telegrams with faults (for example CRC fault) detected on the bus. |
|----|-----------|---|

8-82 Slave Messages Rcvd

Range: **Function:**

| | | |
|----|-----------|--|
| 0* | [0 - 0] | This parameter shows the number of valid telegrams addressed to the slave sent by the frequency converter. |
|----|-----------|--|

8-83 Slave Error Count

Range: **Function:**

| | | |
|----|-----------|---|
| 0* | [0 - 0] | This parameter shows the number of error telegrams, which could not be executed by the frequency converter. |
|----|-----------|---|

3.11 Parameters: 9-** PROFIBUS

For PROFIBUS parameter descriptions, see the *VLT® PROFIBUS DP MCA 101 Programming Guide*.

3.12 Parameters: 10-** DeviceNet CAN Fieldbus

For DeviceNet parameter descriptions, see the *DeviceNet Operating Instructions*.

3.13 Parameters: 12-** Ethernet

For Ethernet parameter descriptions, see the *VLT® EtherNet/IP MCA 121 Operating Instructions*.

3.14 Parameters: 13-** Smart Logic Control

Smart logic control (SLC) is a sequence of user-defined actions (see *parameter 13-52 SL Controller Action*) executed by the SLC when the associated user-defined event (see *parameter 13-51 SL Controller Event*) is evaluated as true by the SLC.

The condition for an event can be a particular status, or that the output from a logic rule or a comparator operand becomes true. That leads to an associated action as illustrated:

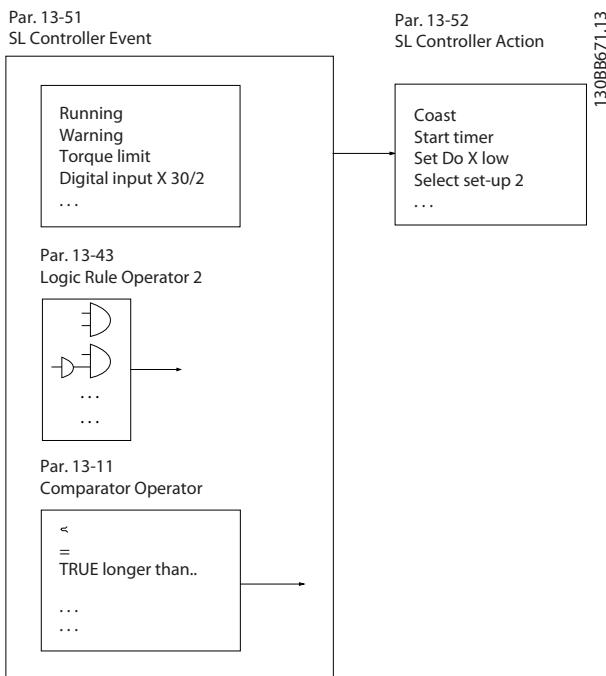

Illustration 3.50 Smart Logic Control (SLC)

Events and actions are each numbered and linked in pairs (states). This means that when the first event is fulfilled (becomes true), the first action is executed. After this, the conditions of the 2nd event are evaluated and if evaluated true, the 2nd action is executed, and so on. Only 1 event is evaluated at any time. If an event is evaluated as false, nothing happens (in the SLC) during the current scan interval and no other events are evaluated. This means that when the SLC starts, it evaluates the first event (and only the first event) in each scan interval. Only when the first event is evaluated true, the SLC executes the first action and starts evaluating the 2nd event. It is possible to program 1–20 events and actions.

When the last event/action has been executed, the sequence starts over again from the first event/action.

Illustration 3.51 shows an example with 3 events/actions:

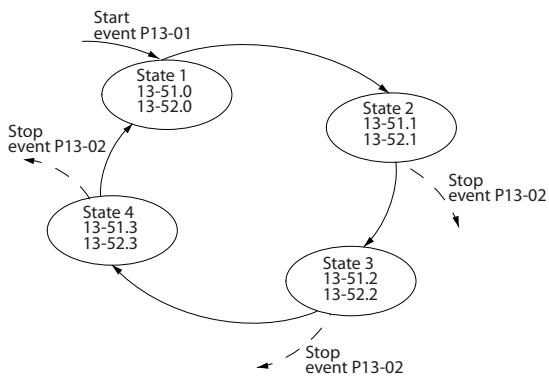

Illustration 3.51 Events and Actions

130BA062.14

3

Starting and stopping the SLC

Start and stop the SLC by selecting [1] On or [0] Off in *parameter 13-00 SL Controller Mode*. The SLC always starts in state 0 (where it evaluates event [0]). The SLC starts when the *Start Event* (defined in *parameter 13-01 Start Event*) is evaluated as true (provided that [1] On is selected in *parameter 13-00 SL Controller Mode*). The SLC stops when the *stop event* (*parameter 13-02 Stop Event*) is true.

Parameter 13-03 Reset SLC resets all SLC parameters and starts programming from scratch.

NOTICE

SLC is only active in auto on mode, not hand-on mode.

3.14.1 13-0* SLC Settings

Use the SLC settings to activate, deactivate, and reset the smart logic control sequence. The logic functions and comparators are always running in the background, which opens for separate control of digital inputs and outputs.

13-00 SL Controller Mode

Option: Function:

| | | |
|-----|-----|--------------------------------------|
| [0] | Off | Disables the smart logic controller. |
| [1] | On | Enables the smart logic controller. |

13-01 Start Event

Select the boolean (true or false) input to activate smart logic control.

Option: Function:

| | | |
|-----|----------|--|
| [0] | False | Select the boolean (true or false) input to activate smart logic control. Enters the fixed value - false. |
| [1] | True | Enters the fixed value - true. |
| [2] | Running | The motor runs. |
| [3] | In range | The motor runs within the programmed current and speed ranges set in <i>parameter 4-50 Warning Current Low</i> to <i>parameter 4-53 Warning Speed High</i> . |

| 13-01 Start Event | | |
|-------------------|----------------------|---|
| Option: | Function: | |
| [4] | On reference | The motor runs on reference. |
| [5] | Torque limit | The torque limit set in <i>parameter 4-16 Torque Limit Motor Mode</i> or <i>parameter 4-17 Torque Limit Generator Mode</i> is exceeded. |
| [6] | Current Limit | The motor current limit set in <i>parameter 4-18 Current Limit</i> is exceeded. |
| [7] | Out of current range | The motor current is outside the range set in <i>parameter 4-18 Current Limit</i> . |
| [8] | Below I low | The motor current is lower than set in <i>parameter 4-50 Warning Current Low</i> . |
| [9] | Above I high | The motor current is higher than set in <i>parameter 4-51 Warning Current High</i> . |
| [10] | Out of speed range | The speed is outside the range set in <i>parameter 4-52 Warning Speed Low</i> and <i>parameter 4-53 Warning Speed High</i> . |
| [11] | Below speed low | The output speed is lower than the setting in <i>parameter 4-52 Warning Speed Low</i> . |
| [12] | Above speed high | The output speed is higher than the setting in <i>parameter 4-53 Warning Speed High</i> . |
| [13] | Out of feedb. range | The feedback is outside the range set in <i>parameter 4-56 Warning Feedback Low</i> and <i>parameter 4-57 Warning Feedback High</i> . |
| [14] | Below feedb. low | The feedback is below the limit set in <i>parameter 4-56 Warning Feedback Low</i> . |
| [15] | Above feedb. high | The feedback is above the limit set in <i>parameter 4-57 Warning Feedback High</i> . |
| [16] | Thermal warning | The thermal warning turns on when the temperature exceeds the limit in the motor, the frequency converter, the brake resistor, or the thermistor. |
| [17] | Mains out of range | The mains voltage is outside the specified voltage range. |
| [18] | Reversing | The output is high when the frequency converter is running counterclockwise (the logical product of the status bits "running" AND "reverse"). |
| [19] | Warning | A warning is active. |
| [20] | Alarm (trip) | A (trip) alarm is active. |
| [21] | Alarm (trip lock) | A (trip lock) alarm is active. |
| [22] | Comparator 0 | Use the result of comparator 0. |
| [23] | Comparator 1 | Use the result of comparator 1. |

| 13-01 Start Event | | |
|-------------------|---------------------|--|
| Option: | Function: | |
| [24] | Comparator 2 | Use the result of comparator 2. |
| [25] | Comparator 3 | Use the result of comparator 3. |
| [26] | Logic rule 0 | Use the result of logic rule 0. |
| [27] | Logic rule 1 | Use the result of logic rule 1. |
| [28] | Logic rule 2 | Use the result of logic rule 2. |
| [29] | Logic rule 3 | Use the result of logic rule 3. |
| [33] | Digital input DI18 | Use the result of digital input 18. |
| [34] | Digital input DI19 | Use the result of digital input 19. |
| [35] | Digital input DI27 | Use the result of digital input 27. |
| [36] | Digital input DI29 | Use the result of digital input 29. |
| [37] | Digital input DI32 | Use the result of digital input 32. |
| [38] | Digital input DI33 | Use the result of digital input 33. |
| [39] | Start command | A start command is issued. |
| [40] | Drive stopped | A stop command (jog, stop, quick stop, coast) is issued – and not from the SLC itself. |
| [41] | Reset Trip | A reset is issued. |
| [42] | Auto-reset Trip | An auto reset is performed. |
| [43] | Ok key | [OK] is pressed. Only available on the graphical LCP. |
| [44] | Reset key | [Reset] is pressed. Only available on the graphical LCP. |
| [45] | Left key | [◀] is pressed. Only available on the graphical LCP. |
| [46] | Right key | [▶] is pressed. Only available on the graphical LCP. |
| [47] | Up key | [▲] is pressed. Only available on the graphical LCP. |
| [48] | Down key | [▼] is pressed. Only available on the graphical LCP. |
| [50] | Comparator 4 | Use the result of comparator 4. |
| [51] | Comparator 5 | Use the result of comparator 5. |
| [60] | Logic rule 4 | Use the result of logic rule 4. |
| [61] | Logic rule 5 | Use the result of logic rule 5. |
| [76] | Digital input x30/2 | Use the value of x30/2 (VLT® General Purpose I/O MCB 101). |

| 13-01 Start Event | | |
|---|----------------------|---|
| Select the boolean (true or false) input to activate smart logic control. | | |
| Option: | | Function: |
| [77] | Digital input x30/3 | Use the value of x30/3 (VLT® General Purpose I/O MCB 101). |
| [78] | Digital input x30/4 | Use the value of x30/4 (VLT® General Purpose I/O MCB 101). |
| [79] | Digital input x46/1 | Use the value of x46/1 (VLT® Extended Relay Card MCB 113). |
| [80] | Digital input x46/3 | Use the value of x46/3 (VLT® Extended Relay Card MCB 113). |
| [81] | Digital input x46/5 | Use the value of x46/5 (VLT® Extended Relay Card MCB 113). |
| [82] | Digital input x46/7 | Use the value of x46/7 (VLT® Extended Relay Card MCB 113). |
| [83] | Digital input x46/9 | Use the value of x46/9 (VLT® Extended Relay Card MCB 113). |
| [84] | Digital input x46/11 | Use the value of x46/11 (VLT® Extended Relay Card MCB 113). |
| [85] | Digital input x46/13 | Use the value of x46/13 (VLT® Extended Relay Card MCB 113). |
| [94] | RS Flipflop 0 | See chapter 3.14.2 13-1* Comparators. |
| [95] | RS Flipflop 1 | See chapter 3.14.2 13-1* Comparators. |
| [96] | RS Flipflop 2 | See chapter 3.14.2 13-1* Comparators. |
| [97] | RS Flipflop 3 | See chapter 3.14.2 13-1* Comparators. |
| [98] | RS Flipflop 4 | See chapter 3.14.2 13-1* Comparators. |

| [101] | RS Flipflop 7 | See chapter 3.14.2 13-1* Comparators. |
| 13-02 Stop Event | | |
| Select the boolean (true or false) input to deactivate smart logic control. | | |
| Option: | | Function: |
| [0] | False | For descriptions of options [0] False–[61] Logic rule 5, see parameter 13-01 Start Event. |
| [1] | True | |
| [2] | Running | |
| [3] | In range | |
| [4] | On reference | |
| [5] | Torque limit | |
| [6] | Current Limit | |
| [7] | Out of current range | |
| [8] | Below I low | |
| [9] | Above I high | |
| [10] | Out of speed range | |

| 13-02 Stop Event | | |
|---|---------------------|--|
| Select the boolean (true or false) input to deactivate smart logic control. | | |
| Option: | | Function: |
| [11] | Below speed low | |
| [12] | Above speed high | |
| [13] | Out of feedb. range | |
| [14] | Below feedb. low | |
| [15] | Above feedb. high | |
| [16] | Thermal warning | |
| [17] | Mains out of range | |
| [18] | Reversing | |
| [19] | Warning | |
| [20] | Alarm (trip) | |
| [21] | Alarm (trip lock) | |
| [22] | Comparator 0 | |
| [23] | Comparator 1 | |
| [24] | Comparator 2 | |
| [25] | Comparator 3 | |
| [26] | Logic rule 0 | |
| [27] | Logic rule 1 | |

| 13-03 Reset SLC | | |
|------------------------|------------------|--|
| Option: | Function: | |
| [0] * | Do not reset SLC | Retains programmed settings in chapter 3.14 Parameters: 13-** Smart Logic Control. |
| [1] | Reset SLC | Resets all parameters in chapter 3.14 Parameters: 13-** Smart Logic Control to default settings. |

3.14.2 13-1* Comparators

Comparators are used for comparing continuous variables (that is output frequency, output current, analog input, and so on.) to fixed preset values.

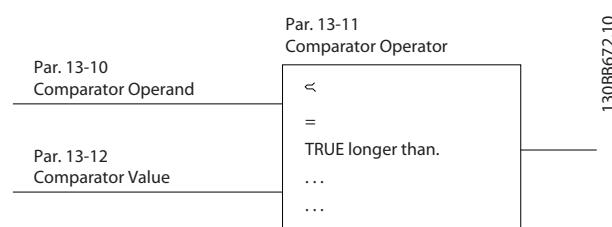

Illustration 3.52 Comparators

There are digital values that are compared to fixed time values. See explanation in *parameter 13-10 Comparator Operand*. Comparators are evaluated once in each scan interval. Use the result (true or false) directly. All parameters in this parameter group are array parameters with index 0–5. Select index 0 to program comparator 0, select index 1 to program comparator 1, and so on.

| 13-10 Comparator Operand | | |
|--------------------------|--|---|
| Option: | Function: | |
| | Options [1] Reference % to [31] Counter B are variables which are compared based on their values. Options [50] FALSE to [186] Drive in auto mode are digital values (true/false) where the comparison is based on the amount of time during which they are set to true or false. See <i>parameter 13-11 Comparator Operator</i> . Select the variable to be monitored by the comparator. | |
| [0] | DISABLED | The comparator is disabled. |
| [1] | Reference % | The resulting remote reference in percent. |
| [2] | Feedback % | [RPM] or [Hz], as set in <i>parameter 0-02 Motor Speed Unit</i> . |
| [3] | Motor speed | [RPM] or [Hz], as set in <i>parameter 0-02 Motor Speed Unit</i> . |
| [4] | Motor Current | |
| [5] | Motor torque | |
| [6] | Motor power | |
| [7] | Motor voltage | |
| [8] | DC-link voltage | |
| [9] | Motor Thermal | Value is in percent. |
| [10] | Drive thermal | Value is in percent. |
| [11] | Heat sink temp. | Value is in percent. |
| [12] | Analog input AI53 | Value is in percent. |

| 13-10 Comparator Operand | | |
|--------------------------|---------------------|--|
| Option: | Function: | |
| [13] | Analog input AI54 | Value is in percent. |
| [14] | Analog input AIFB10 | AIFB10 is internal 10 V supply. |
| [15] | Analog input AIS24V | AIS24V is a 24 V switch mode power supply. |
| [17] | Analog input AICCT | Value is in [°]. AICCT is control card temperature. |
| [18] | Pulse input FI29 | Value is in percent. |
| [19] | Pulse input FI33 | Value is in percent. |
| [20] | Alarm number | The number of registered alarms. |
| [21] | Warning number | |
| [22] | Analog input x30 11 | |
| [23] | Analog input x30 12 | |
| [26] | Actual Position | The actual position in position units defined in <i>parameter group 17-7* Position Scaling</i> . |
| [30] | Counter A | |
| [31] | Counter B | |
| [34] | Analog Input x48/2 | |
| [35] | Temp Input x48/4 | |
| [36] | Temp Input x48/7 | |
| [37] | Temp Input x48/10 | |
| [50] | FALSE | Use to enter the fixed value of false in the comparator. |
| [51] | TRUE | Use to enter the fixed value of true in the comparator. |
| [52] | Control ready | Use to enter the control board receives supply voltage. |
| [53] | Drive ready | The frequency converter is ready for operation and applies a signal on the control board. |
| [54] | Running | The motor runs. |
| [55] | Reversing | The output is active when the frequency converter runs counterclockwise (the logical product of the status bits running AND reverse). |
| [56] | In range | The motor runs within the programmed current and speed ranges set in <i>parameter 4-50 Warning Current Low</i> to <i>parameter 4-53 Warning Speed High</i> . |
| [60] | On reference | The motor runs on reference. |

| 13-10 Comparator Operand | | |
|--------------------------|-----------------------|---|
| Option: | Function: | |
| [61] | Below reference, low | The motor runs at a reference which is less than the value in <i>parameter 4-54 Warning Reference Low</i> . |
| [62] | Above ref, high | The motor runs at a reference which exceeds the value in <i>parameter 4-55 Warning Reference High</i> . |
| [65] | Torque limit | The torque exceeds the value in <i>parameter 4-16 Torque Limit Motor Mode</i> or <i>parameter 4-17 Torque Limit Generator Mode</i> . |
| [66] | Current Limit | The motor current exceeds the value in <i>parameter 4-18 Current Limit</i> . |
| [67] | Out of current range | The motor current is outside the range set in <i>parameter 4-18 Current Limit</i> . |
| [68] | Below I low | The motor current is lower than the value in <i>parameter 4-50 Warning Current Low</i> . |
| [69] | Above I high | The motor current is higher than the value in <i>parameter 4-51 Warning Current High</i> . |
| [70] | Out of speed range | The speed is outside the range set in <i>parameter 4-52 Warning Speed Low</i> and <i>parameter 4-53 Warning Speed High</i> . |
| [71] | Below speed low | The output speed is lower than the value in <i>parameter 4-52 Warning Speed Low</i> . |
| [72] | Above speed high | The output speed is higher than the value in <i>parameter 4-53 Warning Speed High</i> . |
| [75] | Out of feedback range | The feedback is outside the range set in <i>parameter 4-56 Warning Feedback Low</i> and <i>parameter 4-57 Warning Feedback High</i> . |
| [76] | Below feedback low | The feedback is lower than the limit set in <i>parameter 4-56 Warning Feedback Low</i> . |
| [77] | Above feedback high | The feedback exceeds the limit set in <i>parameter 4-57 Warning Feedback High</i> . |
| [80] | Thermal warning | This operand becomes true when the frequency converter detects any thermal warning, for instance when the temperature exceeds the limit in the motor, the frequency converter, the brake resistor, or thermistor. |
| [82] | Mains out of range | The mains voltage is outside the specified voltage range. |
| [85] | Warning | If a warning is triggered, this operand gets the warning number. |
| [86] | Alarm (trip) | A trip alarm is active. |

| 13-10 Comparator Operand | | |
|--------------------------|---------------------|--|
| Option: | Function: | |
| [87] | Alarm (trip lock) | A trip lock alarm is active. |
| [90] | Bus OK | Active communication (no timeout) via the serial communication port. |
| [91] | Torque limit & stop | If the frequency converter has received a stop signal and is at the torque limit, the signal is logic 0. |
| [92] | Brake fault (IGBT) | The brake IGBT is short-circuited. |
| [93] | Mech. brake control | The mechanical brake is active. |
| [94] | Safe stop active | |
| [100] | Comparator 0 | The result of comparator 0. |
| [101] | Comparator 1 | The result of comparator 1. |
| [102] | Comparator 2 | The result of comparator 2. |
| [103] | Comparator 3 | The result of comparator 3. |
| [104] | Comparator 4 | The result of comparator 4. |
| [105] | Comparator 5 | The result of comparator 5. |
| [110] | Logic rule 0 | The result of logic rule 0. |
| [111] | Logic rule 1 | The result of logic rule 1. |
| [112] | Logic rule 2 | The result of logic rule 2. |
| [113] | Logic rule 3 | The result of logic rule 3. |
| [114] | Logic rule 4 | The result of logic rule 4. |
| [115] | Logic rule 5 | The result of logic rule 5. |
| [120] | SL Time-out 0 | The result of SLC timer 0. |
| [121] | SL Time-out 1 | The result of SLC timer 1. |
| [122] | SL Time-out 2 | The result of SLC timer 2. |
| [123] | SL Time-out 3 | The result of SLC timer 3. |
| [124] | SL Time-out 4 | The result of SLC timer 4. |
| [125] | SL Time-out 5 | The result of SLC timer 5. |
| [126] | SL Time-out 6 | The result of SLC timer 6. |
| [127] | SL Time-out 7 | The result of SLC timer 7. |
| [130] | Digital input DI18 | Digital input 18 (high=true). |
| [131] | Digital input DI19 | Digital input 19 (high=true). |
| [132] | Digital input DI27 | Digital input 27 (high=true). |
| [133] | Digital input DI29 | Digital input 29 (high=true). |
| [134] | Digital input DI32 | Digital input 32 (high=true). |
| [135] | Digital input DI33 | Digital input 33 (high=true). |
| [150] | SL digital output A | Use the result of the SLC output A. |

| 13-10 Comparator Operand | | |
|--------------------------|-------------------------|--|
| Option: | Function: | |
| [151] | SL digital output B | Use the result of the SLC output B. |
| [152] | SL digital output C | Use the result of the SLC output C. |
| [153] | SL digital output D | Use the result of the SLC output D. |
| [154] | SL digital output E | Use the result of the SLC output E. |
| [155] | SL digital output F | Use the result of the SLC output F. |
| [160] | Relay 1 | Relay 1 is active. |
| [161] | Relay 2 | Relay 2 is active. |
| [162] | Relay 3 | |
| [163] | Relay 4 | |
| [164] | Relay 5 | |
| [165] | Relay 6 | |
| [166] | Relay 7 | |
| [167] | Relay 8 | |
| [168] | Relay 9 | |
| [180] | Local reference active | Active when parameter 3-13 Reference Site is [2] Local or when parameter 3-13 Reference Site is [0] Linked to hand Auto, at the same time as the LCP is in hand on mode. |
| [181] | Remote reference active | Active when parameter 3-13 Reference Site is [1] Remote or [0] Linked to hand/auto, while the LCP is in auto on mode. |
| [182] | Start command | Active when there is an active start command, and no stop command. |
| [183] | Drive stopped | A stop command (jog, stop, qstop, coast) is issued – and not from the SLC itself. |
| [185] | Drive in hand mode | Active when the frequency converter is in hand on mode. |
| [186] | Drive in auto mode | Active when the frequency converter is in auto mode. |
| [187] | Start command given | |
| [190] | Digital input x30/2 | |
| [191] | Digital input x30/3 | |
| [192] | Digital input x30/4 | |
| [193] | Digital input x46/1 | |
| [194] | Digital input x46/3 | |
| [195] | Digital input x46/5 | |
| [196] | Digital input x46/7 | |

| 13-10 Comparator Operand | | |
|---------------------------|----------------------|--|
| Option: | Function: | |
| [197] | Digital input x46/9 | |
| [198] | Digital input x46/11 | |
| [199] | Digital input x46/13 | |
| 13-11 Comparator Operator | | |
| Option: | Function: | |
| | | Select the operator to be used in the comparison. This is an array parameter containing comparator operators 0–5. |
| [0] | < | The result of the evaluation is true, when the variable selected in parameter 13-10 Comparator Operand is smaller than the fixed value in parameter 13-12 Comparator Value. The result is false, if the variable selected in parameter 13-10 Comparator Operand is greater than the fixed value in parameter 13-12 Comparator Value. |
| [1] | ≈ (equal) | The result of the evaluation is true, when the variable selected in parameter 13-10 Comparator Operand is approximately equal to the fixed value in parameter 13-12 Comparator Value. |
| [2] | > | Inverse logic of option [0] <. |
| [5] | TRUE longer than.. | |
| [6] | FALSE longer than.. | |
| [7] | TRUE shorter than.. | |
| [8] | FALSE shorter than.. | |
| 13-12 Comparator Value | | |
| Array [6] | | |
| Range: | | Function: |
| Size related* | [-100000 - 100000] | Enter the trigger level for the variable that is monitored by this comparator. This is an array parameter containing comparator values 0–5. |

3.14.3 RS Flip Flops

The reset/set flip flops hold the signal until set/reset.

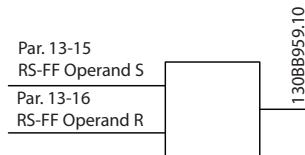

Illustration 3.53 Reset/Set Flip Flops

2 parameters are used and the output can be used in the logic rules and as events.

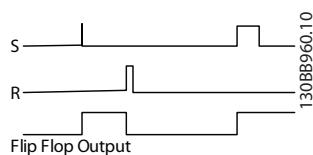

Illustration 3.54 Flip Flop Outputs

The 2 operators can be selected from a long list. As a special case, the same digital input can be used as both Set and Reset, making it possible to use the same digital input as start/stop. The following settings can be used to set up the same digital input as start/stop (example given with DI32 but is not a requirement).

| Parameter | Setting | Notes |
|---|-------------------------|--|
| Parameter 13-00 SL Controller Mode | On | – |
| Parameter 13-01 Start Event | True | – |
| Parameter 13-02 Stop Event | False | – |
| Parameter 13-40 Logic Rule Boolean 1 [0] | [37] Digital Input DI32 | – |
| Parameter 13-42 Logic Rule Boolean 2 [0] | [2] Running | – |
| Parameter 13-41 Logic Rule Operator 1 [0] | [3] AND NOT | – |
| Parameter 13-40 Logic Rule Boolean 1 [1] | [37] Digital Input DI32 | – |
| Parameter 13-42 Logic Rule Boolean 2 [1] | [2] Running | – |
| Parameter 13-41 Logic Rule Operator 1 [1] | [1] AND | – |
| Parameter 13-15 RS-FF Operand S [0] | [26] Logic rule 0 | Output from parameter 13-41 Logic Rule Operator 1 [0]. |

| Parameter | Setting | Notes |
|--|--------------------|--|
| Parameter 13-16 RS-FF Operand R [0] | [27] Logic rule 1 | Output from parameter 13-41 Logic Rule Operator 1 [1]. |
| Parameter 13-51 SL Controller Event [0] | [94] RS Flipflop 0 | Output from parameter 13-15 RS-FF Operand S and parameter 13-16 RS-FF Operand R. |
| Parameter 13-52 SL Controller Action [0] | [22] Run | – |
| Parameter 13-51 SL Controller Event [1] | [27] Logic rule 1 | – |
| Parameter 13-52 SL Controller Action [1] | [24] Stop | – |

3.14.4 13-2* Timers

Use the result (true or false) from timers directly to define an event (see *parameter 13-51 SL Controller Event*), or as boolean input in a logic rule (see *parameter 13-40 Logic Rule Boolean 1*, *parameter 13-42 Logic Rule Boolean 2*, or *parameter 13-44 Logic Rule Boolean 3*). A timer is only false when started by an action (for example [29] *Start timer 1*) until the timer value entered in this parameter has elapsed. Then it becomes true again.

All parameters in this parameter group are array parameters with index 0-2. Select index 0 to program timer 0, select index 1 to program timer 1, and so on.

| 13-20 SL Controller Timer | | |
|---------------------------|-----------|--|
| Range: | Function: | |
| Size related* | [0 - 0] | Enter the value to define the duration of the false output from the programmed timer. A timer is only false if it is started by an action (that is, [29] <i>Start timer 1</i>) and until the given timer value has elapsed. |

3.14.5 13-4* Logic Rules

Combine up to 3 boolean inputs (true/false inputs) from timers, comparators, digital inputs, status bits, and events using the logical operators AND, OR, and NOT. Select boolean inputs for the calculation in *parameter 13-40 Logic Rule Boolean 1*, *parameter 13-42 Logic Rule Boolean 2*, and

parameter 13-44 Logic Rule Boolean 3. Define the operators used to logically combine the selected inputs in *parameter 13-41 Logic Rule Operator 1* and *parameter 13-43 Logic Rule Operator 2*.

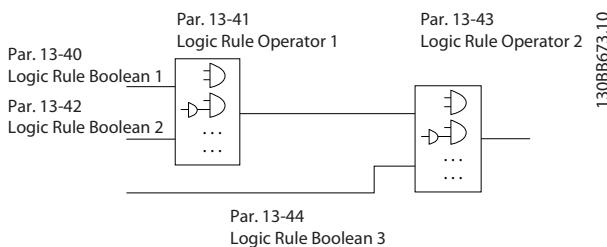

Illustration 3.55 Logic Rules

Priority of calculation

The results of *parameter 13-40 Logic Rule Boolean 1*, *parameter 13-41 Logic Rule Operator 1*, and *parameter 13-42 Logic Rule Boolean 2* are calculated 1st. The outcome (true/false) of this calculation is combined with the settings of *parameter 13-43 Logic Rule Operator 2* and *parameter 13-44 Logic Rule Boolean 3*, yielding the final result (true/false) of the logic rule.

| 13-40 Logic Rule Boolean 1 | | |
|----------------------------|----------------------|---|
| Option: | Function: | |
| [0] | False | Select the first boolean (true or false) input for the selected logic rule. See <i>parameter 13-01 Start Event</i> and <i>parameter 13-02 Stop Event</i> for more information. |

| 13-52 SL Controller Action | | |
|----------------------------|--|--|
| Option: | Function: | |
| | Select the action corresponding to the SLC event. Actions are executed when the corresponding event (defined in parameter 13-51 SL Controller Event) is evaluated as true. | |
| [0] | DISABLED | |
| [1] | No action | |
| [2] | Select set-up 1 | Changes the active set-up (<i>parameter 0-10 Active Set-up</i>) to 1. If the set-up is changed, it merges with other set-up commands coming from either the digital inputs or via a fieldbus. |
| [3] | Select set-up 2 | Changes the active set-up (<i>parameter 0-10 Active Set-up</i>) to 2. If the set-up is changed, it merges with other set-up commands coming from either the digital inputs or via a fieldbus. |
| [4] | Select set-up 3 | Changes the active set-up (<i>parameter 0-10 Active Set-up</i>) to 3. |

| 13-52 SL Controller Action | | |
|----------------------------|---------------------|--|
| Option: | Function: | |
| | Select set-up 4 | If the set-up is changed, it merges with other set-up commands coming from either the digital inputs or via a fieldbus. |
| [5] | Select preset ref 0 | Changes the active set-up (<i>parameter 0-10 Active Set-up</i>) to 4. If the set-up is changed, it merges with other set-up commands coming from either the digital inputs or via a fieldbus. |
| [10] | Select preset ref 1 | Selects preset reference 0. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [11] | Select preset ref 2 | Selects preset reference 1. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [12] | Select preset ref 3 | Selects preset reference 2. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [13] | Select preset ref 4 | Selects preset reference 3. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [14] | Select preset ref 5 | Selects preset reference 4. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [15] | Select preset ref 6 | Selects preset reference 5. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [16] | Select preset ref 7 | Selects preset reference 6. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [17] | Select ramp 1 | Selects preset reference 7. If the active preset reference is changed, it merges with other preset reference commands coming from either the digital inputs or via a fieldbus. |
| [18] | Select ramp 2 | Selects ramp 1. |
| [19] | Select ramp 3 | Selects ramp 2. |

| 13-52 SL Controller Action | |
|----------------------------|--|
| Option: | Function: |
| [20] | Select ramp 3 Selects ramp 3. |
| [21] | Select ramp 4 Selects ramp 4. |
| [22] | Run Issues a start command to the frequency converter. |
| [23] | Run reverse Issues a start reverse command to the frequency converter. |
| [24] | Stop Issues a stop command to the frequency converter. |
| [25] | Qstop Issues a quick stop command to the frequency converter. |
| [26] | Dcstop Issues a DC stop command to the frequency converter. |
| [27] | Coast The frequency converter coasts immediately. All stop commands including the coast command stop the SLC. |
| [28] | Freeze output Freezes the output frequency of the frequency converter. |
| [29] | Start timer 0 Starts timer 0, see <i>parameter 13-20 SL Controller Timer</i> for further description. |
| [30] | Start timer 1 Starts timer 1, see <i>parameter 13-20 SL Controller Timer</i> for further description. |
| [31] | Start timer 2 Starts timer 2, see <i>parameter 13-20 SL Controller Timer</i> for further description. |
| [32] | Set digital out A low Any output with smart logic output A is low. |
| [33] | Set digital out B low Any output with smart logic output B is low. |
| [34] | Set digital out C low Any output with smart logic output C is low. |
| [35] | Set digital out D low Any output with smart logic output D is low. |
| [36] | Set digital out E low Any output with smart logic output E is low. |
| [37] | Set digital out F low Any output with smart logic output F is low. |
| [38] | Set digital out A high Any output with smart logic output A is high. |
| [39] | Set digital out B high Any output with smart logic output B is high. |
| [40] | Set digital out C high Any output with smart logic output C is high. |
| [41] | Set digital out D high Any output with smart logic output D is high. |
| [42] | Set digital out E high Any output with smart logic output E is high. |

| 13-52 SL Controller Action | |
|----------------------------|---|
| Option: | Function: |
| [43] | Set digital out F high Any output with smart logic output F is high. |
| [60] | Reset Counter A Resets counter A to 0. |
| [61] | Reset Counter B Resets counter B to 0. |
| [70] | Start timer 3 Start timer 3, see <i>parameter 13-20 SL Controller Timer</i> for further description. |
| [71] | Start timer 4 Start timer 4, see <i>parameter 13-20 SL Controller Timer</i> for further description. |

| [73] | Start timer 6 Start timer 6, see <i>parameter 13-20 SL Controller Timer</i> for further description. |
| [74] | Start timer 7 Start timer 7, see <i>parameter 13-20 SL Controller Timer</i> for further description. |

3.15 Parameters: 14-** Special Functions

3.15.1 14-0* Inverter Switching

| 14-00 Switching Pattern | | |
|-------------------------|---|--|
| Option: | Function: | |
| | Select the switching pattern: 60° AVM or SFAVM. | |
| NOTICE | The frequency converter may adjust the switching pattern automatically to avoid a trip. | |
| [0] | 60 AVM | |
| [1] * | SFAVM | |

| 14-01 Switching Frequency | | |
|---------------------------|--|---|
| Option: | Function: | |
| | NOTICE The output frequency value of the frequency converter must never exceed 10% of the switching frequency. When the motor runs, adjust the switching frequency in parameter 14-01 Switching Frequency to minimise motor noise. | |
| | NOTICE To avoid a trip, the frequency converter can adjust the switching frequency automatically. | |
| [0] | 1.0 kHz | |
| [1] | 1.5 kHz | Default switching frequency for 355–1200 kW [500–1600 hp], 690 V. |
| [2] | 2.0 kHz | Default switching frequency for 250–800 kW [350–1075 hp], 400 V, and 37–315 kW [50–450 hp], 690 V. |
| [3] | 2.5 kHz | |
| [4] | 3.0 kHz | Default switching frequency for 18.5–37 kW [25–50 hp], 200 V, and 37–200 kW [50–300 hp], 400 V. |
| [5] | 3.5 kHz | |
| [6] | 4.0 kHz | Default switching frequency for 5.5–15 kW [7.5–20 hp], 200 V, and 11–30 kW [15–40], 400 V. |
| [7] | 5.0 kHz | Default switching frequency for 0.25–3.7 kW [0.34–5 hp], 200 V, and 0.37–7.5 kW [0.5–10 hp], 400 V. |
| [8] | 6.0 kHz | |
| [9] | 7.0 kHz | |
| [10] | 8.0 kHz | |
| [11] | 10.0 kHz | |

14-01 Switching Frequency

Select the frequency converter switching frequency. Changing the switching frequency reduces acoustic noise from the motor. Default values depend on power size.

Option: Function:

| | | |
|------|----------|--|
| [12] | 12.0kHz | |
| [13] | 14.0 kHz | |
| [14] | 16.0kHz | |

14-03 Overmodulation

Option: Function:

| | | |
|-------|-----|---|
| [0] | Off | Select [0] Off for no overmodulation of the output voltage to avoid torque ripple on the motor shaft. This feature may be useful for applications such as grinding machines. |
| [1] * | On | Select [1] On to enable the overmodulation function for the output voltage. This is the right option when it is required that the output voltage is higher than 95% of the input voltage (typically when running oversynchronously). The output voltage is increased according to the degree of overmodulation. |

NOTICE

Overmodulation leads to increased torque ripple as harmonics increase.

Control in flux control principle provides an output current of up to 98% of the input current, regardless of parameter 14-03 Overmodulation.

14-04 PWM Random

Option: Function:

| | | |
|-------|-----|---|
| [0] * | Off | No change of the acoustic motor switching noise. |
| [1] | On | Select to reduce the acoustic noise from the motor. |

14-06 Dead Time Compensation

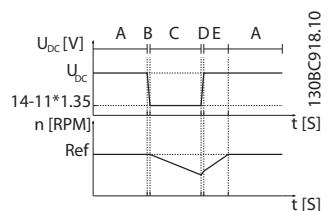

Option: Function:

| | | |
|-------|-----|-----------------------------------|
| [0] | Off | No compensation. |
| [1] * | On | Activates dead-time compensation. |

3.15.2 14-1* Mains On/Off

Parameters for configuring mains failure monitoring and handling. If a mains failure appears, the frequency converter tries to continue in a controlled way until the power in the DC link is exhausted.

| 14-10 Mains Failure | | 14-10 Mains Failure | |
|--|---|--|--|
| Options [1] Ctrl. ramp-down, [2] Ctrl. ramp-down, trip, [5] Kinetic back-up, trip, [7] Kin. back-up, trip w recovery are not active when the option [2] Torque is selected in parameter 1-00 Configuration Mode. | | Options [1] Ctrl. ramp-down, [2] Ctrl. ramp-down, trip, [5] Kinetic back-up, trip, [7] Kin. back-up, trip w recovery are not active when the option [2] Torque is selected in parameter 1-00 Configuration Mode. | |
| Option: | Function: | Option: | Function: |
| | <p>NOTICE</p> <p>Parameter 14-10 Mains Failure cannot be changed while motor runs.</p> <p>Parameter 14-10 Mains Failure is typically used where very short mains interruptions (voltage dips) are present. At 100% load and a short voltage interruption, the DC voltage on the main capacitors drops quickly. For larger frequency converters, it only takes a few milliseconds before the DC level drops to about 373 V DC, and the IGBTs cut off and lose the control of the motor. When mains is restored, and the IGBTs start again, the output frequency and voltage vector do not correspond to the speed/frequency of the motor, and the result is normally an overvoltage or overcurrent, mostly resulting in a trip lock. Parameter 14-10 Mains Failure can be programmed to avoid this situation.</p> <p>Select the function according to which the frequency converter must act when the threshold in parameter 14-11 Mains Voltage at Mains Fault is reached.</p> | | <p>before the motor is ramped to 0, the motor is coasted.</p> <p>Limitation: See the introduction text in parameter 14-10 Mains Failure.</p> |
| [0] * No function | The frequency converter does not compensate for a mains interruption. The voltage on the DC link drops quickly and motor control is lost within milliseconds to seconds. Trip lock is the result. | [2] Ctrl. ramp- down, trip | The functionality is the same as in option [1] Ctrl. ramp-down, except in this option a reset is necessary for starting up after power-up. |
| [1] | Control of the motor remains with the frequency converter, and the frequency converter performs a controlled ramp down from parameter 14-11 Mains Voltage at Mains Fault level. If parameter 2-10 Brake Function is [0] Off or [2] AC brake, the ramp follows the overvoltage ramping. If parameter 2-10 Brake Function is [1] Resistor Brake, the ramp follows the setting in parameter 3-81 Quick Stop Ramp Time. This selection is useful in pump applications, where the inertia is low and the friction is high. When mains is restored, the output frequency ramps the motor up to the reference speed (if the mains interruption is prolonged, the controlled ramp down may bring the output frequency down to 0 RPM, and when the mains is restored, the application is ramped up from 0 RPM to the previous reference speed via the normal ramp up). If the energy in the DC link disappears | [3] Coasting | Centrifuges can run for 1 hour without supply. In those situations, it is possible to select a coast function at mains interruption, together with a flying start, which occurs when the mains is restored. |
| | | [4] Kinetic back-up | Kinetic back-up ensures that the frequency converter keeps running as long as there is energy in the system due to the inertia from motor and load. This is done by converting the mechanical energy to the DC link and maintaining control of the frequency converter and motor. This can extend the controlled operation, depending on the inertia in the system. For fans, it is typically several seconds; for pumps up to 2 seconds; and for compressors only for a fraction of s. Many industry applications can extend controlled operation for many s, which is often enough time for the mains to return. |

| | |
|---|---------------------------|
| A | Normal operation |
| B | Mains failure |
| C | Kinetic back-up |
| D | Mains return |
| E | Normal operation: ramping |

Illustration 3.56 Kinetic Back-up

The DC level during [4] Kinetic back-up equals to parameter 14-11 Mains Voltage at Mains Fault * 1.35. If the mains does not return, U_{DC} is maintained as long as possible by ramping the speed down

14-10 Mains Failure

Options [1] *Ctrl. ramp-down*, [2] *Ctrl. ramp-down, trip*, [5] *Kinetic back-up, trip*, [7] *Kin. back-up, trip w recovery* are not active when the option [2] *Torque* is selected in parameter 1-00 Configuration Mode.

Option: **Function:**

| | |
|-----|---|
| | <p>towards 0 RPM. Finally, the frequency converter coasts.</p> <p>If the mains returns while in kinetic back-up mode, U_{DC} increases above <i>parameter 14-11 Mains Voltage at Mains Faultx1.35</i>. This is detected in 1 of the following ways.</p> <ul style="list-style-type: none"> • If $U_{DC} > \text{parameter 14-11 Mains Voltage at Mains Faultx1.35} \times 1.05$. • If the speed is above the reference. This is relevant if the mains comes back at a lower level than before, for example, <i>parameter 14-11 Mains Voltage at Mains Faultx1.35x1.02</i>. This does not fulfil the criterion in point 1, and the frequency converter tries to reduce U_{DC} to <i>parameter 14-11 Mains Voltage at Mains Faultx1.35</i> by increasing the speed. This cannot be done as the mains cannot be lowered. • If running mechanically. The same mechanism as in point 2 applies, but the inertia prevents the speed from going above the reference speed. This leads to the motor running mechanically until the speed is above the reference speed and the situation in point 2 occurs. Instead of waiting for that criterion, point 3 is introduced. |
| [5] | <p>Kinetic back-up, trip</p> <p>The difference between kinetic back-up with and without trip is that the latter always ramps down to 0 RPM and trips, regardless of whether mains returns or not.</p> <p>The function does not detect if mains returns. This is the reason for the relatively high level on the DC link during ramp down.</p> |

14-10 Mains Failure

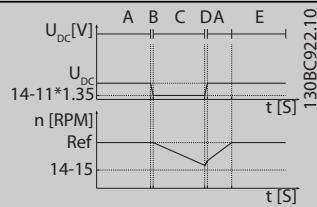

Options [1] *Ctrl. ramp-down*, [2] *Ctrl. ramp-down, trip*, [5] *Kinetic back-up, trip*, [7] *Kin. back-up, trip w recovery* are not active when the option [2] *Torque* is selected in parameter 1-00 Configuration Mode.

Option: **Function:**

| | | | | | | | | | | |
|-----|--------------------------------------|--|---|------------------|---|---------------|---|-----------------|---|------|
| | | <table border="1"> <tr> <td>A</td> <td>Normal operation</td> </tr> <tr> <td>B</td> <td>Mains failure</td> </tr> <tr> <td>C</td> <td>Kinetic back-up</td> </tr> <tr> <td>D</td> <td>Trip</td> </tr> </table> <p>Illustration 3.57 Kinetic Back-up Trip</p> | A | Normal operation | B | Mains failure | C | Kinetic back-up | D | Trip |
| A | Normal operation | | | | | | | | | |
| B | Mains failure | | | | | | | | | |
| C | Kinetic back-up | | | | | | | | | |
| D | Trip | | | | | | | | | |
| [6] | Alarm | | | | | | | | | |
| [7] | Kin. back-up, trip w recovery | <p>Kinetic back-up with recovery combines the features of kinetic back-up and kinetic back-up with trip. This feature makes it possible to select between kinetic back-up and kinetic back-up with trip, based on a recovery speed, configurable in <i>parameter 14-15 Kin. Backup Trip Recovery Level</i>. If mains does not return, the frequency converter ramps down to 0 RPM and trips. If mains returns while in kinetic back-up at a speed above the value in <i>parameter 14-15 Kin. Backup Trip Recovery Level</i>, normal operation is resumed. This is equal to [4] <i>Kinetic Back-up</i>. The DC level during [7] <i>Kinetic back-up</i> is <i>parameter 14-11 Mains Voltage at Mains Faultx1.35</i>.</p> | | | | | | | | |

14-10 Mains Failure

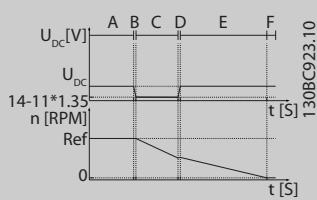

Options [1] Ctrl. ramp-down, [2] Ctrl. ramp-down, trip, [5] Kinetic back-up, trip, [7] Kin. back-up, trip w recovery are not active when the option [2] Torque is selected in parameter 1-00 Configuration Mode.

Option: **Function:**

| | |
|---|----------------------------|
| A | Normal operation. |
| B | Mains failure. |
| C | Kinetic back-up. |
| D | Mains return. |
| E | Normal operation: ramping. |

Illustration 3.58 Kinetic Back-Up, Trip with Recovery where Mains Returns above Parameter 14-15 Kin. Backup Trip Recovery Level

If mains return while in kinetic back-up at a speed below parameter 14-15 Kin. Backup Trip Recovery Level, the frequency converter ramps down to 0 RPM using the ramp and then trips. If the ramp is slower than the system ramping down on its own, the ramping is done mechanically and U_{DC} is at the normal level (U_{DC}, m×1.35).

| | |
|---|-----------------------------------|
| A | Normal operation. |
| B | Mains failure. |
| C | Kinetic back-up. |
| D | Mains return. |
| E | Kinetic back-up, ramping to trip. |
| F | Trip. |

Illustration 3.59 Kinetic Back-Up, Trip with Recovery, Trip Slow Ramp where Mains Returns below Parameter 14-15 Kin. Backup Trip Recovery Level, in this Illustration a Slow Ramp is Used

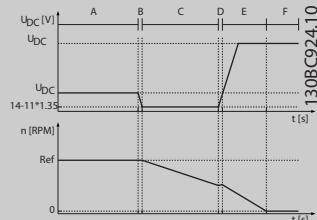

If the ramp is quicker than the ramp down speed of the application, the ramping generates

14-10 Mains Failure

Options [1] Ctrl. ramp-down, [2] Ctrl. ramp-down, trip, [5] Kinetic back-up, trip, [7] Kin. back-up, trip w recovery are not active when the option [2] Torque is selected in parameter 1-00 Configuration Mode.

Option: **Function:**

current. This results in a higher U_{DC} which is limited using the brake chopper/resistor brake.

| | |
|---|----------------------------------|
| A | Normal operation. |
| B | Mains failure. |
| C | Kinetic back-up. |
| D | Mains return. |
| E | Kinetic back-up ramping to trip. |
| F | Trip. |

Illustration 3.60 Kinetic Back-Up, Trip with Recovery where Mains Returns below Parameter 14-15 Kin. Backup Trip Recovery Level, in this Illustration a Quick Ramp is Used

14-11 Mains Voltage at Mains Fault**Range:** **Function:**

Size related* [180 - 600 V] This parameter defines the threshold voltage at which the function in parameter 14-10 Mains Failure is activated. Select the detection level depending on the supply quality. For a supply of 380 V, set parameter 14-11 Mains Voltage at Mains Fault to 342 V. This results in a DC detection level of 462 V (parameter 14-11 Mains Voltage at Mains Fault×1.35).

NOTICE

Converting from VLT 5000 to FC 300: Even though the setting of the mains voltage at mains fault is the same for VLT 5000 and FC 300, the detection level is different. Use the following formula to obtain the same detection level as in VLT 5000:

Parameter 14-11 Mains Voltage at Mains Fault (VLT 5000 level) = value used in VLT 5000 * 1.35/sqrt(2).

| 14-12 Function at Mains Imbalance | | |
|--|---|--|
| Operation under severe main imbalance conditions reduces the lifetime of the motor. Conditions are considered severe if the motor is operated continuously near nominal load (for example, a pump or a fan running near full speed). | | |
| Option: | | Function: |
| [0] * | Trip | Trips the frequency converter. |
| [1] | Warning | Issues a warning. |
| [2] | Disabled | No action. |
| Range: | | |
| 1.0 N/A* | [0.0 - 5.0 N/A] | Enter the multiplication factor for the frequency step and the voltage step. The steps are calculated based on load. |
| 14-14 Kin. Backup Time Out | | |
| Range: | | Function: |
| 60 s* [0 - 60 s] | This parameter defines the kinetic back-up timeout in flux mode when running on low voltage grids. If the supply voltage does not exceed the value defined in parameter 14-11 Mains Voltage at Mains Fault +5% within the specified time, the frequency converter then automatically runs a controlled ramp-down profile before stop. | |
| 14-15 Kin. Backup Trip Recovery Level | | |
| Range: | | Function: |
| Size related* [0 - 60000.000 ReferenceFeed-backUnit] | This parameter specifies the kinetic back-up trip recovery level. The unit is defined in parameter 0-02 Motor Speed Unit. | |
| 14-16 Kin. Backup Gain | | |
| Range: | | Function: |
| 100 %* [0 - 500 %] | Enter the kinetic back-up gain value in percent. | |

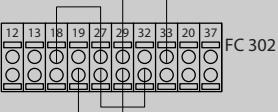

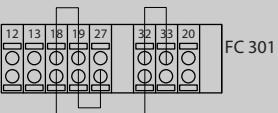

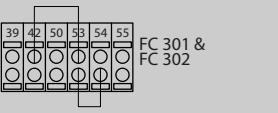

3.15.3 14-2* Trip Reset

Parameters for configuring auto reset handling, special trip handling, and control card self-test or initialization.

| 14-20 Reset Mode | | |
|------------------|--|--|
| Option: | | |
| | Select the reset function after tripping. Once reset, the frequency converter can be restarted. | |
| | NOTICE The motor may start without warning. If the specified number of automatic resets is reached within 10 minutes, the frequency converter enters [0] Manual reset mode. After the manual reset is performed, the setting of parameter 14-20 Reset Mode returns to the original selection. If the number of automatic resets are not reached within 10 minutes, or when a manual reset is performed, the internal automatic reset counter returns to 0. | |
| | NOTICE Automatic reset is also valid for resetting the Safe Torque Off function in firmware version 4.3x or earlier. | |
| [0] * | Manual reset | Select [0] Manual reset to perform a reset via [Reset] or via the digital inputs. |
| [1] | Automatic reset x 1 | Select [1]-[12] Automatic reset x 1...x20 to perform 1–20 automatic resets after tripping. |
| [2] | Automatic reset x 2 | |
| [3] | Automatic reset x 3 | |
| [4] | Automatic reset x 4 | |
| [5] | Automatic reset x 5 | |
| [6] | Automatic reset x 6 | |
| [7] | Automatic reset x 7 | |
| [8] | Automatic reset x 8 | |
| [9] | Automatic reset x 9 | |
| [10] | Automatic reset x 10 | |
| [11] | Automatic reset x 15 | |
| [12] | Automatic reset x 20 | |
| [13] | Infinite auto reset | Select this option for continuous resetting after tripping. |
| [14] | Reset at power-up | |

| 14-21 Automatic Restart Time | |
|------------------------------|---|
| Range: | Function: |
| 10 s* s] | Enter the time interval from trip to start of the automatic reset function. This parameter is active when <i>parameter 14-20 Reset Mode</i> is set to [1]-[13] <i>Automatic reset</i> . |

| 14-22 Operation Mode | |
|----------------------|---|
| Option: | Function: |
| | <p>Use this parameter to specify normal operation; to perform tests; or to initialise all parameters except <i>parameter 15-03 Power Up's</i>, <i>parameter 15-04 Over Temp's</i> and <i>parameter 15-05 Over Volt's</i>. This function is active only when the power is cycled to the frequency converter.</p> <p>Select [0] <i>Normal operation</i> for normal operation of the frequency converter with the motor in the selected application.</p> <p>Select [1] <i>Control card test</i> to test the analog and digital inputs and outputs and the +10 V control voltage. The test requires a test connector with internal connections. Use the following procedure for the control card test:</p> <ol style="list-style-type: none"> 1. Select [1] <i>Control card test</i>. 2. Disconnect the mains supply and wait for the indicator light in the display to go out. 3. Set switches S201 (A53) and S202 (A54) to ON/I. 4. Insert the test plug (see <i>Illustration 3.61</i>). 5. Connect to mains supply. 6. Carry out various tests. 7. The results are showed on the LCP and the frequency converter moves into an infinite loop. 8. <i>Parameter 14-22 Operation Mode</i> is automatically set to normal operation. Carry out a power cycle to start-up in normal operation after a control card test. <p>If the test is OK LCP readout: Control card OK. Disconnect the mains supply and remove the test plug. The green indicator light on the control card lights up.</p> <p>If the test fails LCP readout: Control card I/O failure. Replace the frequency converter or control card. The red indicator light on the control card is turned on. Test plugs (connect the following</p> |

| 14-22 Operation Mode | |
|-----------------------------------|---|
| Option: | Function: |
| | <p>terminals to each other): 18 - 27 - 32; 19 - 29 - 33; 42 - 53 - 54</p>  <p>FC 302 130BA097.12</p>  <p>FC 301</p>  <p>FC 301 & FC 302</p> |
| [0] * | <i>Normal operation</i> |
| [1] | <i>Control card test</i> Remember to set switches S201 (A53) and S202 (A54) as specified in the parameter description when performing a control card test. Otherwise, the test fails. |
| [2] | <i>Initialisation</i> |
| [3] | <i>Boot mode</i> |
| 14-24 Trip Delay at Current Limit | |
| Range: | Function: |
| 60 s* [0 - 60 s] | Enter the current limit trip delay in s. When the output current reaches the current limit (<i>parameter 4-18 Current Limit</i>), a warning is triggered. When the current limit warning has been continuously present for the period specified in this parameter, the frequency converter trips. To run continuously in current limit without tripping, set the parameter to 60 s. Thermal monitoring of the frequency converter remains active. |
| 14-25 Trip Delay at Torque Limit | |
| Range: | Function: |
| 60 s* [0 - 60 s] | Enter the torque limit trip delay in s. When the output torque reaches the torque limits |

| 14-25 Trip Delay at Torque Limit | |
|----------------------------------|--|
| Range: | Function: |
| | (parameter 4-16 Torque Limit Motor Mode and parameter 4-17 Torque Limit Generator Mode), a warning is triggered. When the torque limit warning has been continuously present for the period specified in this parameter, the frequency converter trips. Disable the trip delay by setting the parameter to 60 s. Thermal monitoring of the frequency converter remains active. |

| 14-26 Trip Delay at Inverter Fault | |
|------------------------------------|--|
| Range: | Function: |
| Size related* [0 - 35 s] | When the frequency converter detects an overvoltage in the set time, trip is effected after the set time. If value is 0, protection mode is disabled. NOTICE Disable protection mode in hoisting applications. |

| 14-28 Production Settings | |
|---------------------------|-----------|
| Range: | Function: |
| 0* [No action] | |
| 1 [Service reset] | |
| [2] Set Production Mode | |

| 14-29 Service Code | |
|-------------------------------|------------------------|
| Range: | Function: |
| 0* [-2147483647 - 2147483647] | For internal use only. |

3.15.4 14-3* Current Limit Control

The frequency converter features an integral current limit controller, which is activated when the motor current, and thus the torque, is higher than the torque limits set in parameter 4-16 Torque Limit Motor Mode and parameter 4-17 Torque Limit Generator Mode.

When the current limit is reached during motor operation or regenerative operation, the frequency converter tries to reduce torque below the preset torque limits as quickly as possible without losing control of the motor.

While the current control is active, the frequency converter can only be stopped by setting a digital input to [2] Coast inverse or [3] Coast and reset inv. Any signals on terminals 18–33 are not active until the frequency converter is no longer near the current limit.

By using a digital input set to [2] Coast inverse or [3] Coast and reset inv., the motor does not use the ramp-down time, since the frequency converter is coasted. If a quick stop is necessary, use the mechanical brake control function along with an external electro-mechanical brake attached to the application.

| 14-30 Current Lim Ctrl, Proportional Gain | |
|---|--|
| Range: | Function: |
| 100 %* [0 - 500 %] | Enter the proportional gain value for the current limit controller. Selection of a high value makes the controller react faster. Too high a setting leads to controller instability. |

| 14-31 Current Lim Ctrl, Integration Time | |
|--|---|
| Range: | Function: |
| Size related* [0.002 - 2 s] | Controls the current limit control integration time. Setting it to a lower value makes it react faster. A setting too low leads to control instability. |

| 14-32 Current Lim Ctrl, Filter Time | |
|-------------------------------------|---|
| Range: | Function: |
| Size related* [1 - 100 ms] | Controls the current limit control low-pass filter. This makes it possible to react to peak values or to average values. When selecting average values, it is sometimes possible to run with higher output current and instead trip on the hardware limit for current. However, the control reacts slower as it does not react on immediate values. |

| 14-35 Stall Protection | |
|------------------------|--|
| Option: | Function: |
| | Parameter 14-35 Stall Protection is active in flux mode only. |
| [0] Disabled | Disables stall protection in field weakening flux mode and might cause the motor to be lost. |
| [1] * Enabled | Enables stall protection in field weakening flux mode. |

| 14-36 Fieldweakening Function | |
|-------------------------------|---|
| Range: | Function: |
| 0* [Auto] | In this mode, the frequency converter calculates the optimal torque output. Measured DC-link voltage determines the phase-to-phase motor voltage. Magnetising reference is based on the actual voltage and utilises the information about the model of the motor. |
| 1 [1/x] | The frequency converter reduces torque output. The frequency converter sets the magnetising reference inversely proportional to the speed using a static curve that shows the relationship between DC-link voltage and the speed. |

3.15.5 14-4* Energy Optimising

Parameters for adjusting the energy optimisation level in both variable torque (VT) and automatic energy optimisation (AEO) mode in parameter 1-03 *Torque Characteristics*.

| 14-40 VT Level | |
|--------------------|---|
| Range: | Function: |
| 66 % * [40 - 90 %] | <p>NOTICE</p> <p>This parameter cannot be adjusted while the motor is running.</p> <p>NOTICE</p> <p>This parameter is not active when parameter 1-10 <i>Motor Construction</i> is set to [1] PM non-salient SPM.</p> <p>Enter the level of motor magnetization at low speed. Selection of a low value reduces energy loss in the motor, but also reduces load capability.</p> |

| 14-41 AEO Minimum Magnetisation | |
|---------------------------------|--|
| Range: | Function: |
| Size related* [40 - 200 %] | <p>NOTICE</p> <p>This parameter is not active when parameter 1-10 <i>Motor Construction</i> is set to [1] PM non-salient SPM.</p> <p>Enter the minimum allowable magnetization for AEO. Selection of a low value reduces energy loss in the motor, but can also reduce resistance to sudden load changes.</p> |

| 14-42 Minimum AEO Frequency | |
|-----------------------------|---|
| Range: | Function: |
| Size related* [5 - 40 Hz] | <p>NOTICE</p> <p>This parameter is not active when parameter 1-10 <i>Motor Construction</i> is set to [1] PM non-salient SPM.</p> <p>Enter the minimum frequency at which the automatic energy optimisation (AEO) is to be active.</p> |

| 14-43 Motor CospPhi | |
|-----------------------------|---|
| Range: | Function: |
| Size related* [0.40 - 0.95] | The Cos(phi) setpoint is automatically set for optimum AEO performance. This parameter should normally not be altered. However, in some situations it may be necessary to enter a new value to fine-tune. |

3.15.6 14-5* Environment

NOTICE

Perform a power cycle after changing any of the parameters in group 14-5* *Environment*.

These parameters help the frequency converter to operate under special environmental conditions.

| 14-50 RFI Filter | |
|------------------|---|
| Option: | Function: |
| [0] Off | Select [0] Off if the frequency converter is fed by an isolated mains source (IT mains). If a filter is used, select [0] Off during charging to prevent a high leakage current making the RCD switch. In this mode, the internal RFI filter capacitors between enclosure and the mains RFI filter circuit are cut out to reduce the ground capacity currents. |
| [1] * On | Select [1] On to ensure that the frequency converter complies with EMC standards. |

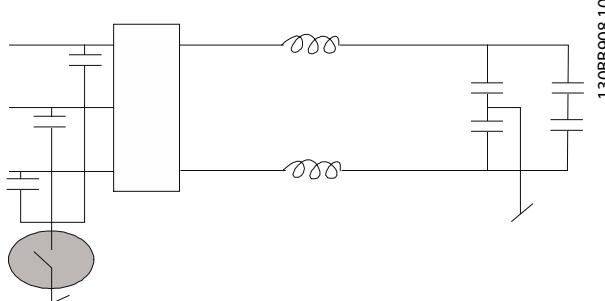

Illustration 3.62 RFI Filter

| 14-51 DC Link Compensation | |
|----------------------------|--|
| Option: | Function: |
| | The rectified AC-DC voltage in the frequency converter's DC-link is associated with voltage ripples. These ripples can increase in magnitude with increased load. These ripples are undesirable because they can generate current and torque ripples. A compensation method is used to reduce these voltage ripples in the DC link. In general, DC-link compensation is recommended for most applications, but pay attention when operating in field weakening as it can generate speed oscillations at the motor shaft. In field weakening, it is recommended to turn DC-link compensation off. |
| [0] Off | Disables DC-link compensation. |
| [1] On | Enables DC-link compensation. |

| 14-52 Fan Control | | |
|---------------------------------------|----------------------|--|
| Select minimum speed of the main fan. | | |
| Option: | Function: | |
| [0] * | Auto | Select [0] Auto to run fan only when internal temperature in frequency converter is in range 35 °C to approximately 55 °C. Fan runs at low speed below 35 °C, and at full speed at approximately 55 °C. |
| [1] | On 50% | The fan always runs at 50% speed or above. The fan runs at 50% speed at 35 °C, and at full speed at approximately 55 °C. |
| [2] | On 75% | The fan always runs at 75% speed or above. The fan runs at 75% speed at 35 °C, and at full speed at approximately 55 °C. |
| [3] | On 100% | The fan always runs at 100% speed. |
| [4] | Auto (Low temp env.) | This option is the same as [0] Auto, but with special considerations around and below 0 °C. In option [0] Auto there is a risk that the fan starts running around 0 °C as the frequency converter detects a sensor fault and thus protect the frequency converter while reporting warning 66, Heat sink Temperature Low. Option [4] Auto (Low temp env.) can be used in very cold environments and prevent the negative effects of this further cooling and avoid warning 66, Heat sink Temperature Low. |

| 14-53 Fan Monitor | | |
|-------------------|-----------|---|
| Option: | Function: | |
| | | Select the frequency converter action if a fan fault is detected. |
| [0] | Disabled | |
| [1] * | Warning | |
| [2] | Trip | |

| 14-55 Output Filter | | |
|---------------------|--|--|
| Option: | Function: | |
| | NOTICE This parameter cannot be adjusted while the motor is running. NOTICE Reset the frequency converter after selecting [2] Sine-Wave Filter Fixed. | |

| 14-55 Output Filter | | |
|---------------------|---|--|
| Option: | Function: | |
| | CAUTION OVERHEATING OF FREQUENCY CONVERTER Always set parameter 14-55 Output Filter to [2] Sine-wave fixed when using a sine-wave filter. Failure to do so can result in overheating of the frequency converter, which can result in personal injury and equipment damage. | |
| | | Select the type of output filter connected. |
| [0] * | No Filter | This is the default setting and should be used with dU/dt filters or high frequency common mode (HF-CM) filters. |
| [1] | Sine-Wave Filter | This setting is only for backwards compatibility. It enables operation with flux control principle when parameter 14-56 Capacitance Output Filter and parameter 14-57 Inductance Output Filter are programmed with the output filter capacitance and inductance. It does not limit the range of the switching frequency. |
| [2] | Sine-Wave Filter Fixed | This parameter sets a minimum allowed limit to the switching frequency and ensures that the filter is operated within the safe range of switching frequencies. Operation is possible with all control principles. For flux control principle, program parameter 14-56 Capacitance Output Filter and parameter 14-57 Inductance Output Filter (these parameters have no effect in VVC+ and U/f). The modulation pattern is set to SFAVM, which gives the lowest acoustic noise in the filter. |

| 14-56 Capacitance Output Filter | | |
|---------------------------------|-----------------|--|
| Range: | Function: | |
| Size related* | [0.1 - 6500 uF] | Set the capacitance of the output filter. The value can be found on the filter label. NOTICE This is required for correct compensation in flux mode (parameter 1-01 Motor Control Principle). |

| 14-57 Inductance Output Filter | | |
|--------------------------------|-----------------|--|
| Range: | | Function: |
| Size related* | [0.001 - 65 mH] | Set the inductance of the output filter. The value can be found on the filter label. NOTICE This is required for correct compensation in flux control principle (parameter 1-01 Motor Control Principle). |

| 14-80 Option Supplied by External 24VDC | | |
|---|-----|---|
| Option: | | Function: |
| [1] * | Yes | Select [1] Yes if a 24 V DC external supply is used to power the option. Inputs/outputs are galvanically isolated from the frequency converter when operated from an external supply. |

| 14-59 Actual Number of Inverter Units | | |
|---------------------------------------|---------|---------------------------------------|
| Range: | | Function: |
| Size related* | [1 - 1] | Set the actual number of power units. |

3.15.7 14-7* Compatibility

Parameters for compatibility of VLT 3000 and VLT 5000 with FC 300.

14-72 VLT Alarm Word

| Option: Function: | | |
|-------------------|----------------|--|
| [0] | 0 - 4294967295 | Readout of the alarm word corresponding to VLT 5000. |

14-73 VLT Warning Word

| Option: Function: | | |
|-------------------|----------------|--|
| [0] | 0 - 4294967295 | Readout of the warning word corresponding to VLT 5000. |

14-74 Leg. Ext. Status Word

| Range: Function: | | |
|------------------|------------------|--|
| 0* | [0 - 4294967295] | Readout of the external status word corresponding to VLT 5000. |

3.15.8 14-8* Options

| 14-80 Option Supplied by External 24VDC | | |
|---|--|---|
| Option: | | Function: |
| | | NOTICE This parameter is only changing function by performing a power cycle. |

| | | |
|-----|----|--|
| [0] | No | Select [0] No to use the frequency converter's 24 V DC supply. |
|-----|----|--|

| 14-88 Option Data Storage | | |
|---------------------------|-------------|---|
| Range: | | Function: |
| 0* | [0 - 65535] | This parameter stores information about options over a power cycle. |

| 14-89 Option Detection | | |
|--|------------------------|--|
| Selects the behavior of the frequency converter when a change in the option configuration is detected. | | |
| Option: | | Function: |
| [0] * | Protect Option Config. | Freezes the current settings and prevents unwanted changes when missing or defective options are detected. |
| [1] | Enable Option Change | Changes frequency converter settings and is used when modifying the system configuration. This parameter setting returns to [0] Protect Option Config. after an option change. |

| 14-90 Fault Level | | |
|---|-----------------------|--|
| Use this parameter to customize fault levels. | | |
| Option: | | Function: |
| [0] | Off | Use [0] Off with caution as it ignores all warnings and alarms for the selected source. |
| [1] | Warning | |
| [2] | Trip | Changing a fault level from default option [3] Trip Lock to [2] Trip leads to the automatic reset of the alarm. For alarms involving overcurrent, the frequency converter has a hardware protection that issues a 3 minute recovery after 2 consecutive overcurrent incidents. This hardware protection cannot be overruled. |
| [3] | Trip Lock | |
| [4] | Trip w. delayed reset | This option adds a delay between automatic resets, otherwise it is the same as option [2] Trip. The delay prevents a situation where reset is attempted repeatedly for an overcurrent situation. Hardware protection of the frequency converter forces the 3 minute recovery time after 2 consecutive overcurrents (within a short time window). |

| Failure | Alarm | Off | Warning | Trip | Trip Lock |
|---------------------------------------|-------|-----|---------|------|-----------|
| 10 V low | 1 | X | D | - | - |
| 24 V low | 47 | X | - | - | D |
| 1.8 V supply low | 48 | X | - | - | D |
| Voltage limit | 64 | X | D | - | - |
| Ground fault during ramping | 14 | - | - | D | X |
| Ground fault 2 during cont. operation | 45 | - | - | D | X |
| Torque limit | 12 | X | D | - | - |
| Overcurrent | 13 | - | - | X | D |
| Short circuit | 16 | - | - | X | D |
| Heat sink temperature | 29 | - | - | X | D |
| Heat sink sensor | 39 | - | - | X | D |
| Control card temperature | 65 | - | - | X | D |
| Power card temperature | 69 | - | 2) | X | D |
| Heat sink temperature ¹⁾ | 244 | - | - | X | D |
| Heat sink sensor ¹⁾ | 245 | - | - | X | D |
| Power card temperature ¹⁾ | 247 | - | - | - | - |
| Motor phase missing | 30–32 | - | - | X | D |
| Locked rotor | 99 | - | - | X | D |

Table 3.27 Selection of Action when Selected Alarm Appears*D* stands for the default setting.*X* stands for a possible option.

1) Only high-power frequency converters.

2) In small and medium power frequency converters, alarm 69, Power card temperature is only a warning.

3.16 Parameters: 15-** Drive Information

3.16.1 15-0* Operating Data

| 15-00 Operating hours | | |
|-------------------------|---|--|
| Range: | Function: | |
| 0 h* [0 - 2147483647 h] | View how many hours the frequency converter has run. The value is saved when the frequency converter is turned off. | |

| 15-01 Running Hours | | |
|-------------------------|---|--|
| Range: | Function: | |
| 0 h* [0 - 2147483647 h] | View how many hours the motor has run. Reset the counter in <i>parameter 15-07 Reset Running Hours Counter</i> . The value is saved when the frequency converter is turned off. | |

| 15-02 kWh Counter | | |
|-----------------------------|---|--|
| Range: | Function: | |
| 0 kWh* [0 - 2147483647 kWh] | Registers the power consumption of the motor as an average value over 1 hour. Reset the counter in <i>parameter 15-06 Reset kWh Counter</i> . | |

| 15-03 Power Up's | | |
|----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 2147483647] | View the number of times the frequency converter has been powered up. | |

| 15-04 Over Temp's | | |
|-------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the number of frequency converter temperature faults. | |

| 15-05 Over Volt's | | |
|-------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the number of frequency converter overvoltages. | |

| 15-06 Reset kWh Counter | | |
|-------------------------|---|--|
| Option: | Function: | |
| [0] * Do not reset | No reset of the kWh counter is required. | |
| [1] Reset counter | Press [OK] to reset the kWh counter to 0 (see <i>parameter 15-02 kWh Counter</i>). | |

| 15-07 Reset Running Hours Counter | | |
|-----------------------------------|--|--|
| Option: | Function: | |
| [0] * Do not reset | | |
| [1] Reset counter | To reset the running hours counter to 0, select [1] Reset and press [OK] (see <i>parameter 15-01 Running Hours</i>). This | |

15-07 Reset Running Hours Counter

| Option: | Function: |
|---------|---|
| | parameter cannot be selected via the serial port, RS485. Select [0] Do not reset if no reset of the running-hours counter is required. |

3.16.2 15-1* Data Log Settings

The data log enables continuous logging of up to 4 data sources (*parameter 15-10 Logging Source*) at individual rates (*parameter 15-11 Logging Interval*). A trigger event (*parameter 15-12 Trigger Event*) and window (*parameter 15-14 Samples Before Trigger*) are used to start and stop the logging conditionally.

| 15-10 Logging Source | | |
|----------------------|--|--|
| Option: | Function: | |
| | Select which variables are to be logged. | |
| [0] * | None | |
| [15] | Readout: actual setup | |
| [1472] | Legacy Alarm Word | |
| [1473] | Legacy Warning Word | |
| [1474] | Leg. Ext. Status Word | |
| [1600] | Control Word | |
| [1601] | Reference [Unit] | |
| [1602] | Reference % | |
| [1603] | Status Word | |
| [1606] | Actual Position | |
| [1607] | Target Position | |
| [1608] | Position Error | |
| [1610] | Power [kW] | |
| [1611] | Power [hp] | |
| [1612] | Motor Voltage | |
| [1613] | Frequency | |
| [1614] | Motor current | |
| [1616] | Torque [Nm] | |

| [38] | Digital input DI33 | |
| [50] | Comparator 4 | |
| [51] | Comparator 5 | |
| [60] | Logic rule 4 | |
| [61] | Logic rule 5 | |

| 15-13 Logging Mode | | |
|--------------------|---------------------|--|
| Option: | | Function: |
| [0] * | Log always | Select [0] Log always for continuous logging. |
| [1] | Log once on trigger | Select [1] Log once on trigger to conditionally start and stop logging using parameter 15-12 Trigger Event and parameter 15-14 Samples Before Trigger. |

| 15-14 Samples Before Trigger | | |
|------------------------------|-------------|---|
| Range: | | Function: |
| 50* | [0 - 100] | Before a trigger event, enter the percentage of all samples which should be retained in the log. See also parameter 15-12 Trigger Event and parameter 15-13 Logging Mode. |

3.16.3 15-2* Historic Log

View up to 50 logged data items via the array parameters in this parameter group. Data is logged every time an event occurs (not to be confused with SLC events). Events in this context are defined as a change in 1 of the following areas:

- Digital inputs.
- Digital outputs.
- Warning word.
- Alarm word.
- Status word.

- Control word.
- Extended status word.

Events are logged with value and time stamp in ms. The time interval between 2 events depends on how often events occur (maximum once every scan time). Data logging is continuous, but if an alarm occurs, the log is saved and the values can be viewed on the display. This feature is useful, for example when carrying out service following a trip. View the historic log contained in this parameter via the serial communication port or via the display.

15-20 Historic Log: Event

Array [50]

Range: **Function:**

| | | |
|----|------------|---|
| 0* | [0 - 255] | View the event type of the logged events. |
|----|------------|---|

15-21 Historic Log: Value

Array [50]

Range: **Function:**

| | | | | | | | | | | | | | | | | |
|---|--|---|---------------|---|---|--|--------------|---|------------|---|-------------|---|--------------|---|----------------------|---|
| 0* | [0 - 2147483647] | <p>View the value of the logged event. Interpret the event values according to <i>Table 3.28</i>:</p> <table border="1"> <tr> <td>Digital input</td><td>Decimal value. See <i>parameter 16-60 Digital Input</i> for description after converting to binary value.</td></tr> <tr> <td>Digital output (not monitored in this SW release)</td><td>Decimal value. See <i>parameter 16-66 Digital Output [bin]</i> for a description after converting to binary value.</td></tr> <tr> <td>Warning word</td><td>Decimal value. See <i>parameter 16-92 Warning Word</i> for a description.</td></tr> <tr> <td>Alarm word</td><td>Decimal value. See <i>parameter 16-90 Alarm Word</i> for a description.</td></tr> <tr> <td>Status word</td><td>Decimal value. See <i>parameter 16-03 Status Word</i> for a description after converting to binary value.</td></tr> <tr> <td>Control word</td><td>Decimal value. See <i>parameter 16-00 Control Word</i> for a description.</td></tr> <tr> <td>Extended status word</td><td>Decimal value. See <i>parameter 16-94 Ext. Status Word</i> for a description.</td></tr> </table> | Digital input | Decimal value. See <i>parameter 16-60 Digital Input</i> for description after converting to binary value. | Digital output (not monitored in this SW release) | Decimal value. See <i>parameter 16-66 Digital Output [bin]</i> for a description after converting to binary value. | Warning word | Decimal value. See <i>parameter 16-92 Warning Word</i> for a description. | Alarm word | Decimal value. See <i>parameter 16-90 Alarm Word</i> for a description. | Status word | Decimal value. See <i>parameter 16-03 Status Word</i> for a description after converting to binary value. | Control word | Decimal value. See <i>parameter 16-00 Control Word</i> for a description. | Extended status word | Decimal value. See <i>parameter 16-94 Ext. Status Word</i> for a description. |
| Digital input | Decimal value. See <i>parameter 16-60 Digital Input</i> for description after converting to binary value. | | | | | | | | | | | | | | | |
| Digital output (not monitored in this SW release) | Decimal value. See <i>parameter 16-66 Digital Output [bin]</i> for a description after converting to binary value. | | | | | | | | | | | | | | | |
| Warning word | Decimal value. See <i>parameter 16-92 Warning Word</i> for a description. | | | | | | | | | | | | | | | |
| Alarm word | Decimal value. See <i>parameter 16-90 Alarm Word</i> for a description. | | | | | | | | | | | | | | | |
| Status word | Decimal value. See <i>parameter 16-03 Status Word</i> for a description after converting to binary value. | | | | | | | | | | | | | | | |
| Control word | Decimal value. See <i>parameter 16-00 Control Word</i> for a description. | | | | | | | | | | | | | | | |
| Extended status word | Decimal value. See <i>parameter 16-94 Ext. Status Word</i> for a description. | | | | | | | | | | | | | | | |
| Table 3.28 Logged Events | | | | | | | | | | | | | | | | |

15-22 Historic Log: Time

Array [50]

Range: **Function:**

| | | |
|-------|---------------------|--|
| 0 ms* | [0 - 2147483647 ms] | View the time at which the logged event occurred. Time is measured in ms since frequency converter start. The maximum value corresponds to approximately 24 days, which means that the count restarts at 0 after this time period. |
|-------|---------------------|--|

3.16.4 15-3* Alarm Log

Parameters in this group are array parameters, where up to 10 fault logs can be viewed. 0 is the most recent logged data, and 9 is the oldest. Fault codes, values, and time stamp can be viewed for all logged data.

15-30 Fault Log: Error Code

Range: **Function:**

| | | |
|----|------------|---|
| 0* | [0 - 255] | View the fault code and look up its meaning in <i>chapter 5 Troubleshooting</i> . |
|----|------------|---|

15-31 Alarm Log: Value

Array [10]

Range: **Function:**

| | | |
|----|-------------------|---|
| 0* | [-32767 - 32767] | View an extra description of the error. This parameter is mostly used in combination with <i>alarm 38, internal fault</i> . |
|----|-------------------|---|

15-32 Alarm Log: Time

Array [10]

Range: **Function:**

| | | |
|------|--------------------|--|
| 0 s* | [0 - 2147483647 s] | View the time when the logged event occurred. Time is measured in s from frequency converter start-up. |
|------|--------------------|--|

3.16.5 15-4* Drive Identification

Parameters containing read-only information about the hardware and software configuration of the frequency converter.

15-40 FC Type

Range: **Function:**

| | | |
|----|----------|--|
| 0* | [0 - 6] | View the frequency converter type. The readout is identical to the FC 300 power field of the type code definition, characters 1–6. |
|----|----------|--|

15-41 Power Section

Range: **Function:**

| | | |
|----|-----------|---|
| 0* | [0 - 20] | View the frequency converter type. The readout is identical to the FC 300 power field of the type code definition, characters 7–10. |
|----|-----------|---|

| 15-42 Voltage | | |
|---------------|----------|--|
| Range: | | Function: |
| 0* | [0 - 20] | View the frequency converter type. The readout is identical to the FC 300 power field of the type code definition, characters 11-12. |

| 15-43 Software Version | | |
|------------------------|----------|--|
| Range: | | Function: |
| 0* | [0 - 5] | View the combined SW version (or package version) consisting of power SW and control SW. |

| 15-44 Ordered Typecode String | | |
|-------------------------------|-----------|--|
| Range: | | Function: |
| 0* | [0 - 40] | View the type code string used for reordering the frequency converter in its original configuration. |

| 15-45 Actual Typecode String | | |
|------------------------------|-----------|-----------------------------------|
| Range: | | Function: |
| 0* | [0 - 40] | View the actual type code string. |

| 15-46 Frequency Converter Ordering No | | |
|---------------------------------------|----------|---|
| Range: | | Function: |
| 0* | [0 - 8] | View the 8-digit ordering number used for reordering the frequency converter in its original configuration. To restore the ordering number after the power card exchange, see parameter 14-29 Service Code. |

| 15-47 Power Card Ordering No | | |
|------------------------------|----------|--------------------------------------|
| Range: | | Function: |
| 0* | [0 - 8] | View the power card ordering number. |

| 15-48 LCP Id No | | |
|-----------------|-----------|-------------------------|
| Range: | | Function: |
| 0* | [0 - 20] | View the LCP ID number. |

| 15-49 SW ID Control Card | | |
|--------------------------|-----------|--|
| Range: | | Function: |
| 0* | [0 - 20] | View the control card software version number. |

| 15-50 SW ID Power Card | | |
|------------------------|-----------|--|
| Range: | | Function: |
| 0* | [0 - 20] | View the power card software version number. |

| 15-51 Frequency Converter Serial Number | | |
|---|-----------|---|
| Range: | | Function: |
| 0* | [0 - 10] | View the frequency converter serial number. |

| 15-53 Power Card Serial Number | | |
|--------------------------------|-----------|------------------------------------|
| Range: | | Function: |
| 0* | [0 - 19] | View the power card serial number. |

| 15-54 Config File Name | | |
|------------------------|----------|---|
| Array [5] | | Function: |
| Size related* | [0 - 16] | Shows the special configuration file names. |

| 15-59 CSIV Filename | | |
|---------------------|----------|--|
| Range: | | Function: |
| Size related* | [0 - 16] | Shows the currently used customer-specific initial values (CSIV) filename. |

3.16.6 15-6* Option Ident.

This read-only parameter group contains information about the hardware and software configuration of the options installed in slots A, B, C0, and C1.

| 15-60 Option Mounted | | |
|----------------------|-----------|---------------------------------|
| Array [8] | | Function: |
| 0* | [0 - 30] | View the installed option type. |

| 15-61 Option SW Version | | |
|-------------------------|-----------|---|
| Array [8] | | Function: |
| 0* | [0 - 20] | View the installed option software version. |

| 15-62 Option Ordering No | | |
|--------------------------|----------|--|
| Array [8] | | Function: |
| 0* | [0 - 8] | Shows the ordering number for the installed options. |

| 15-63 Option Serial No | | |
|------------------------|-----------|--|
| Array [8] | | Function: |
| 0* | [0 - 18] | View the installed option serial number. |

| 15-70 Option in Slot A | | |
|------------------------|-----------|--|
| Range: | | Function: |
| 0* | [0 - 30] | View the type code string for the option installed in slot A, and a translation of the type code string. for example, for type code string AX, the translation is <i>No option</i> . |

| 15-71 Slot A Option SW Version | | |
|--------------------------------|-----------|---|
| Range: | | Function: |
| 0* | [0 - 20] | View the software version for the option installed in slot A. |

| | |
|---|---|
| 15-72 Option in Slot B | |
| Range: | Function: |
| 0* [0 - 30] | View the type code string for the option installed in slot B, and a translation of the type code string. For example, for type code string <i>BX</i> , the translation is <i>No option</i> . |
| 15-73 Slot B Option SW Version | |
| Range: | Function: |
| 0* [0 - 20] | View the software version for the option installed in slot B. |
| 15-74 Option in Slot C0/E0 | |
| Range: | Function: |
| 0* [0 - 30] | View the type code string for the option installed in slot C, and a translation of the type code string. For example, for type code string <i>CXXXX</i> , the translation is <i>No option</i> . |
| 15-75 Slot C0/E0 Option SW Version | |
| Range: | Function: |
| 0* [0 - 20] | View the software version for the option installed in slot C. |
| 15-76 Option in Slot C1/E1 | |
| Range: | Function: |
| 0* [0 - 30] | Shows the type code string for the option in slot C1 (<i>CXXXX</i> if no option) and the translation, that is <i>No option</i> . |
| 15-77 Slot C1/E1 Option SW Version | |
| Range: | Function: |
| 0* [0 - 20] | Shows the software version for the installed option in option slot C. |
| 15-80 Fan Running Hours | |
| Range: | Function: |
| 0 h* [0 - 2147483647 h] | View how many hours the heat sink fan has run (increments for each hour). The value is saved when the frequency converter is turned off. |
| 15-81 Preset Fan Running Hours | |
| Range: | Function: |
| 0 h* [0 - 99999 h] | Enter value to preset the fan running hours counter, see <i>parameter 15-80 Fan Running Hours</i> . This parameter cannot be selected via the serial port, RS485. |

| | |
|---|--|
| 15-89 Configuration Change Counter | |
| Range: | Function: |
| 0* [0 - 65535] | NOTICE This parameter cannot be adjusted while the motor runs. |

3.16.7 15-9* Parameter Info

| | |
|-----------------------------------|--|
| 15-92 Defined Parameters | |
| Range: | Function: |
| 0* [0 - 9999] | View a list of all defined parameters in the frequency converter. The list ends with 0. |
| 15-93 Modified Parameters | |
| Range: | Function: |
| 0* [0 - 9999] | View a list of the parameters that have been changed from their default setting. The list ends with 0. Changes may not be visible until up to 30 s after implementation. |
| 15-98 Drive Identification | |
| Range: | Function: |
| 0* [0 - 40] | This parameter contains data that is used by the MCT 10 Set-up Software. |
| 15-99 Parameter Metadata | |
| Range: | Function: |
| 0* [0 - 9999] | This parameter contains data used by the MCT 10 Set-up Software. |

3.17 Parameters: 16-** Data Readouts

3.17.1 16-0* General Status

| 16-00 Control Word | | |
|--------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the control word sent from the frequency converter via the serial communication port in hex code. | |

| 16-01 Reference [Unit] | | |
|---------------------------|---|---|
| Range: | Function: | |
| 0 ReferenceFeed-backUnit* | [-999999 - 999999 ReferenceFeed-backUnit] | View the present reference value applied on impulse or analog basis in the unit resulting from the configuration selected in <i>parameter 1-00 Configuration Mode</i> (Hz, Nm, or RPM). |

| 16-02 Reference [%] | | |
|---------------------|---|--|
| Range: | Function: | |
| 0 %* [-200 - 200 %] | View the total reference. The total reference is the sum of digital, analog, preset, bus, and freeze references, plus catch up and slow down. | |

| 16-03 Status Word | | |
|-------------------|---|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the status word sent from the frequency converter via the serial communication port in hex code. | |

| 16-05 Main Actual Value [%] | | |
|-----------------------------|--|--|
| Range: | Function: | |
| 0 %* [-100 - 100 %] | View the 2-byte word sent with the status word to the fieldbus master reporting the main actual value. | |

| 16-06 Actual Position | | |
|-----------------------|---|---|
| Range: | Function: | |
| 0 CustomReadoutUnit2* | [-2000000000 - 2000000000 CustomReadoutUnit2] | Shows the actual position in position units defined in parameter group 17-7* <i>Position Scaling</i> . The value is based on the encoder feedback in closed loop or on the angle calculated by the motor control in open loop. For information about configuring the readouts, see <i>chapter 3.18.5 17-7* Position Scaling</i> . |

16-07 Target Position

Shows the actual end target position for the active positioning command in position units. Position units are defined in parameter group 17-7* *Position Scaling*.

Range: Function:

| | | |
|-----------------------|---|--|
| 0 CustomReadoutUnit2* | [-2000000000 - 2000000000 CustomReadoutUnit2] | |
|-----------------------|---|--|

16-08 Position Error

Shows the actual position error in position units defined in parameter group 17-7* *Position Scaling*. Position error is the difference between the actual position and the commanded position. The position error is the input for the position PI controller.

Range: Function:

| | | |
|-----------------------|---|--|
| 0 CustomReadoutUnit2* | [-2000000000 - 2000000000 CustomReadoutUnit2] | |
|-----------------------|---|--|

16-09 Custom Readout

Range: Function:

| | | |
|----------------------|-----------------------------------|---|
| 0 CustomReadoutUnit* | [0 - 999999.99 CustomReadoutUnit] | View the value of custom readout from <i>parameter 0-30 Unit for User-defined Readout</i> to <i>parameter 0-32 Custom Readout Max Value</i> . |
|----------------------|-----------------------------------|---|

3.17.2 16-1* Motor Status

16-10 Power [kW]

Range: Function:

| | | |
|-------|----------------|--|
| 0 kW* | [0 - 10000 kW] | Shows motor power in kW. The value shown is calculated based on the actual motor voltage and motor current. The value is filtered, and therefore approximately 1.3 s may pass from when an input value changes to when the data readout values change. The resolution of readout value on fieldbus is in 10 W steps. |
|-------|----------------|--|

16-11 Power [hp]

Range: Function:

| | | |
|-------|----------------|--|
| 0 hp* | [0 - 10000 hp] | View the motor power in hp. The value shown is calculated based on the actual motor voltage and motor current. The value is filtered, and therefore approximately 1.3 ms may pass from when an input value changes to when the data readout values change. |
|-------|----------------|--|

16-12 Motor Voltage

Range: Function:

| | | |
|------|--------------|--|
| 0 V* | [0 - 6000 V] | View the motor voltage, a calculated value used for controlling the motor. |
|------|--------------|--|

| | | | | | |
|------------------------------|-----------------------------|---|---|-------------------------|---|
| 16-13 Frequency | | | 16-19 KTY sensor temperature | | |
| Range: Function: | | | Range: Function: | | |
| 0 Hz* | [0 - 6500 Hz] | View the motor frequency, without resonance damping. | 0 °C* | [0 - 0 °C] | Returning the actual temperature on KTY sensor built into the motor. See parameter group chapter 3.3.12 1-9* Motor Temperature. |
| 16-14 Motor current | | | 16-20 Motor Angle | | |
| Range: Function: | | | Range: Function: | | |
| 0 A* | [0 - 10000 A] | View the motor current measured as an average value, I_{RMS} . The value is filtered, and thus approximately 1.3 s may pass from when an input value changes to when the data readout values change. | 0* | [0 - 65535] | View the current encoder/resolver angle offset relative to the index position. The value range of 0–65535 corresponds to 0–2xpi (radian). |
| 16-15 Frequency [%] | | | 16-21 Torque [%] High Res. | | |
| Range: Function: | | | Range: Function: | | |
| 0 %* | [-100 - 100 %] | View a 2 byte word reporting the actual motor frequency (without resonance damping) as a percentage (scale 0000–4000 hex) of parameter 4-19 Max Output Frequency. Set parameter 9-16 PCD Read Configuration index 1 to send it with the status word instead of the MAV. | 0 %* | [-200 - 200 %] | The value shown is the torque in percent of nominal torque, with sign and 0.1% resolution, applied to the motor shaft. |
| 16-16 Torque [Nm] | | | 16-22 Torque [%] | | |
| Range: Function: | | | Range: Function: | | |
| 0 Nm* | [-3000 - 3000 Nm] | View the torque value with sign, applied to the motor shaft. Linearity is not exact between 160% motor current and torque in relation to the rated torque. Some motors supply more than 160% torque. Therefore, the minimum value and the maximum value depend on the maximum motor current and the motor used. The value is filtered, and thus approximately 30 ms may pass from when an input changes value to when the data readout values change. In flux control principle, this readout is compensated for in parameter 1-68 Motor Inertia for improved accuracy. | 0 %* | [-200 - 200 %] | Value shown is the torque in percent of nominal torque, with sign, applied to the motor shaft. |
| 16-17 Speed [RPM] | | | 16-23 Motor Shaft Power [kW] | | |
| Range: Function: | | | Range: Function: | | |
| 0 RPM* | [-30000 - 30000 RPM] | View the actual motor RPM. In open loop or closed loop process control, the motor RPM is estimated. In speed closed-loop modes, the motor RPM is measured. | 0 kW* | [0 - 10000 kW] | Readout of the mechanical power applied to the motor shaft. |
| 16-18 Motor Thermal | | | 16-24 Calibrated Stator Resistance | | |
| Range: Function: | | | Range: Function: | | |
| 0 %* | [0 - 100 %] | View the calculated thermal load on the motor. The cut-out limit is 100%. The basis for calculation is the ETR function selected in parameter 1-90 Motor Thermal Protection. | 0.0000 Ohm* | [0.0000 - 100.0000 Ohm] | Shows the calibrated stator resistance. |
| 16-3* Drive Status | | | 16-25 Torque [Nm] High | | |
| Range: Function: | | | Range: Function: | | |
| 0 Nm* | [-200000000 - 200000000 Nm] | View the torque value with sign, applied to the motor shaft. Some motors supply more than 160% torque. Therefore, the minimum value and the maximum value depend on the maximum motor current as well as the motor used. This specific readout has been adapted to be able to show higher values than the standard readout in parameter 16-16 Torque [Nm]. | | | |
| 16-30 DC Link Voltage | | | 16-30 DC Link Voltage | | |
| Range: Function: | | | Range: Function: | | |
| 0 V* | [0 - 10000 V] | View a measured value. The value is filtered with a 30 ms time constant. | | | |

| 16-32 Brake Energy /s | | |
|-----------------------|----------------|---|
| Range: | | Function: |
| 0 kW* | [0 - 10000 kW] | View the brake power transmitted to an external brake resistor, stated as an instant value. |

| 16-33 Brake Energy Average | | |
|----------------------------|----------------|--|
| Range: | | Function: |
| 0 kW* | [0 - 10000 kW] | View the brake power transmitted to an external brake resistor. The mean power is calculated on an average level based on the selected time period within parameter 2-13 Brake Power Monitoring. |

| 16-34 Heatsink Temp. | | |
|----------------------|--------------|--|
| Range: | | Function: |
| 0 °C* | [0 - 255 °C] | View the frequency converter heat sink temperature. The cut-out limit is 90 ±5 °C (194 ±9 °F), and the motor cuts back in at 60 ±5 °C (140 ±9 °F). |

| 16-35 Inverter Thermal | | |
|------------------------|-------------|---|
| Range: | | Function: |
| 0 %* | [0 - 100 %] | View the percentage load on the inverter. |

| 16-36 Inv. Nom. Current | | |
|-------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 10000 A] | View the inverter nominal current, which must match the nameplate data on the connected motor. The data is used for calculation of torque, motor overload protection, and so on. |

| 16-37 Inv. Max. Current | | |
|-------------------------|------------------|--|
| Range: | | Function: |
| Size related* | [0.01 - 10000 A] | View the inverter maximum current, which must match the nameplate data on the connected motor. The data is used for calculation of torque, motor overload protection, and so on. |

| 16-38 SL Controller State | | |
|---------------------------|-----------|---|
| Range: | | Function: |
| 0* | [0 - 100] | View the state of the event under execution by the SL controller. |

| 16-39 Control Card Temp. | | |
|--------------------------|--------------|---|
| Range: | | Function: |
| 0 °C* | [0 - 100 °C] | View the temperature on the control card, stated in °C. |

| 16-40 Logging Buffer Full | | |
|---------------------------|-----|--|
| Option: | | Function: |
| | | View whether the logging buffer is full (see chapter 3.16.2 15-1* Data Log Settings). The logging buffer is never full when parameter 15-13 Logging Mode is set to [0] Log always. |
| [0]* | No | |
| [1] | Yes | |

| 16-41 Logging Buffer Full | | |
|---------------------------|-----------|-----------|
| Range: | | Function: |
| 0* | [0 - 50] | |

| 16-44 Speed Error [RPM] | | |
|-------------------------|-----------------------|-----------|
| Range: | | Function: |
| 0 RPM* | [-30000 - 30000 RPM] | |

| 16-45 Motor Phase U Current | | |
|-----------------------------|---------------|---|
| Range: | | Function: |
| 0 A* | [0 - 10000 A] | Shows the motor phase U_{RMS} current. Facilitates monitoring of imbalance in the motor currents, detection of weak motor cables or imbalance in motor windings. |

| 16-46 Motor Phase V Current | | |
|-----------------------------|---------------|---|
| Range: | | Function: |
| 0 A* | [0 - 10000 A] | Shows the motor phase V_{RMS} current. Facilitates monitoring of imbalance in the motor currents, detection of weak motor cables or imbalance in motor windings. |

| 16-47 Motor Phase W Current | | |
|-----------------------------|---------------|---|
| Range: | | Function: |
| 0 A* | [0 - 10000 A] | Shows the motor phase W_{RMS} current. Facilitates monitoring of imbalance in the motor currents, detection of weak motor cables or imbalance in motor windings. |

| 16-48 Speed Ref. After Ramp [RPM] | | |
|-----------------------------------|-----------------------|---|
| Range: | | Function: |
| 0 RPM* | [-30000 - 30000 RPM] | This parameter specifies the reference given to the frequency converter after the speed ramp. |

| 16-49 Current Fault Source | | |
|----------------------------|---------|---|
| Range: | | Function: |
| 0* | [0 - 8] | Value indicates source of current faults including short circuit, overcurrent, and imbalance of supply voltage (from left): 1–4 Inverter 5–8 Rectifier 0 No fault recorded |

3.17.4 16-5* Ref. & Feedb.

3

| 16-50 External Reference | |
|--------------------------|---|
| Range: | Function: |
| 0* [-200 - 200] | View the total reference, the sum of digital, analog, preset, fieldbus, and freeze references, plus catch up and slow down. |

| 16-51 Pulse Reference | | |
|-----------------------|----------------|---|
| Range: | Function: | |
| 0* | [-200 - 200] | View the reference value from programmed digital inputs. The readout can also reflect the impulses from an incremental encoder. |

| 16-52 Feedback[Unit] | |
|---------------------------|--|
| Range: | Function: |
| 0 Reference-FeedbackUnit* | <p style="margin-left: 40px;">[-999999.999 - 999999.999 ReferenceFeedbackUnit]</p> <p style="margin-left: 40px;">View the feedback unit resulting from the selection of unit and scaling in <i>parameter 3-00 Reference Range</i>, <i>parameter 3-01 Reference/Feedback Unit</i>, <i>parameter 3-02 Minimum/Offset Reference</i>, and <i>parameter 3-03 Maximum Reference</i>.</p> |

| 16-53 Digi Pot Reference | | |
|--------------------------|---|--|
| Range: | Function: | |
| 0* [-200 - 200] | View the contribution of the digital potentiometer to the actual reference. | |

| 16-57 Feedback [RPM] | |
|----------------------|--|
| Range: | Function: |
| 0 RPM* | <p>[-30000 - 30000 RPM]</p> <p>Readout parameter where the actual motor RPM from the feedback source can be read in both closed loop and open loop. The feedback source is selected by parameter 7-00 Speed PID Feedback Source.</p> |

3.17.5 16-6* Inputs and Outputs

| 16-60 Digital Input | |
|---------------------|--|
| Range: | Function: |
| 0* [0 - 65535] | View the signal states from the active digital inputs. Example: Input 18 corresponds to bit number 5, 0 = no signal, 1 = connected signal. Bit 6 works in the opposite way, on = 0, off = 1 (Safe Torque Off input). |

| Range: | | Function: | |
|--------|--|-----------|--|
| | | Bit 0 | Digital input terminal 33. |
| | | Bit 1 | Digital input terminal 32. |
| | | Bit 2 | Digital input terminal 29. |
| | | Bit 3 | Digital input terminal 27. |
| | | Bit 4 | Digital input terminal 19. |
| | | Bit 5 | Digital input terminal 18. |
| | | Bit 6 | Digital input terminal 37. |
| | | Bit 7 | Digital input VLT® General Purpose I/O MCB 101 terminal X30/4. |
| | | Bit 8 | Digital input VLT® General Purpose I/O MCB 101 terminal X30/3. |
| | | Bit 9 | Digital input VLT® General Purpose I/O MCB 101 terminal X30/2. |
| | | Bit 10–63 | Reserved for future terminals. |

| Illustration 3.64 Relay Settings | | | | |
| 16-72 Counter A | | | | |
| Range: | Function: | | | |
| 0* | [-2147483648 - 2147483647] View the present value of counter A. Counters are useful as comparator operands, see <i>parameter 13-10 Comparator Operand</i> . Reset or change the value either via digital inputs (parameter group 5-1* <i>Digital Inputs</i>) or by using an SLC action (<i>parameter 13-52 SL Controller Action</i>). | | | |
| 16-73 Counter B | | | | |
| Range: | Function: | | | |
| 0* | [-2147483648 - 2147483647] View the present value of counter B. Counters are useful as comparator operands (<i>parameter 13-10 Comparator Operand</i>). Reset or change the value either via digital inputs (parameter group 5-1* <i>Digital Inputs</i>) or by using an SLC action (<i>parameter 13-52 SL Controller Action</i>). | | | |
| 16-74 Prec. Stop Counter | | | | |
| Range: | Function: | | | |
| 0* | [0 - 2147483647] Returns the actual counter value of precise counter (<i>parameter 1-84 Precise Stop Counter Value</i>). | | | |
| 16-75 Analog In X30/11 | | | | |
| Range: | Function: | | | |
| 0* | [-20 - 20] View the actual value at input X30/11 of VLT® General Purpose I/O MCB 101. | | | |
| 16-76 Analog In X30/12 | | | | |
| Range: | Function: | | | |
| 0* | [-20 - 20] View the actual value at input X30/12 of VLT® General Purpose I/O MCB 101. | | | |
| 16-77 Analog Out X30/8 [mA] | | | | |
| Range: | Function: | | | |
| 0* | [0 - 30] View the actual value at output X30/8 in mA. | | | |
| 16-78 Analog Out X45/1 [mA] | | | | |
| Range: | Function: | | | |
| 0* | [0 - 30] View the actual value at output X45/1. The value shown reflects the selection in <i>parameter 6-70 Terminal X45/1 Output</i> . | | | |
| 16-79 Analog Out X45/3 [mA] | | | | |
| Range: | Function: | | | |
| 0* | [0 - 30] View the actual value at output X45/3. The value shown reflects the selection in <i>parameter 6-80 Terminal X45/3 Output</i> . | | | |

3.17.6 16-8* Fieldbus & FC Port

Parameters for reporting the bus references and control words.

| 16-80 Fieldbus CTW 1 | | |
|----------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the 2-byte control word (CTW) received from the fieldbus master. Interpretation of the control word depends on the fieldbus option installed and the control word profile selected in <i>parameter 8-10 Control Profile</i> . For more information, refer to the relevant fieldbus manual. | |

| 16-82 Fieldbus REF 1 | | |
|----------------------|--|--|
| Range: | Function: | |
| 0* [-200 - 200] | View the 2-byte word sent with the control word from the fieldbus master to set the reference value. For more information, refer to the relevant fieldbus manual. | |

| 16-83 Fieldbus REF 2 | | |
|-----------------------|---|--|
| Range: | Function: | |
| 0 CustomReadoutUnit2* | [-2147483647 - 2147483647 CustomReadoutUnit2] | |

| 16-84 Comm. Option STW | | |
|------------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the extended fieldbus communication option status word. For more information, refer to the relevant fieldbus manual. | |

| 16-85 FC Port CTW 1 | | |
|---------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | View the 2-byte control word (CTW) received from the fieldbus master. Interpretation of the control word depends on the fieldbus option installed and the control word profile selected in <i>parameter 8-10 Control Profile</i> . | |

| 16-86 FC Port REF 1 | | |
|---------------------|---|--|
| Range: | Function: | |
| 0* [-200 - 200] | View the 2-byte status word (STW) sent to the fieldbus master. Interpretation of the status word depends on the fieldbus option installed and the | |

| 16-86 FC Port REF 1 | | |
|---------------------|--|--|
| Range: | Function: | |
| | control word profile selected in <i>parameter 8-10 Control Profile</i> . | |

| 16-87 Bus Readout Alarm/Warning | | |
|---------------------------------|--|--|
| Range: | Function: | |
| 0* [0 - 65535] | Alarm and warning numbers in hex as showed in the alarm log. The high byte contains the alarm, the low byte the warning. The alarm number is the first one that occurred after the last reset. | |

| 16-89 Configurable Alarm/Warning Word | | |
|---------------------------------------|---|--|
| Range: | Function: | |
| 0* [0 - 65535] | This alarm/warning word is configured in <i>parameter 8-17 Configurable Alarm and Warningword</i> to match the actual requirements. | |

3.17.7 16-9* Diagnosis Readouts

NOTICE

When using MCT 10 Set-up Software, the readout parameters can only be read online, that is as the actual status. This means that the status is not stored in the MCT 10 Set-up Software file.

| 16-90 Alarm Word | | |
|----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 4294967295] | View the alarm word sent via the serial communication port in hex code. | |

| 16-91 Alarm Word 2 | | |
|----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 4294967295] | View the alarm word sent via the serial communication port in hex code. | |

| 16-92 Warning Word | | |
|----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 4294967295] | View the warning word sent via the serial communication port in hex code. | |

| 16-93 Warning Word 2 | | |
|----------------------|---|--|
| Range: | Function: | |
| 0* [0 - 4294967295] | View the warning word sent via the serial communication port in hex code. | |

| 16-94 Ext. Status Word | | |
|------------------------|---|--|
| Range: | Function: | |
| 0* [0 - 4294967295] | Returns the extended warning word sent via the serial communication port in hex code. | |

3.18 Parameters: 17-** Feedback

More parameters to configure the feedback from the encoder (VLT® Encoder Input MCB 102), resolver (VLT® Resolver Input MCB 103), or the frequency converter itself.

3.18.1 17-1* Inc. Enc. Interface

Parameters in this group configure the incremental interface of the VLT® Encoder Input MCB 102. Both the incremental and absolute interfaces are active at the same time.

NOTICE

These parameters cannot be adjusted while the motor runs.

| 17-10 Signal Type | | |
|---|-----------------|--|
| Select the incremental type (A/B channel) of the encoder in use. Find the information on the encoder datasheet. | | |
| Select [0] None if the feedback sensor is an absolute encoder only. | | |
| Option: | Function: | |
| [0] | None | |
| [1] * | RS422 (5V TTL) | |
| [2] | Sinusoidal 1Vpp | |

| 17-11 Resolution (PPR) | | |
|------------------------|--------------|---|
| Range: | Function: | |
| 1024* | [10 - 10000] | Enter the resolution of the incremental track, that is, the number of pulses or periods per revolution. |

3.18.2 17-2* Abs. Enc. Interface

Parameters in this group configure the absolute interface of the VLT® Encoder Input MCB 102. Both the incremental and absolute interfaces are active at the same time.

| 17-20 Protocol Selection | | |
|--------------------------|-----------|--|
| Option: | Function: | |
| | | NOTICE This parameter cannot be adjusted while the motor runs. |
| [0] * | None | Select [0] None if the feedback sensor is an incremental encoder only. |
| [1] | HIPERFACE | Select [1] HIPERFACE if the encoder is absolute only. |
| [2] | EnDat | |
| [4] | SSI | |

17-21 Resolution (Positions/Rev)

| Range: | Function: |
|---------------|----------------|
| Size related* | [4 - 131072] |

Select the resolution of the absolute encoder, that is, the number of counts per revolution. The value depends on setting in parameter 17-20 Protocol Selection.

17-24 SSI Data Length

| Range: | Function: |
|--------|-----------|
| 13* | [13 - 25] |

Set the number of bits for the SSI telegram. Select 13 bits for single-turn encoders and 25 bits for multi-turn encoders.

17-25 Clock Rate

| Range: | Function: |
|---------------|------------------|
| Size related* | [100 - 260 kHz] |

Set the SSI clock rate. With long encoder cables, the clock rate must be reduced.

17-26 SSI Data Format

| Option: | Function: |
|---------|-------------|
| [0] * | Gray code |
| [1] | Binary code |

Set the data format of the SSI data.

17-34 HIPERFACE Baudrate

| Option: | Function: | NOTICE |
|---------|-----------|---|
| | | This parameter cannot be adjusted while the motor runs. |
| | | Select the baud rate of the attached encoder. The parameter is only accessible when parameter 17-20 Protocol Selection is set to [1] HIPERFACE. |
| [0] | 600 | |
| [1] | 1200 | |
| [2] | 2400 | |
| [3] | 4800 | |
| [4] * | 9600 | |
| [5] | 19200 | |
| [6] | 38400 | |

3.18.3 17-5* Resolver Interface

This parameter group is used for setting parameters for the VLT® Resolver Input MCB 103.

Usually, the resolver feedback is used as motor feedback from permanent magnet motors with parameter 1-01 Motor Control Principle set to [3] Flux w/motor feedback.

Resolver parameters cannot be adjusted while the motor runs.

| 17-50 Poles | | |
|-------------|---|--|
| Range: | Function: | |
| 2* [2 - 8] | Set the pole number on the resolver. The value is stated in the datasheet for resolvers. | |

| 17-51 Input Voltage | | |
|---------------------|---|--|
| Range: | Function: | |
| 7 V* [2 - 8 V] | Set the input voltage to the resolver. The voltage is stated as RMS value. The value is stated in the datasheet for resolvers. | |

| 17-52 Input Frequency | | |
|-----------------------|---|--|
| Range: | Function: | |
| 10 kHz* [2 - 15 kHz] | Set the input frequency to the resolver. The value is stated in the datasheet for resolvers. | |

| 17-53 Transformation Ratio | | |
|----------------------------|--|--|
| Range: | Function: | |
| 0.5* [0.1 - 1.1] | Set the transformation ratio for the resolver. The transformation ration is: $T_{ratio} = \frac{V_{Out}}{V_{In}}$ The value is stated in the datasheet for resolvers. | |

| 17-56 Encoder Sim. Resolution | | |
|-------------------------------|-----------|--|
| Option: | Function: | |
| [0] * | Disabled | |
| [1] | 512 | |
| [2] | 1024 | |
| [3] | 2048 | |
| [4] | 4096 | |

| 17-59 Resolver Interface | | |
|--------------------------|-----------|--|
| Option: | Function: | |
| [0] * | Disabled | |
| [1] | Enabled | |

3.18.4 17-6* Monitoring and Application

This parameter group is for selecting extra functions when VLT® Encoder Input MCB 102 or VLT® Resolver Input MCB 103 is fitted into option slot B as speed feedback.

Monitoring and application parameters cannot be adjusted while the motor runs.

| 17-60 Feedback Direction | | |
|--------------------------|-------------------|--|
| Option: | Function: | |
| | NOTICE | This parameter cannot be adjusted while the motor runs. |
| [0] * | Clockwise | Change the detected encoder rotation direction without changing the wiring to the encoder. |
| [1] | Counter clockwise | |

| 17-61 Feedback Signal Monitoring | | |
|----------------------------------|---------------------|--|
| Option: | Function: | |
| [0] | Disabled | |
| [1] * | Warning | |
| [2] | Trip | |
| [3] | Jog | |
| [4] | Freeze Output | |
| [5] | Max Speed | |
| [6] | Switch to Open Loop | |
| [7] | Select Setup 1 | |
| [8] | Select Setup 2 | |
| [9] | Select Setup 3 | |
| [10] | Select Setup 4 | |
| [11] | Stop & Trip | |
| [12] | Trip/Warning | |
| [13] | Trip/Catch | |

3.18.5 17-7* Position Scaling

Parameters in this group define how the frequency converter scales and handles the position values.

| 17-70 Position Unit | | |
|---------------------|-----------|----------------|
| Option: | Function: | |
| [0] * | pu | Position unit. |
| [1] | m | Meters. |

| 17-70 Position Unit | | |
|--|-----|--|
| Select the physical unit for showing the position values on the LCP. | | |
| Option: Function: | | |
| [2] | mm | Millimeters. |
| [3] | inc | Increments. |
| [4] | ° | Degrees. |
| [5] | rad | Radians. |
| [6] | % | Percent. |
| [7] | qc | Quad count, which is 1/4 of an encoder pulse when using quadrature encoder signal. |

| 17-71 Position Unit Scale | | |
|--|----------|------------------|
| Array [2] | | |
| Enter the scaling factor for the position values. The scaling function multiplies the readout values by 10^x , where x is the value of this parameter. For example, if x=2, the value 5 is shown as 500. | | |
| The elements of the array are: | | |
| <ul style="list-style-type: none"> Index 0 is the scaling factor for readout and settings of position values in parameters or in a fieldbus. Index 1 contains exceptions. Index 1 is the scaling factor for readout of position error (<i>parameter 16-08 Position Error</i>) and for the value of <i>parameter 3-08 On Target Window</i>. | | |
| Range: | | Function: |
| 0* | [-3 - 3] | |

| 17-72 Position Unit Numerator | | |
|--|----------------------------|------------------|
| This parameter is the numerator in the equation which defines the relation between one encoder revolution and physical movement of machine. | | |
| Position unit = $\frac{\text{Par. 17-72}}{\text{Par. 17-73}} \times \text{Encoder revolutions}$ | | |
| Example: | | |
| Consider a turn table application. The encoder makes 10 revolutions when the table makes 1 revolution. The position unit is a degree. For this set-up, enter the following values: | | |
| <ul style="list-style-type: none"> <i>Parameter 17-72 Position Unit Numerator</i>=360 <i>Parameter 17-73 Position Unit Denominator</i>=10 | | |
| Range: | | Function: |
| 1024* | [-2000000000 - 2000000000] | |

| 17-73 Position Unit Denominator | | |
|--|----------------------------|------------------|
| See <i>parameter 17-72 Position Unit Numerator</i> . | | |
| Range: | | Function: |
| 1* | [-2000000000 - 2000000000] | |

| 17-74 Position Offset | | |
|--|----------------------------|---------------------|
| Enter the absolute encoder position offset. Use this parameter to adjust the zero position of the encoder without physically moving the encoder. | | |
| Set the physical unit for position values in <i>parameter 17-70 Position Unit</i> . | | |
| Range: | | Function: |
| 0 CustomReadoutUnit2* | [-2000000000 - 2000000000] | CustomReadoutUnit2] |

| 17-75 Position Recovery at Power-up | | |
|---|-----|--|
| Select the actual position after power-up when using open loop or incremental encoders. | | |
| Option: Function: | | |
| [0] * | Off | The actual position is 0 after power-up. |
| [1] | On | The frequency converter stores the actual position at power down and uses it as the actual position when powered up. |

| 17-76 Position Axis Mode | | |
|---|-------------|--|
| Select the axis type for position counting. | | |
| Option: Function: | | |
| [0] * | Linear Axis | The motion is within a position range defined by <i>parameter 3-06 Minimum Position</i> and <i>parameter 3-07 Maximum Position</i> . |
| [1] | Rotary Axis | Continuous motion, where the position changes between 0 and <i>parameter 3-07 Maximum Position</i> . When passing the maximum position, the reading restarts from 0. |

3.18.6 17-8* Position Homing

Parameters for configuring the homing function. The homing function creates a position reference in the physical machine.

| 17-80 Homing Function | | |
|--|---------------|--|
| Select the homing function. The homing function creates a position reference in the physical machine. The selected homing function can be activated with a digital input or a fieldbus bit. Homing is not required when using absolute encoders. All homing functions except [2] Home Sync Function require a start homing signal. | | |
| Option: Function: | | |
| [0] * | No Homing | No homing function. The actual position is 0 after power-up, independent of the physical machine position. |
| [1] | Home Position | Actual position is set to the value of <i>parameter 17-82 Home Position</i> , index 0. |

| 17-80 Homing Function | | |
|---|-------------------------|--|
| Select the homing function. The homing function creates a position reference in the physical machine. The selected homing function can be activated with a digital input or a fieldbus bit. Homing is not required when using absolute encoders. All homing functions except [2] Home Sync Function require a start homing signal. | | |
| Option: | Function: | |
| [2] | Home Sync Function | Homing position is synchronized with the homing sensor according to the setting in <i>parameter 17-81 Home Sync Function</i> . |
| [3] | Analog Input 53 | Use the value of analog input 53 as the actual position. The value is scaled according to <i>parameter 3-06 Minimum Position</i> and <i>parameter 3-07 Maximum Position</i> . |
| [4] | Analog Input 54 | Same as [3] Analog Input 53, but for analog input 54. |
| [10] | Forward with sensor | Perform a search for the homing sensor in forward direction using the settings in <i>parameter 17-83 Homing Speed</i> and <i>parameter 17-84 Homing Torque Limit</i> . When the frequency converter detects the homing sensor input (configured in parameter group 5-1* <i>Digital Inputs</i>), it sets the actual position to the value of <i>parameter 17-82 Home Position</i> , index 0. The frequency converter then switches to the positioning mode with a target defined in <i>parameter 17-82 Home Position</i> , index 0 + index 1. If reversing is required for going to the target position, set <i>parameter 4-10 Motor Speed Direction</i> to [2] <i>Both directions</i> . |
| [11] | Reverse with sensor | Same as [10] <i>Forward with sensor</i> , but with the search in the reverse direction. Set <i>parameter 4-10 Motor Speed Direction</i> to [1] <i>Counter clockwise</i> or [2] <i>Both directions</i> . |
| [12] | Forward Torque Limit | With this option selected, the frequency converter does the following: <ol style="list-style-type: none"> Runs forward with the set homing speed (<i>parameter 17-83 Homing Speed</i>). When the torque reaches the limit set in <i>parameter 17-84 Homing Torque Limit</i>, and the speed is lower than the value in <i>parameter 3-05 On Reference Window</i>, the actual position is set to the value of <i>parameter 17-82 Home Position</i>, index 0. The frequency converter positions to the target defined in <i>parameter 17-82 Home Position</i>, index 0 + index 1. <p>Only available in flux closed loop.</p> |
| 17-80 Homing Function | | |
| Select the homing function. The homing function creates a position reference in the physical machine. The selected homing function can be activated with a digital input or a fieldbus bit. Homing is not required when using absolute encoders. All homing functions except [2] <i>Home Sync Function</i> require a start homing signal. | | |
| Option: | Function: | |
| | | See also <i>parameter 17-85 Homing Timeout</i> . |
| [13] | Reverse Torque Limit | Same as [12] <i>Forward Torque Limit</i> but in reverse direction. Set <i>parameter 4-10 Motor Speed Direction</i> to [1] <i>Counter clockwise</i> or [2] <i>Both directions</i> . Only available in flux closed loop. |
| 17-81 Home Sync Function | | |
| Select the trigger for the homing synchronization function. Only active when [2] <i>Home Sync Function</i> is selected in <i>parameter 17-80 Homing Function</i> . The homing synchronization function sets the actual position to the value of <i>parameter 17-82 Home Position</i> : | | |
| <ul style="list-style-type: none"> Index 0 if the homing sensor is approached in the forward direction. Index 1 if the homing sensor is approached in the reverse direction. | | |
| Option: | Function: | |
| [0] * | 1st time after power | After power-up, the first detection of the homing sensor triggers the function. |
| [1] | 1st t. aft.pow. forward | After power-up, the first detection of the homing sensor in the forward direction triggers the function. |
| [2] | 1st t. aft.pow. reverse | After power-up, the first detection of the homing sensor in the reverse direction triggers the function. |
| [3] | 1st time after start | After start, the first detection of the homing sensor triggers the function. |
| [4] | 1st t. aft.str. forward | After start, the first detection of the homing sensor in the forward direction triggers the function. |
| [5] | 1st t. aft.str. reverse | After start, the first detection of the homing sensor in the reverse direction triggers the function. |
| [6] | Every time | Every detection of the homing sensor triggers the function. |
| [7] | Every time forward | Every detection of the homing sensor in the forward direction triggers the function. |

| | | |
|---|----------------------------|---|
| 17-81 Home Sync Function | | |
| Select the trigger for the homing synchronization function. Only active when [2] <i>Home Sync Function</i> is selected in parameter 17-80 <i>Homing Function</i> . The homing synchronization function sets the actual position to the value of parameter 17-82 <i>Home Position</i> : | | |
| <ul style="list-style-type: none"> • Index 0 if the homing sensor is approached in the forward direction. • Index 1 if the homing sensor is approached in the reverse direction. | | |
| Option: Function: | | |
| [8] | Every time reverse | Every detection of the homing sensor in the reverse direction triggers the function. |
| 17-82 Home Position | | |
| Array [2] | | |
| Set the homing position in position units defined in parameter group 17-7* <i>Position Scaling</i> . This is an array parameter with 2 elements. | | |
| Indices in this parameter have a different meaning in the following situations: | | |
| <ul style="list-style-type: none"> • If <i>parameter 17-80 Homing Function</i> is set to options [10]–[13], index 0 of this parameter defines the actual home position and index 1 is used as the homing offset, which defines where to stop. • If <i>Parameter 17-80 Homing Function</i> is set to [2] <i>Home Sync Function</i>, and <i>Parameter 17-81 Home Sync Function</i> is set to [0] <i>1st time after power</i>, [3] <i>1st time after start</i>, or [6] <i>Every time</i>, then indices have the following meaning: <ul style="list-style-type: none"> • Index 0 is the homing position when the homing sensor is approached in the forward direction. • Index 1 is the homing position when the homing sensor is approached in the reverse direction. | | |
| Range: Function: | | |
| 0* | [-2000000000 - 2000000000] | |
| 17-83 Homing Speed | | |
| Enter the speed for the homing functions (<i>parameter 17-80 Homing Function</i> , options [10]–[13]). | | |
| Range: Function: | | |
| 150 RPM* | [0 - 1500 RPM] | |
| 17-84 Homing Torque Limit | | |
| Enter the torque limit for the homing functions (<i>parameter 17-80 Homing Function</i> , options [10]–[13]). | | |
| Range: Function: | | |
| 160 %* | [0 - 500 %] | |
| 17-85 Homing Timeout | | |
| Enter the timeout for the homing functions (<i>parameter 17-80 Homing Function</i> , options [10]–[13]). If the frequency converter does not detect the homing sensor or does not reach the torque limit within the timeout time, it aborts the homing process and trips. | | |
| Range: Function: | | |
| 60 s* | [0.1 - 6000.0 s] | |
| 3.18.7 17-9* Position Configuration | | |
| 17-90 Absolute Position Mode | | |
| Select the behavior when executing consecutive absolute positioning commands. | | |
| Option: Function: | | |
| [0] * | Standard | When the frequency converter receives a new absolute positioning command while the previous positioning command is still in progress, it executes the new positioning command immediately without completing the previous positioning. |
| [1] | Buffered | When the frequency converter receives a new absolute positioning command while the previous positioning command is still in progress, it completes the previous command first and then executes the new positioning command. Only one positioning command can be buffered at a time. |
| 17-91 Relative Position Mode | | |
| Select which reference to use for relative positioning commands. | | |
| Option: Function: | | |
| [0] * | Target Position | The frequency converter uses the latest target position as reference for the new positioning command. The frequency converter executes the new positioning command immediately without completing the previous positioning. The new target is calculated with the formula: New target = previous target + position reference. |
| [1] | Buffered Target Pos. | The frequency converter uses the latest target position as reference for the new positioning command. The frequency converter executes the new positioning command when it completes the previous command. Only 1 positioning command can be buffered at a time. |
| [2] | Commanded Position | The frequency converter uses the commanded position as reference for the new positioning command. The frequency converter executes the new positioning command immediately without completing the previous positioning. |

| 17-91 Relative Position Mode | | |
|--|-----------------|--|
| Select which reference to use for relative positioning commands. | | |
| Option: | | Function: |
| | | The new target is calculated with the formula: New target = commanded position + position reference. |
| [3] | Actual Position | The frequency converter uses the actual position as reference for the new positioning command. The frequency converter executes the new positioning command immediately without completing the previous positioning. The new target is calculated with the formula: New target = actual position + position reference. |

| 17-92 Position Control Selection | | |
|---|------------------|---|
| This parameter allows to select the position control mode without using a digital input signal or a fieldbus bit. | | |
| Option: | | Function: |
| [0] * | No operation | Use a digital input signal or a fieldbus bit to activate the enable reference mode and the relative position mode. |
| [1] | Relativ Position | This option selects the relative position mode permanently. All positioning commands are considered to be relative. Toggling option [113] Enable Reference on a digital input or the enable reference fieldbus bit triggers relative positioning. |
| [2] | Enable Reference | This option selects the enable reference mode permanently. Any new position reference triggers an absolute positioning command with the selected position reference as target. This option cannot be used with relative positioning. |

3.19 Parameters: 18-** Data Readouts 2

| | | |
|--------------------------------------|----------------|--|
| 18-36 Analog Input X48/2 [mA] | | |
| Range: | | Function: |
| 0* | [-20 - 20] | View the actual current measured at input X48/2. |
| 18-37 Temp. Input X48/4 | | |
| Range: | | Function: |
| 0* | [-500 - 500] | View the actual temperature measured at input X48/4. The temperature unit is based on the selection in parameter 35-00 Term. X48/4 Temperature Unit. |
| 18-38 Temp. Input X48/7 | | |
| Range: | | Function: |
| 0* | [-500 - 500] | View the actual temperature measured at input X48/7. The temperature unit is based on the selection in parameter 35-02 Term. X48/7 Temperature Unit. |
| 18-39 Temp. Input X48/10 | | |
| Range: | | Function: |
| 0* | [-500 - 500] | View the actual temperature measured at input X48/10. The temperature unit is based on the selection in parameter 35-04 Term. X48/10 Temperature Unit. |

3.19.1 18-4* PGIO Data Readouts

Parameters for configuring the readout of VLT® Programmable I/O MCB 115.

| | | |
|--|------------|------------------|
| 18-43 Analog Out X49/7 | | |
| Shows the actual value at output of terminal X49/7 in V or mA. The value reflects the selection in parameter 36-40 Terminal X49/7 Analogue Output. | | |
| Range: | | Function: |
| 0* | [0 - 30] | |
| 18-44 Analog Out X49/9 | | |
| Shows the actual value at output of terminal X49/9 in V or mA. The value reflects the selection in parameter 36-50 Terminal X49/9 Analogue Output. | | |
| Range: | | Function: |
| 0* | [0 - 30] | |
| 18-45 Analog Out X49/11 | | |
| Shows the actual value at output of terminal X49/11 in V or mA. The value reflects the selection in parameter 36-60 Terminal X49/11 Analogue Output. | | |
| Range: | | Function: |
| 0* | [0 - 30] | |

3.19.2 18-5* Active Alarms/Warnings

The parameters in this group show the numbers of currently active alarms or warnings.

| | | |
|--|------------------|--|
| 18-55 Active Alarm Numbers | | |
| This parameter contains an array of up to 20 alarms that are currently active. The value 0 means no alarm. | | |
| Range: | | Function: |
| 0* | [0 - 65535] | |
| 18-56 Active Warning Numbers | | |
| This parameter contains an array of up to 20 warnings that are currently active. The value 0 means no warning. | | |
| Range: | | Function: |
| 0* | [0 - 65535] | |
| 18-60 Digital Input 2 | | |
| Range: | | Function: |
| 0* | [0 - 65535] | View the signal states from the active digital inputs. 0 = no signal, 1 = connected signal. |
| 18-90 Process PID Error | | |
| Range: | | Function: |
| 0 %* | [-200 - 200 %] | Gives the present error value used by the process PID controller. |
| 18-91 Process PID Output | | |
| Range: | | Function: |
| 0 %* | [-200 - 200 %] | Gives the present raw output value from the process PID controller. |
| 18-92 Process PID Clamped Output | | |
| Range: | | Function: |
| 0 %* | [-200 - 200 %] | Gives the present output value from the process PID controller after the clamp limits have been observed. |
| 18-93 Process PID Gain Scaled Output | | |
| Range: | | Function: |
| 0 %* | [-200 - 200 %] | Gives the present output value from the process PID controller after the clamp limits have been observed and the resulting value has been gain scaled. |

3.20 Parameters: 19-** Application Parameters

Parameters in this group are available when VLT® Motion Control Option MCO 305 is installed in the frequency converter. For information about the option, see the *VLT® Motion Control Option MCO 305 Operating Instructions*.

3.21 Parameters: 30-** Special Features

3.21.1 30-0* Wobble Function

The wobble function is primarily used for synthetic yarn winding applications. The wobble option is installed in the frequency converter controlling the traverse frequency converter. The yarn moves back and forth in a diamond pattern across the surface of the yarn package. To prevent a build-up of yarn at the same points at the surface, this pattern must be altered. The wobble option can accomplish this by continuously varying the traverse velocity in a programmable cycle. The wobble function is created by superimposing a delta frequency around a center frequency. To compensate for the inertia in the system, a quick frequency jump can be included. Suitable for elastic yarn applications, the option features a randomized wobble ratio.

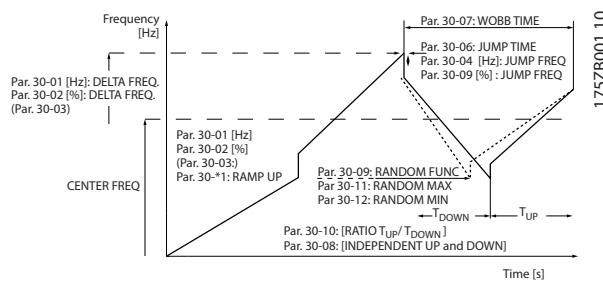

Illustration 3.65 Wobble Function

30-00 Wobble Mode

| Option: | Function: |
|---------|-----------|
|---------|-----------|

NOTICE

This parameter cannot be adjusted while the motor runs.

The standard speed open-loop mode in *parameter 1-00 Configuration Mode* is extended with a wobble function. In this parameter, it is possible to select which method to be used for the wobbler. Set the parameters as absolute values (direct frequencies) or as relative values (percentage of other parameter). Set the wobble cycle time as an absolute value or as independent up and down times. When using an absolute cycle time, the up and down times are configured through the wobble ratio.

3.21.2 Center Frequency

Use parameter group 3-1* *References* to set the center frequency.

30-01 Wobble Delta Frequency [Hz]

| Range: | Function: |
|--------|-----------|
|--------|-----------|

5 Hz*

*

[0 -
25 Hz]

The delta frequency determines the magnitude of the wobble frequency. The delta frequency is superimposed on the center frequency. Parameter 30-01 *Wobble Delta Frequency [Hz]* contains both the positive and negative delta frequency. The setting of parameter 30-01 *Wobble Delta Frequency [Hz]* must thus not exceed the setting of the center frequency. The initial ramp-up time from standstill until the wobble sequence runs is determined in chapter 3.5.2 3-1* *References*.

30-02 Wobble Delta Frequency [%]

| Range: | Function: |
|--------|-----------|
|--------|-----------|

25 %*

*

[0 -
100 %]

The delta frequency can also be expressed as percentage of the center frequency and can thus be maximum 100%. The function is the same as for parameter 30-01 *Wobble Delta Frequency [Hz]*.

| 30-04 Wobble Jump Frequency [Hz] | | |
|----------------------------------|----------------|---|
| Range: | | Function: |
| 0 Hz* | [0 - 20.0 Hz] | The jump frequency is used to compensate for the inertia in the traverse system. If a jump in the output frequency is required at the boundaries of the wobble sequence, the frequency jump is set in this parameter. If the traverse system has a very high inertia, a high jump frequency may create a torque limit warning or trip or an overvoltage warning or trip. This parameter can only be changed in stop mode. |

| 30-12 Wobble Random Ratio Min. | | |
|--------------------------------|---------------------|---|
| Range: | | Function: |
| 0.1* | [0.1 - par. 30-11] | Enter the minimum allowed wobble ratio. |

| 30-19 Wobble Delta Freq. Scaled | | |
|---------------------------------|----------------|---|
| Range: | | Function: |
| 0 Hz* | [0 - 1000 Hz] | Readout parameter. View the actual wobble delta frequency after scaling has been applied. |

3.21.3 30-2* Adv. Start Adjust

| 30-05 Wobble Jump Frequency [%] | | |
|---------------------------------|--------------|---|
| Range: | | Function: |
| 0 %* | [0 - 100 %] | The jump frequency can also be expressed as percentage of the center frequency. The function is the same as for parameter 30-04 Wobble Jump Frequency [Hz]. |

| 30-06 Wobble Jump Time | | |
|------------------------|--------------------|-----------|
| Range: | | Function: |
| Size related* | [0.005 - 5.000 s] | |

| 30-20 High Starting Torque Time [s] | | |
|-------------------------------------|-------------|---|
| Range: | | Function: |
| Size related* | [0 - 60 s] | <p>NOTICE This parameter is available for FC 302 only.</p> <p>High starting torque time for PM motor in flux control principle without feedback.</p> |

| 30-07 Wobble Sequence Time | | |
|----------------------------|---------------|---|
| Range: | | Function: |
| 10 s* | [1 - 1000 s] | This parameter determines the wobble sequence period. This parameter can only be changed in stop mode. Wobble time = $t_{up} + t_{down}$ |

| 30-08 Wobble Up/ Down Time | | |
|----------------------------|-----------------|---|
| Range: | | Function: |
| 5 s* | [0.1 - 1000 s] | Defines the individual up and down times for each wobble cycle. |

| 30-09 Wobble Random Function | | |
|------------------------------|-----|-----------|
| Option: | | Function: |
| [0] * | Off | |
| [1] | On | |

| 30-10 Wobble Ratio | | |
|--------------------|--------------|---|
| Range: | | Function: |
| 1* | [0.1 - 10] | If the ratio 0.1 is selected: t_{down} is 10 times greater than t_{up} . If the ratio 10 is selected: t_{up} is 10 times greater than t_{down} . |

| 30-11 Wobble Random Ratio Max. | | |
|--------------------------------|---------------------|---|
| Range: | | Function: |
| 10* | [par. 17-53 - 10] | Enter the maximum allowed wobble ratio. |

| 30-22 Locked Rotor Protection | | |
|-------------------------------|-----|--|
| Option: | | Function: |
| | | <p>NOTICE This parameter is available for FC 302 only.</p> <p>Available for PM motors only, in flux sensorless mode and VVC⁺ open-loop mode.</p> |
| [0] | Off | |
| [1] | On | Protects the motor from the locked rotor condition. The control algorithm detects a possible locked rotor condition in the motor and trips the frequency converter to protect the motor. |

| 30-23 Locked Rotor Detection Time [s] | | |
|---------------------------------------|---------------|--|
| Range: | | Function: |
| Size related* | [0.05 - 1 s] | Time period for detecting the locked rotor condition. A low parameter value leads to faster detection. |

| 30-24 Locked Rotor Detection Speed Error [%] | | |
|--|-------------|--|
| Range: | Function: | |
| 25 %* | [0 - 100 %] | |

| 30-25 Light Load Delay [s] | | |
|---|--------------------|--|
| Use this parameter when the light load detection is active. Enter the delay before the frequency converter activates the light load detection when the motor speed reaches the reference in parameter 30-27 Light Load Speed [%]. | | |
| Range: | Function: | |
| 0.000 s* | [0.000 - 10.000 s] | |

| 30-26 Light Load Current [%] | | |
|--|-------------|--|
| Use this parameter when the light load detection is active. Enter the reference current, which is used to determine if the motion of the lift is obstructed and if the direction is to be changed. The value is a percentage of nominal motor current in parameter 1-24 Motor Current. | | |
| Range: | Function: | |
| 0 %* | [0 - 100 %] | |

| 30-27 Light Load Speed [%] | | |
|---|-------------|--|
| Use this parameter when the light load detection is active. Enter the reference speed during the light load detection. The value is a percentage of nominal motor speed in parameter 1-25 Motor Nominal Speed. For standard asynchronous motors, the synchronous speed is used instead of parameter 1-25 Motor Nominal Speed due to slip. | | |
| Range: | Function: | |
| 0 %* | [0 - 100 %] | |

3.21.4 30-8* Compatibility

| 30-80 d-axis Inductance (Ld) | | |
|------------------------------|-----------------------|---|
| Range: | Function: | |
| Size related* | [0.000 - 1000.000 mH] | Enter the value of the d-axis inductance. Obtain the value from the permanent magnet motor datasheet. The d-axis inductance cannot be found by performing an AMA. |

| 30-81 Brake Resistor (ohm) | | |
|----------------------------|------------------------|--|
| Range: | Function: | |
| Size related* | [0.01 - 65535.00 Ohm] | Set the brake resistor value in Ω. This value is used for monitoring the power to the brake resistor in parameter 2-13 Brake Power Monitoring. This parameter is only active in frequency converters with an integral dynamic brake. |

| 30-83 Speed PID Proportional Gain | | |
|-----------------------------------|-----------|---|
| Range: | Function: | |
| Size related* | [0 - 1] | Enter the speed controller proportional gain. Quick control is obtained at high amplification. However, if amplification is too great, the process may become unstable. |

| 30-84 Process PID Proportional Gain | | |
|-------------------------------------|-----------|---|
| Range: | Function: | |
| 0.100* | [0 - 10] | Enter the process controller proportional gain. Quick control is obtained at high amplification. However, if amplification is too great, the process may become unstable. |

3.22 Parameters: 32-** MCO Basic Settings

Parameters in this group are available when VLT® Motion Control Option MCO 305 is installed in the frequency converter. For information about the option, see the *VLT® Motion Control Option MCO 305 Operating Instructions*.

3.23 Parameters: 33-** MCO Advanced Settings

Parameters in this group are available when VLT® Motion Control Option MCO 305 is installed in the frequency converter. For information about the option, see the *VLT® Motion Control Option MCO 305 Operating Instructions*.

3.24 Parameters: 34-** MCO Data Readouts

Parameters in this group are available when VLT® Motion Control Option MCO 305 is installed in the frequency converter. For information about the option, see the *VLT® Motion Control Option MCO 305 Operating Instructions*.

3.25 Parameters: 35-** Sensor Input Option

Parameters for configuring the functionality of VLT® Sensor Input MCB 114.

3.25.1 35-0* Temp. Input Mode (MCB 114)

| 35-00 Term. X48/4 Temperature Unit | | |
|--|-----------|--|
| Select the unit to be used with temperature input X48/4 settings and readouts: | | |
| Option: | Function: | |
| [60] * | °C | |
| [160] | °F | |

| 35-01 Term. X48/4 Input Type | | |
|---|---------------|--|
| View the temperature sensor type detected at input X48/4: | | |
| Option: | Function: | |
| [0] * | Not Connected | |
| [1] | PT100 2-wire | |
| [3] | PT1000 2-wire | |
| [5] | PT100 3-wire | |
| [7] | PT1000 3-wire | |

| 35-02 Term. X48/7 Temperature Unit | | |
|--|-----------|--|
| Select the unit to be used with temperature input X48/7 settings and readouts: | | |
| Option: | Function: | |
| [60] * | °C | |
| [160] | °F | |

| 35-03 Term. X48/7 Input Type | | |
|---|---------------|--|
| View the temperature sensor type detected at input X48/7: | | |
| Option: | Function: | |
| [0] * | Not Connected | |
| [1] | PT100 2-wire | |

35-03 Term. X48/7 Input Type

View the temperature sensor type detected at input X48/7:

Option: **Function:**

| | | |
|-----|---------------|--|
| [3] | PT1000 2-wire | |
| [5] | PT100 3-wire | |
| [7] | PT1000 3-wire | |

35-04 Term. X48/10 Temperature Unit

Select the unit to be used with temperature input X48/10 settings and readouts:

Option: **Function:**

| | | |
|--------|----|--|
| [60] * | °C | |
| [160] | °F | |

35-05 Term. X48/10 Input Type

View the temperature sensor type detected at input X48/10:

Option: **Function:**

| | | |
|-------|---------------|--|
| [0] * | Not Connected | |
| [1] | PT100 2-wire | |
| [3] | PT1000 2-wire | |
| [5] | PT100 3-wire | |
| [7] | PT1000 3-wire | |

35-06 Temperature Sensor Alarm Function

Select the alarm function:

Option: **Function:**

| | | |
|-------|----------------------|--|
| [0] | Off | |
| [2] | Stop | |
| [5] * | Stop and trip | |
| [27] | Forced stop and trip | |

3.25.2 35-1* Temp. Input X48/4 (MCB 114)

| 35-14 Term. X48/4 Filter Time Constant | | |
|--|----------------|---|
| Range: | Function: | |
| 0.001 s* | [0.001 - 10 s] | Enter the filter time constant. This is a first-order digital low-pass filter time constant for suppressing electrical noise in terminal X48/4. A high time constant value improves dampening but also increases the time delay through the filter. |

35-15 Term. X48/4 Temp. Monitor

This parameter facilitates the possibility of enabling or disabling the temperature monitor for terminal X48/4. Set the temperature limits in parameter 35-16 Term. X48/4 Low Temp. Limit and parameter 35-17 Term. X48/4 High Temp. Limit.

Option: **Function:**

| | | |
|-------|----------|--|
| [0] * | Disabled | |
| [1] | Enabled | |

| 35-16 Term. X48/4 Low Temp. Limit | | |
|-----------------------------------|---------------------|--|
| Range: | | Function: |
| Size related* | [-50 - par. 35-17] | Enter the minimum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/4. |

| 35-17 Term. X48/4 High Temp. Limit | | |
|------------------------------------|---------------------|--|
| Range: | | Function: |
| Size related* | [par. 35-16 - 204] | Enter the maximum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/4. |

3.25.3 35-2* Temp. Input X48/7 (MCB 114)

| 35-24 Term. X48/7 Filter Time Constant | | |
|--|-----------------|---|
| Range: | | Function: |
| 0.001 s* | [0.001 - 10 s] | Enter the filter time constant. This is a first-order digital low-pass filter time constant for suppressing electrical noise in terminal X48/7. A high time constant value improves dampening but also increases the time delay through the filter. |

| 35-25 Term. X48/7 Temp. Monitor | | |
|---|----------|-----------|
| This parameter facilitates the possibility of enabling or disabling the temperature monitor for terminal X48/7. Set the temperature limits in parameter 35-26 Term. X48/7 Low Temp. Limit and parameter 35-27 Term. X48/7 High Temp. Limit. | | |
| Option: | | Function: |
| [0] * | Disabled | |
| [1] | Enabled | |

| 35-26 Term. X48/7 Low Temp. Limit | | |
|-----------------------------------|---------------------|--|
| Range: | | Function: |
| Size related* | [-50 - par. 35-27] | Enter the minimum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/7. |

| 35-27 Term. X48/7 High Temp. Limit | | |
|------------------------------------|---------------------|--|
| Range: | | Function: |
| Size related* | [par. 35-26 - 204] | Enter the maximum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/7. |

3.25.4 35-3* Temp. Input X48/10 (MCB 114)

| 35-34 Term. X48/10 Filter Time Constant | | |
|---|-----------------|--|
| Range: | | Function: |
| 0.001 s* | [0.001 - 10 s] | Enter the filter time constant. This is a first-order digital low-pass filter time constant for suppressing electrical noise in terminal X48/10. A high time constant value improves dampening but also increases the time delay through the filter. |

| 35-35 Term. X48/10 Temp. Monitor | | |
|--|--|--|
| This parameter facilitates the possibility of enabling or disabling the temperature monitor for terminal X48/10. Set the temperature limits in parameter 35-36 Term. X48/10 Low Temp. Limit/parameter 35-37 Term. X48/10 High Temp. Limit. | | |

| Option: Function: | | |
|-------------------|----------|--|
| [0] * | Disabled | |
| [1] | Enabled | |

| 35-36 Term. X48/10 Low Temp. Limit | | |
|------------------------------------|---------------------|---|
| Range: | | Function: |
| Size related* | [-50 - par. 35-37] | Enter the minimum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/10. |

| 35-37 Term. X48/10 High Temp. Limit | | |
|-------------------------------------|---------------------|---|
| Range: | | Function: |
| Size related* | [par. 35-36 - 204] | Enter the maximum temperature reading that is expected for normal operation of the temperature sensor at terminal X48/10. |

3.25.5 35-4* Analog Input X48/2 (MCB 114)

| 35-42 Term. X48/2 Low Current | | |
|-------------------------------|----------------------|--|
| Range: | | Function: |
| 4 mA* | [0 - par. 35-43 mA] | Enter the current (mA) that corresponds to the low reference value, set in parameter 35-44 Term. X48/2 Low Ref./Feedb. Value. The value must be more than 2 mA to activate the live zero time-out function in parameter 6-01 Live Zero Timeout Function. |

| 35-43 Term. X48/2 High Current | | |
|--------------------------------|-----------------------|--|
| Range: | | Function: |
| 20 mA* | [par. 35-42 - 20 mA] | Enter the current (mA) that corresponds to the high reference value (set in parameter 35-45 Term. X48/2 High Ref./Feedb. Value). |

| 35-44 Term. X48/2 Low Ref./Feedb. Value | |
|---|---|
| Range: | Function: |
| 0* [-999999.999 - 999999.999] | Enter the reference or feedback value (in RPM, Hz, bar, and so on) that corresponds to the voltage or current set in parameter 35-42 Term. X48/2 Low Current. |

| 35-45 Term. X48/2 High Ref./Feedb. Value | |
|--|--|
| Range: | Function: |
| 100* [-999999.999 - 999999.999] | Enter the reference or feedback value (in RPM, Hz, bar, and so on) that corresponds to the voltage or current set in parameter 35-43 Term. X48/2 High Current. |

| 35-46 Term. X48/2 Filter Time Constant | |
|--|---|
| Range: | Function: |
| 0.001 s* [0.001 - 10 s] | Enter the filter time constant. This is a first-order digital low-pass filter time constant for suppressing electrical noise in terminal X48/2. A high time constant value improves dampening but also increases the time delay through the filter. |

3.26 Parameters: 36-** Programmable I/O Option

Parameters for configuring VLT® Programmable I/O MCB 115.

Parameters in this group are active only when VLT® Programmable I/O MCB 115 is installed.

3.26.1 36-0* I/O Mode

VLT® Programmable I/O MCB 115 has 3 analog inputs and 3 configurable analog outputs. Use the parameters in this group to configure the mode of the analog outputs. Terminals can be programmed to provide voltage, current, or digital output.

36-03 Terminal X49/7 Mode

Select the output mode of analog terminal X49/7.

| Option: | Function: |
|---------|----------------|
| [0] * | Voltage 0-10V |
| [1] | Voltage 2-10V |
| [2] | Current 0-20mA |
| [3] | Current 4-20mA |

36-04 Terminal X49/9 Mode

Select the output mode of analog terminal X49/9.

| Option: | Function: |
|---------|----------------|
| [0] * | Voltage 0-10V |
| [1] | Voltage 2-10V |
| [2] | Current 0-20mA |
| [3] | Current 4-20mA |

36-05 Terminal X49/11 Mode

Select the output mode of analog terminal X49/11.

| Option: | Function: |
|---------|----------------|
| [0] * | Voltage 0-10V |
| [1] | Voltage 2-10V |
| [2] | Current 0-20mA |
| [3] | Current 4-20mA |

3.26.2 36-4* Output X49/7

VLT® Programmable I/O MCB 115 has 3 analog inputs and 3 configurable analog outputs. Use the parameters in this group to configure the mode of the analog outputs.

Select the functionality of terminal X49/7.

36-40 Terminal X49/7 Analogue Output

| Option: | Function: |
|---------|------------------|
| [0] * | No operation |
| [100] | Output frequency |
| [101] | Reference |
| [102] | Feedback |
| [103] | Motor Current |

36-40 Terminal X49/7 Analogue Output

| Option: | Function: |
|---------|----------------------|
| [104] | Torque rel to limit |
| [105] | Torq relate to rated |
| [106] | Power |
| [107] | Speed |
| [108] | Torque |
| [109] | Max Out Freq |
| [139] | Bus ctrl. 0-20 mA |
| [141] | Bus ctrl 0-20mA t.o. |

36-42 Terminal X49/7 Min. Scale

Match the minimum output of terminal X49/7 with a required value. The required value is defined as a percentage of the value selected in parameter 36-40 Terminal X49/7 Analogue Output. To know more about how this parameter works, see parameter 6-52 Terminal 42 Output Max Scale.

The following example describes how the frequency converter uses this parameter.

Example

Parameter 36-03 Terminal X49/7 Mode=[0] Voltage 0-10 V

Parameter 36-40 Terminal X49/7 Analogue Output=[100] Output frequency

Parameter 4-19 Max Output Frequency=200 Hz

Application requirement: If the output frequency is lower than 20 Hz, the output of terminal X49/7 should be 0 V. To fulfil the example requirement, enter 10% in parameter 36-42 Terminal X49/7 Min. Scale.

Range: Function:

| | | |
|------|-------------|--|
| 0 %* | [0 - 200 %] | |
|------|-------------|--|

36-43 Terminal X49/7 Max. Scale

Range: Function:

| | | |
|--------|-------------|--|
| 100 %* | [0 - 200 %] | |
|--------|-------------|--|

36-44 Terminal X49/7 Bus Control

This parameter contains the output level of terminal X49/7 if the terminal is controlled by a fieldbus.

Range: Function:

| | | |
|------|-------------|--|
| 0 %* | [0 - 100 %] | |
|------|-------------|--|

36-45 Terminal X49/7 Timeout Preset

The frequency converter sends the value of this parameter to the output terminal when the terminal is controlled by a fieldbus and a timeout is detected.

Range: Function:

| | | |
|------|-------------|--|
| 0 %* | [0 - 100 %] | |
|------|-------------|--|

3.26.3 36-5* Output X49/9

VLT® Programmable I/O MCB 115 has 3 analog inputs and 3 configurable analog outputs. Use the parameters in this group to configure the mode of the analog outputs.

36-50 Terminal X49/9 Analogue Output

Select the functionality of terminal X49/9.

| Option: | | Function: |
|---------|----------------------|-----------|
| [0] * | No operation | |
| [100] | Output frequency | |
| [101] | Reference | |
| [102] | Feedback | |
| [103] | Motor Current | |
| [104] | Torque rel to limit | |
| [105] | Torq relate to rated | |
| [106] | Power | |
| [107] | Speed | |
| [108] | Torque | |
| [109] | Max Out Freq | |
| [139] | Bus ctrl. 0-20 mA | |
| [141] | Bus ctrl 0-20mA t.o. | |

36-52 Terminal X49/9 Min. ScaleMatch the minimum output of terminal X49/9 with a required value. For more information, see *parameter 36-42 Terminal X49/7 Min. Scale*.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 200 %] |

36-53 Terminal X49/9 Max. ScaleScale the maximum output of terminal X49/9. For more information, see *parameter 36-43 Terminal X49/7 Max. Scale*.

| Range: | Function: |
|--------|-------------|
| 100 %* | [0 - 200 %] |

36-54 Terminal X49/9 Bus Control

This parameter contains the output level of terminal X49/9 if the terminal is controlled by a fieldbus.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 100 %] |

36-55 Terminal X49/9 Timeout Preset

The frequency converter sends the value of this parameter to the output terminal when the terminal is controlled by a fieldbus and a timeout is detected.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 100 %] |

3.26.4 36-6* Output X49/11

VLT® Programmable I/O MCB 115 has 3 analog inputs and 3 configurable analog outputs. Use the parameters in this group to configure the mode of the analog outputs.

36-60 Terminal X49/11 Analogue Output

Select the functionality of terminal X49/11.

| Option: | Function: |
|---------|----------------------|
| [0] * | No operation |
| [100] | Output frequency |
| [101] | Reference |
| [102] | Feedback |
| [103] | Motor Current |
| [104] | Torque rel to limit |
| [105] | Torq relate to rated |
| [106] | Power |
| [107] | Speed |
| [108] | Torque |
| [109] | Max Out Freq |
| [139] | Bus ctrl. 0-20 mA |
| [141] | Bus ctrl 0-20mA t.o. |

36-62 Terminal X49/11 Min. ScaleMatch the minimum output of terminal X49/11 with a required value. For more information, see *parameter 36-42 Terminal X49/7 Min. Scale*.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 200 %] |

36-63 Terminal X49/11 Max. ScaleScale the maximum output of terminal X49/11. For more information, see *parameter 36-43 Terminal X49/7 Max. Scale*.

| Range: | Function: |
|--------|-------------|
| 100 %* | [0 - 200 %] |

36-64 Terminal X49/11 Bus Control

This parameter contains the output level of terminal X49/11 if the terminal is controlled by a fieldbus.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 100 %] |

36-65 Terminal X49/11 Timeout Preset

The frequency converter sends the value of this parameter to the output terminal when the terminal is controlled by a fieldbus and a timeout is detected.

| Range: | Function: |
|--------|-------------|
| 0 %* | [0 - 100 %] |

3.27 Parameters: 42-** Safety Functions

The parameters in group 42 are available when a safety option is installed in the frequency converter. For information about the safety related parameters, see the operating instructions for the safety options:

- *Safety Option MCB 150/151 Operating Instructions.*
- *Safety Option MCB 152 Operating Instructions.*

4 Parameter Lists

4.1 Parameter Lists and Options

4.1.1 Introduction

Frequency converter series

All = valid for FC 301 and FC 302 series

01 = valid for FC 301 only

02 = valid for FC 302 only

Changes during operation

True means that the parameter can be changed while the frequency converter is in operation. False means that the frequency converter must be stopped before a change can be made.

4 Set-up

All set-ups: the parameter can be set individually in each of the 4 set-ups, for example, 1 single parameter can have 4 different data values.

1 set-up: The data value is the same in all set-ups.

| Data type | Description | Type |
|-----------|--------------------------------------|--------|
| 2 | Integer 8 | Int8 |
| 3 | Integer 16 | Int16 |
| 4 | Integer 32 | Int32 |
| 5 | Unsigned 8 | Uint8 |
| 6 | Unsigned 16 | Uint16 |
| 7 | Unsigned 32 | Uint32 |
| 9 | Visible string | VisStr |
| 33 | Normalised value 2 bytes | N2 |
| 35 | Bit sequence of 16 boolean variables | V2 |
| 54 | Time difference w/o date | TimD |

Table 4.1 Data Type

4.1.2 Conversion

The various attributes of each parameter are displayed in factory setting. Parameter values are transferred as whole numbers only. Conversion factors are therefore used to transfer decimals.

A conversion factor of 0.1 means that the value transferred is multiplied by 0.1. The value 100 is therefore read as 10.0.

Examples:

- 0 s ⇒ conversion index 0
- 0.00 s ⇒ conversion index -2
- 0 ms ⇒ conversion index -3
- 0.00 ms ⇒ conversion index -5

| Conversion index | Conversion factor |
|------------------|-------------------|
| 100 | 1 |
| 75 | 3600000 |
| 74 | 3600 |
| 70 | 60 |
| 67 | 1/60 |
| 6 | 1000000 |
| 5 | 100000 |
| 4 | 10000 |
| 3 | 1000 |
| 2 | 100 |
| 1 | 10 |
| 0 | 1 |
| -1 | 0.1 |
| -2 | 0.01 |
| -3 | 0.001 |
| -4 | 0.0001 |
| -5 | 0.00001 |
| -6 | 0.000001 |

Table 4.2 Conversion Table

4.1.3 Active/Inactive Parameters in Different Control Modes

+ = active

- = not active

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|---|----------|-------------------------|-------------------------|------------------------------|----------------------|------------------|-----------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| 0-** Operation and Display (all parameters) | + | + | + | + | - | - | - | - |
| Parameter 1-00 Configuration Mode | | | | | | | | |
| [0] Speed open loop | + | + | + | - | - | - | - | - |
| [1] Speed closed loop | - | + | - | + | - | - | - | - |
| [2] Torque | - | - | - | + | - | - | - | - |
| [3] Process | + | + | + | - | - | - | - | - |
| [4] Torque open loop | - | + | - | - | - | - | - | - |
| [5] Wobble | + | + | + | + | - | - | - | - |
| [6] Surface winder | + | + | + | - | - | - | - | - |
| [7] Ext. PID open loop | + | + | + | - | - | - | - | - |
| [8] Ext. PID closed loop | - | + | - | + | - | - | - | - |
| Parameter 1-02 Flux Motor Feedback Source | - | - | - | + | - | - | - | - |
| Parameter 1-03 Torque Characteristics | - | see ^{1, 2, 3)} | see ^{1, 3, 4)} | see ^{1, 3, 4)} | - | - | - | - |
| Parameter 1-04 Overload Mode | + | + | + | + | + | - | + | + |
| Parameter 1-05 Local Mode Configuration | + | + | + | + | + | - | + | + |
| Parameter 1-06 Clockwise Direction | + | + | + | + | + | - | + | + |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|--|----------|------------------------|------------------------|------------------------------|----------------------|------------------|--------------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 1-20 Motor Power [kW] (Par. 023 = International) | + | + | + | + | - | - | - | - |
| Parameter 1-21 Motor Power [HP] (Par. 023 = US) | + | + | + | + | - | - | - | - |
| Parameter 1-22 Motor Voltage | + | + | + | + | - | - | - | - |
| Parameter 1-23 Motor Frequency | + | + | + | + | - | - | - | - |
| Parameter 1-24 Motor Current | + | + | + | + | - | - | - | - |
| Parameter 1-25 Motor Nominal Speed | + | + | + | + | - | - | - | - |
| Parameter 1-26 Motor Cont. Rated Torque | - | - | - | - | + | - | + | + |
| Parameter 1-29 Automatic Motor Adaptation (AMA) | + | + | + | + | - | - | - | - |
| Parameter 1-30 Stator Resistance (R_s) | + | + | + | + | + | - | - | - |
| Parameter 1-31 Rotor Resistance (R_r) | - | + see ⁵⁾ | + | + | - | - | - | - |
| Parameter 1-33 Stator Leakage Reactance (X_1) | + | + | + | + | + | - | - | - |
| Parameter 1-34 Rotor Leakage Reactance (X_2) | - | + see ⁵⁾ | + | + | - | - | - | - |
| Parameter 1-35 Main Reactance (X_h) | + | + | + | + | + | - | - | - |
| Parameter 1-36 Iron Loss Resistance (R_{fe}) | - | - | + | + | - | - | - | - |
| Parameter 1-37 d-axis Inductance (L_d) | - | - | - | - | - | - | + | + |
| Parameter 1-39 Motor Poles | + | + | + | + | - | - | | |
| Parameter 1-40 Back EMF at 1000 RPM | - | - | - | - | + | - | + | + |
| Parameter 1-41 Motor Angle Offset | - | - | - | - | - | - | - | + |
| Parameter 1-50 Motor Magnetisation at Zero Speed | - | + | - | - | - | - | - | - |
| Parameter 1-51 Min Speed Normal Magnetising [RPM] (Par. 002 = rmp) | - | + | - | - | - | - | - | - |
| Parameter 1-52 Min Speed Normal Magnetising [Hz] (Par. 002 = Hz) | - | + | - | - | - | - | - | - |
| Parameter 1-53 Model Shift Frequency | - | - | + | + | - | - | + | + |
| Parameter 1-54 Voltage reduction in fieldweakening | - | - | + see ⁶⁾ | + | - | - | - | - |
| Parameter 1-55 U/f Characteristic - U | + | - | - | - | + | - | - | - |
| Parameter 1-56 U/f Characteristic - F | + | - | - | - | + | - | - | - |
| Parameter 1-58 Flying Start Test Pulses Current | - | + | - | - | - | - | - | - |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|---|------------------------|------------------------|------------------------|------------------------------|------------------------|------------------|------------------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 1-59 Flying Start Test Pulses Frequency | - | + | - | - | - | - | - | - |
| Parameter 1-60 Low Speed Load Compensation | - | + | - | - | - | - | - | - |
| Parameter 1-61 High Speed Load Compensation | - | + | - | - | - | - | - | - |
| Parameter 1-62 Slip Compensation | - | + see ⁷⁾ | + | - | - | - | - | - |
| Parameter 1-63 Slip Compensation Time Constant | + see ⁸⁾ | + | + see ⁸⁾ | - | + see ⁸⁾ | - | + see ⁸⁾ | - |
| Parameter 1-64 Resonance Damping | + | + | + | - | + | - | + | - |
| Parameter 1-65 Resonance Damping Time Constant | + | + | + | - | + | - | + | - |
| Parameter 1-66 Min. Current at Low Speed | - | - | + | + | - | - | + | + |
| Parameter 1-67 Load Type | - | - | + | - | - | - | - | - |
| Parameter 1-68 Motor Inertia | - | - | + | - | - | - | - | - |
| Parameter 1-69 System Inertia | - | - | + | - | - | - | - | - |
| Parameter 1-71 Start Delay | + | + | + | + | + | - | + | + |
| Parameter 1-72 Start Function | + | + | + | + | + | - | + | + |
| Parameter 1-73 Flying Start | - | + | + | + | - | - | - | - |
| Parameter 1-74 Start Speed [RPM] (Par. 002 = rmp) | - | + | - | - | - | - | - | - |
| Parameter 1-75 Start Speed [Hz] (Par. 002 = Hz) | - | + | - | - | - | - | - | - |
| Parameter 1-76 Start Current | - | + | - | - | - | - | - | - |
| Parameter 1-80 Function at Stop | + | + | + | + | + | - | + | + |

| Parameter 4-38 Tracking Error Ramping Timeout | + | + | + | + | - | - | - | - |
| Parameter 4-39 Tracking Error After Ramping Timeout | + | + | + | + | - | - | - | - |
| Parameter 4-50 Warning Current Low | + | + | + | + | - | - | - | - |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|---|----------|----------------------|-----------------|------------------------------|----------------------|------------------|-----------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 4-51 Warning Current High | + | + | + | + | - | - | - | - |
| Parameter 4-52 Warning Speed Low | + | + | + | + | - | - | - | - |
| Parameter 4-53 Warning Speed High | + | + | + | + | - | - | - | - |
| Parameter 4-54 Warning Reference Low | + | + | + | + | - | - | - | - |
| Parameter 4-55 Warning Reference High | + | + | + | + | - | - | - | - |
| Parameter 4-56 Warning Feedback Low | + | + | + | + | - | - | - | - |
| Parameter 4-57 Warning Feedback High | + | + | + | + | - | - | - | - |
| Parameter 4-58 Missing Motor Phase Function | + | + | + | + | - | - | - | - |
| Parameter 4-60 Bypass Speed From [RPM] | + | + | + | + | - | - | - | - |
| Parameter 4-61 Bypass Speed From [Hz] | + | + | + | + | - | - | - | - |
| Parameter 4-62 Bypass Speed To [RPM] | + | + | + | + | - | - | - | - |
| Parameter 4-63 Bypass Speed To [Hz] | + | + | + | + | - | - | - | - |
| 5-** Digital in/out (all parameters except 5-70 and 71) | + | + | + | + | - | - | - | - |
| Parameter 5-70 Term 32/33 Pulses Per Revolution | - | + see ¹²⁾ | - | + | - | - | - | - |
| Parameter 5-71 Term 32/33 Encoder Direction | - | + see ¹²⁾ | - | + | - | - | - | - |
| 6-** Analog in/out (all parameters) | + | + | + | + | - | - | - | - |
| Parameter 7-00 Speed PID Feedback Source | - | + see ¹²⁾ | - | + | - | - | - | - |
| Parameter 7-02 Speed PID Proportional Gain | - | + see ¹²⁾ | + | + | - | - | - | - |
| Parameter 7-03 Speed PID Integral Time | - | + see ¹²⁾ | + | + | - | - | - | - |
| Parameter 7-04 Speed PID Differentiation Time | - | + see ¹²⁾ | + | + | - | - | - | - |
| Parameter 7-05 Speed PID Diff. Gain Limit | - | + see ¹²⁾ | + | + | - | - | - | - |
| Parameter 7-06 Speed PID Lowpass Filter Time | - | + see ¹²⁾ | + | + | - | - | - | - |
| Parameter 7-07 Speed PID Feedback Gear Ratio | - | + see ¹²⁾ | - | + | - | - | - | - |
| Parameter 7-08 Speed PID Accel. Feed Forward Factor | - | + see ¹²⁾ | - | - | - | - | - | - |
| Parameter 7-12 Torque PI Proportional Gain | - | + see ¹⁰⁾ | - | - | - | - | - | - |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|--|----------|----------------------|-----------------|------------------------------|----------------------|------------------|-----------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 7-13 Torque PI Integration Time | - | + see ¹⁰⁾ | - | - | - | - | - | - |
| Parameter 7-20 Process CL Feedback 1 Resource | + | + | + | + | - | - | - | - |
| Parameter 7-22 Process CL Feedback 2 Resource | + | + | + | + | - | - | - | - |
| Parameter 7-30 Process PID Normal/ Inverse Control | + | + | + | + | - | - | - | - |
| Parameter 7-31 Process PID Anti Windup | + | + | + | + | - | - | - | - |
| Parameter 7-32 Process PID Start Speed | + | + | + | + | - | - | - | - |
| Parameter 7-33 Process PID Proportional Gain | + | + | + | + | - | - | - | - |
| Parameter 7-34 Process PID Integral Time | + | + | + | + | - | - | - | - |
| Parameter 7-35 Process PID Differentiation Time | + | + | + | + | - | - | - | - |
| Parameter 7-36 Process PID Diff. Gain Limit | + | + | + | + | - | - | - | - |
| Parameter 7-38 Process PID Feed Forward Factor | + | + | + | + | - | - | - | - |
| Parameter 7-39 On Reference Bandwidth | + | + | + | + | - | - | - | - |
| Parameter 7-40 Process PID I-part Reset | + | + | + | + | - | - | - | - |
| Parameter 7-41 Process PID Output Neg. Clamp | + | + | + | + | - | - | - | - |
| Parameter 7-42 Process PID Output Pos. Clamp | + | + | + | + | - | - | - | - |
| Parameter 7-43 Process PID Gain Scale at Min. Ref. | + | + | + | + | - | - | - | - |
| Parameter 7-44 Process PID Gain Scale at Max. Ref. | + | + | + | + | - | - | - | - |
| Parameter 7-45 Process PID Feed Fwd Resource | + | + | + | + | - | - | - | - |
| Parameter 7-46 Process PID Feed Fwd Normal/ Inv. Ctrl. | + | + | + | + | - | - | - | - |
| Parameter 7-48 PCD Feed Forward | + | + | + | + | - | - | - | - |
| Parameter 7-49 Process PID Output Normal/ Inv. Ctrl. | + | + | + | + | - | - | - | - |
| Parameter 7-50 Process PID Extended PID | + | + | + | + | - | - | - | - |
| Parameter 7-51 Process PID Feed Fwd Gain | + | + | + | + | - | - | - | - |
| Parameter 7-52 Process PID Feed Fwd Ramp up | + | + | + | + | - | - | - | - |
| Parameter 7-53 Process PID Feed Fwd Ramp down | + | + | + | + | - | - | - | - |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|---|----------|------------------|-----------------|------------------------------|----------------------|------------------|-----------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 7-56 Process PID Ref. Filter Time | + | + | + | + | - | - | - | - |
| Parameter 7-57 Process PID Fb. Filter Time | + | + | + | + | - | - | - | - |
| 8-** Communications and options (all parameters) | + | + | + | + | - | - | - | - |
| 13-** Smart logic control (all parameters) | + | + | + | + | - | - | - | - |
| Parameter 14-00 Switching Pattern | + | + | + | + | - | - | - | - |
| Parameter 14-01 Switching Frequency | + | + | + | + | - | - | - | - |
| Parameter 14-03 Overmodulation | + | + | + | + | - | - | - | - |
| Parameter 14-04 PWM Random | + | + | + | + | - | - | - | - |
| Parameter 14-06 Dead Time Compensation | + | + | + | + | - | - | - | - |
| Parameter 14-10 Mains Failure | | | | | | | | |
| [0] No function | + | + | + | + | - | - | - | - |
| [1] Ctrl. ramp down | - | + | + | + | - | - | - | - |
| [2] Ctrl. ramp down, trip | - | + | + | + | - | - | - | - |
| [3] Coasting | + | + | + | + | - | - | - | - |
| [4] Kinetic back-up | - | + | + | + | - | - | - | - |
| [5] Kinetic back-up, trip | - | + | + | + | - | - | - | - |
| [6] Alarm | + | + | + | + | - | - | - | - |
| Parameter 14-11 Mains Voltage at Mains Fault | + | + | + | + | - | - | - | - |
| Parameter 14-12 Function at Mains Imbalance | + | + | + | + | - | - | - | - |
| Parameter 14-14 Kin. Backup Time Out | - | - | + | + | - | - | - | - |
| Parameter 14-15 Kin. Backup Trip Recovery Level | + | + | + | + | - | - | - | - |
| Parameter 14-20 Reset Mode | + | + | + | + | - | - | - | - |
| Parameter 14-21 Automatic Restart Time | + | + | + | + | - | - | - | - |
| Parameter 14-22 Operation Mode | + | + | + | + | - | - | - | - |
| Parameter 14-24 Trip Delay at Current Limit | + | + | + | + | - | - | - | - |
| Parameter 14-25 Trip Delay at Torque Limit | + | + | + | + | - | - | - | - |
| Parameter 14-26 Trip Delay at Inverter Fault | + | + | + | + | - | - | - | - |
| Parameter 14-29 Service Code | + | + | + | + | - | - | - | - |
| Parameter 14-30 Current Lim Ctrl, Proportional Gain | + | + | + | + | - | - | - | - |
| Parameter 14-31 Current Lim Ctrl, Integration Time | + | + | + | + | - | - | - | - |
| Parameter 14-32 Current Lim Ctrl, Filter Time | + | + | + | + | - | - | - | - |
| Parameter 14-35 Stall Protection | - | - | + | + | - | - | - | - |

| Parameter 1-10 Motor Construction | AC motor | | | | PM non-salient motor | | | |
|---|----------|------------------|-----------------|------------------------------|----------------------|------------------|-----------------|------------------------------|
| Parameter 1-01 Motor Control Principle | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback | U/f mode | VVC ⁺ | Flux sensorless | Flux w/ motor feedback |
| Parameter 14-36 Fieldweakening Function | - | - | + | + | - | - | + | + |
| Parameter 14-40 VT Level | - | + | + | + | - | - | - | - |
| Parameter 14-41 AEO Minimum Magnetisation | - | + | + | + | - | - | - | - |
| Parameter 14-42 Minimum AEO Frequency | - | + | + | + | - | - | - | - |
| Parameter 14-43 Motor Cospfi | - | + | + | + | - | - | - | - |
| Parameter 14-50 RFI Filter | + | + | + | + | - | - | - | - |
| Parameter 14-51 DC Link Compensation | + | + | + | + | - | - | - | - |
| Parameter 14-52 Fan Control | + | + | + | + | - | - | - | - |
| Parameter 14-53 Fan Monitor | + | + | + | + | - | - | - | - |
| Parameter 14-55 Output Filter | + | + | + | + | - | - | - | - |
| Parameter 14-56 Capacitance Output Filter | - | - | + | + | - | - | - | - |
| Parameter 14-57 Inductance Output Filter | - | - | + | + | - | - | - | - |
| Parameter 14-74 Leg. Ext. Status Word | + | + | + | + | - | - | - | - |
| Parameter 14-80 Option Supplied by External 24VDC | + | + | + | + | - | - | - | - |
| Parameter 14-89 Option Detection | + | + | + | + | - | - | - | - |
| Parameter 14-90 Fault Level | + | + | + | + | - | - | - | - |

Table 4.3 Active/Inactive Parameters in Different Control Modes

- 1) Constant torque.
- 2) Variable torque.
- 3) AEO.
- 4) Constant power.
- 5) Used in flystart.
- 6) Used when parameter 1-03 Torque Characteristics is constant power.
- 7) Not used when parameter 1-03 Torque Characteristics = VT.
- 8) Part of resonance damping.
- 9) Not AC brake.
- 10) Torque open loop.
- 11) Torque.
- 12) Speed closed loop.

4.1.4 0-** Operation/Display

| Parameter # | Parameter description | Default value | 4 set-up | Change during operation | Conversion index | Type |
|--------------------------------|------------------------------------|--------------------------|-------------|-------------------------|------------------|------------|
| 0-0* Basic Settings | | | | | | |
| 0-01 | Language | [0] English | 1 set-up | TRUE | - | Uint8 |
| 0-02 | Motor Speed Unit | [0] RPM | 2 set-ups | FALSE | - | Uint8 |
| 0-03 | Regional Settings | [0] International | 2 set-ups | FALSE | - | Uint8 |
| 0-04 | Operating State at Power-up (Hand) | [1] Forced stop, ref=old | All set-ups | TRUE | - | Uint8 |
| 0-09 | Performance Monitor | 0 % | All set-ups | TRUE | -1 | Uint16 |
| 0-1* Set-up Operations | | | | | | |
| 0-10 | Active Set-up | [1] Set-up 1 | 1 set-up | TRUE | - | Uint8 |
| 0-11 | Edit Set-up | [1] Set-up 1 | All set-ups | TRUE | - | Uint8 |
| 0-12 | This Set-up Linked to | [0] Not linked | All set-ups | FALSE | - | Uint8 |
| 0-13 | Readout: Linked Set-ups | 0 N/A | All set-ups | FALSE | 0 | Uint16 |
| 0-14 | Readout: Edit Set-ups / Channel | 0 N/A | All set-ups | TRUE | 0 | Int32 |
| 0-15 | Readout: actual setup | 0 N/A | All set-ups | FALSE | 0 | Uint8 |
| 0-2* LCP Display | | | | | | |
| 0-20 | Display Line 1.1 Small | 1617 | All set-ups | TRUE | - | Uint16 |
| 0-21 | Display Line 1.2 Small | 1614 | All set-ups | TRUE | - | Uint16 |
| 0-22 | Display Line 1.3 Small | 1610 | All set-ups | TRUE | - | Uint16 |
| 0-23 | Display Line 2 Large | 1613 | All set-ups | TRUE | - | Uint16 |

5 Troubleshooting

5.1 Status Messages

5.1.1 Warnings/Alarm Messages

A warning or an alarm is signalled by the relevant indicator light on the front of the frequency converter and indicated by a code on the display.

A warning remains active until its cause is no longer present. Under certain circumstances, operation of the motor may still be continued. Warning messages may be critical, but are not necessarily so.

In the event of an alarm, the frequency converter trips. Reset the alarm to resume operation once the cause has been rectified.

3 ways to reset:

- Press [Reset].
- Via a digital input with the reset function.
- Via serial communication/optional fieldbus.

NOTICE

After a manual reset pressing [Reset], press [Auto On] to restart the motor.

If an alarm cannot be reset, the reason may be that its cause has not been rectified, or the alarm is trip locked (see also *Table 5.1*).

Alarms that are trip locked offer extra protection, meaning that the mains supply must be switched off before the alarm can be reset. After being switched back on, the frequency converter is no longer blocked and can be reset once the cause has been rectified.

Alarms that are not trip locked can also be reset using the automatic reset function in *parameter 14-20 Reset Mode* (Warning: Automatic wake-up is possible.)

If a warning or alarm is marked against a code in *Table 5.1*, this means that either a warning occurs before an alarm, or it is possible to specify whether a warning or an alarm should be shown for a given fault.

This is possible, for instance, in *parameter 1-90 Motor Thermal Protection*. After an alarm or trip, the motor carries on coasting, and the alarm and warning flash. Once the problem has been rectified, only the alarm continues flashing until the frequency converter is reset.

NOTICE

No missing motor phase detection (numbers 30-32) and no stall detection are active when *parameter 1-10 Motor Construction* is set to [1] PM non-salient SPM.

Table 5.1 Alarm/Warning Code List

(X) Dependent on parameter

1) Cannot be auto reset via parameter 14-20 Reset Mode

A trip is the action following an alarm. The trip coasts the motor and is reset by pressing [Reset] or by a digital input (parameter group 5-1* *Digital Inputs*). The original event that caused an alarm cannot damage the frequency converter or cause dangerous conditions. A trip lock is an action when an alarm occurs, which could damage the frequency converter or connected parts. A trip lock situation can only be reset by a power cycling.

| | |
|-------------|----------------|
| Warning | Yellow |
| Alarm | Flashing red |
| Trip locked | Yellow and red |

Table 5.2 Indicator Light

Table 5.3 Description of Alarm Word, Warning Word, and Extended Status Word

The alarm words, warning words and extended status words can be read out via a serial bus or optional fieldbus for diagnostics. See also *parameter 16-94 Ext. Status Word*.

WARNING 1, 10 Volts low

The control card voltage is less than 10 V from terminal 50. Remove some of the load from terminal 50, as the 10 V supply is overloaded. Maximum 15 mA or minimum 590 Ω.

A short circuit in a connected potentiometer or incorrect wiring of the potentiometer can cause this condition.

Troubleshooting

- Remove the wiring from terminal 50. If the warning clears, the problem is with the wiring. If the warning does not clear, replace the control card.

WARNING/ALARM 2, Live zero error

This warning or alarm only appears if programmed in *parameter 6-01 Live Zero Timeout Function*. The signal on 1 of the analog inputs is less than 50% of the minimum value programmed for that input. Broken wiring or a faulty device sending the signal can cause this condition.

Troubleshooting

- Check connections on all analog mains terminals.
 - Control card terminals 53 and 54 for signals, terminal 55 common.
 - VLT® General Purpose I/O MCB 101 terminals 11 and 12 for signals, terminal 10 common.
 - VLT® Analog I/O Option MCB 109 terminals 1, 3, and 5 for signals, terminals 2, 4, and 6 common.
- Check that the frequency converter programming and switch settings match the analog signal type.
- Perform an input terminal signal test.

WARNING/ALARM 3, No motor

No motor is connected to the output of the frequency converter.

WARNING/ALARM 4, Mains phase loss

A phase is missing on the supply side, or the mains voltage imbalance is too high. This message also appears for a fault in the input rectifier. Options are programmed in *parameter 14-12 Function at Mains Imbalance*.

Troubleshooting

- Check the supply voltage and supply currents to the frequency converter.

WARNING 5, DC link voltage high

The DC-link voltage (DC) is higher than the high-voltage warning limit. The limit depends on the frequency converter voltage rating. The unit is still active.

WARNING 6, DC link voltage low

The DC-link voltage (DC) is lower than the low voltage warning limit. The limit depends on the frequency converter voltage rating. The unit is still active.

WARNING/ALARM 7, DC overvoltage

If the DC-link voltage exceeds the limit, the frequency converter trips after a certain time.

Troubleshooting

- Connect a brake resistor.
- Extend the ramp time.
- Change the ramp type.
- Activate the functions in *parameter 2-10 Brake Function*.
- Increase *parameter 14-26 Trip Delay at Inverter Fault*.

- If the alarm/warning occurs during a power sag, use kinetic back-up (*parameter 14-10 Mains Failure*).

WARNING/ALARM 8, DC under voltage

If the DC-link voltage drops below the undervoltage limit, the frequency converter checks for 24 V DC back-up supply. If no 24 V DC back-up supply is connected, the frequency converter trips after a fixed time delay. The time delay varies with unit size.

Troubleshooting

- Check that the supply voltage matches the frequency converter voltage.
- Perform an input voltage test.
- Perform a soft-charge circuit test.

WARNING/ALARM 9, Inverter overload

The frequency converter has run with more than 100% overload for too long and is about to cut out. The counter for electronic thermal inverter protection issues a warning at 98% and trips at 100% with an alarm. The frequency converter cannot be reset until the counter is below 90%.

Troubleshooting

- Compare the output current shown on the LCP with the frequency converter rated current.
- Compare the output current shown on the LCP with the measured motor current.
- Show the thermal frequency converter load on the LCP and monitor the value. When running above the frequency converter continuous current rating, the counter increases. When running below the frequency converter continuous current rating, the counter decreases.

WARNING/ALARM 10, Motor overload temperature

According to the electronic thermal protection (ETR), the motor is too hot. Select whether the frequency converter issues a warning or an alarm when the counter is >90% if *parameter 1-90 Motor Thermal Protection* is set to warning options, or whether the frequency converter trips when the counter reaches 100% if *parameter 1-90 Motor Thermal Protection* is set to trip options. The fault occurs when the motor runs with more than 100% overload for too long.

Troubleshooting

- Check for motor overheating.
- Check if the motor is mechanically overloaded.
- Check that the motor current set in *parameter 1-24 Motor Current* is correct.
- Ensure that the motor data in *parameters 1-20 to 1-25* are set correctly.
- If an external fan is in use, check that it is selected in *parameter 1-91 Motor External Fan*.
- Running AMA in *parameter 1-29 Automatic Motor Adaptation (AMA)* tunes the frequency converter

to the motor more accurately and reduces thermal loading.

WARNING/ALARM 11, Motor thermistor overtemp

Check whether the thermistor is disconnected. Select whether the frequency converter issues a warning or an alarm in *parameter 1-90 Motor Thermal Protection*.

Troubleshooting

- Check for motor overheating.
- Check if the motor is mechanically overloaded.
- When using terminal 53 or 54, check that the thermistor is connected correctly between either terminal 53 or 54 (analog voltage input) and terminal 50 (+10 V supply). Also check that the terminal switch for 53 or 54 is set for voltage. Check that *parameter 1-93 Thermistor Source* selects terminal 53 or 54.
- When using terminal 18, 19, 31, 32, or 33 (digital inputs), check that the thermistor is connected correctly between the digital input terminal used (digital input PNP only) and terminal 50. Select the terminal to use in *parameter 1-93 Thermistor Source*.

WARNING/ALARM 12, Torque limit

The torque has exceeded the value in *parameter 4-16 Torque Limit Motor Mode* or the value in *parameter 4-17 Torque Limit Generator Mode*.

Parameter 14-25 Trip Delay at Torque Limit can change this warning from a warning-only condition to a warning followed by an alarm.

Troubleshooting

- If the motor torque limit is exceeded during ramp-up, extend the ramp-up time.
- If the generator torque limit is exceeded during ramp-down, extend the ramp-down time.
- If torque limit occurs while running, increase the torque limit. Make sure that the system can operate safely at a higher torque.
- Check the application for excessive current draw on the motor.

WARNING/ALARM 13, Over current

The inverter peak current limit (approximately 200% of the rated current) is exceeded. The warning lasts approximately 1.5 s, then the frequency converter trips and issues an alarm. Shock loading or quick acceleration with high-inertia loads can cause this fault. If the acceleration during ramp-up is quick, the fault can also appear after kinetic back-up. If extended mechanical brake control is selected, a trip can be reset externally.

Troubleshooting

- Remove the power and check if the motor shaft can be turned.
- Check that the motor size matches the frequency converter.
- Check that the motor data is correct in parameters 1-20 to 1-25.

ALARM 14, Earth (ground) fault

There is current from the output phase to ground, either in the cable between the frequency converter and the motor, or in the motor itself. Ground fault is detected by the current transducers that measure current going out from the frequency converter and current going into the frequency converter from the motor. Ground fault is issued if the deviation of the 2 currents is too large (the current going out of the frequency converter should be the same as the current going into the frequency converter).

Troubleshooting

- Remove power to the frequency converter and repair the ground fault.
- Check for ground faults in the motor by measuring the resistance to ground of the motor cables and the motor with a megohmmeter.
- Reset any potential individual offset in the 3 current transducers in FC 302. Perform the manual initialization or perform a complete AMA. This method is most relevant after changing the power card.

ALARM 15, Hardware mismatch

A fitted option is not operational with the present control board hardware or software.

Record the value of the following parameters and contact Danfoss:

- Parameter 15-40 FC Type.
- Parameter 15-41 Power Section.
- Parameter 15-42 Voltage.
- Parameter 15-43 Software Version.
- Parameter 15-45 Actual Typecode String.
- Parameter 15-49 SW ID Control Card.
- Parameter 15-50 SW ID Power Card.
- Parameter 15-60 Option Mounted.
- Parameter 15-61 Option SW Version (for each option slot).

ALARM 16, Short circuit

There is short-circuiting in the motor or motor wiring.

Troubleshooting

- Remove the power to the frequency converter and repair the short circuit.

WARNING/ALARM 17, Control word timeout

There is no communication to the frequency converter.

The warning is only active when parameter 8-04 Control Word Timeout Function is NOT set to [0] Off.

If parameter 8-04 Control Word Timeout Function is set to [5] Stop and Trip, a warning appears, and the frequency converter ramps down to a stop and shows an alarm.

Troubleshooting

- Check the connections on the serial communication cable.
- Increase parameter 8-03 Control Word Timeout Time.
- Check the operation of the communication equipment.
- Verify that proper EMC installation was performed.

WARNING/ALARM 20, Temp. input error

The temperature sensor is not connected.

WARNING/ALARM 21, Parameter error

The parameter is out of range. The parameter number is reported in the display.

Troubleshooting

- Set the affected parameter to a valid value.

WARNING/ALARM 22, Hoist mechanical brake

The value of this warning/alarm shows the type of warning/alarm.

0 = The torque reference was not reached before timeout (parameter 2-27 Torque Ramp Up Time).

1 = Expected brake feedback not received before timeout (parameter 2-23 Activate Brake Delay, parameter 2-25 Brake Release Time).

WARNING 23, Internal fan fault

The fan warning function is a protective function that checks if the fan is running/mounted. The fan warning can be disabled in parameter 14-53 Fan Monitor ([0] Disabled).

For frequency converters with DC fans, there is a feedback sensor mounted in the fan. If the fan is commanded to run and there is no feedback from the sensor, this alarm appears. For frequency converters with AC fans, the voltage to the fan is monitored.

Troubleshooting

- Check for proper fan operation.
- Cycle power to the frequency converter and check that the fan operates briefly at start-up.
- Check the sensors on the control card.

WARNING 24, External fan fault

The fan warning function is a protective function that checks if the fan is running/mounted. The fan warning can be disabled in parameter 14-53 Fan Monitor ([0] Disabled).

For frequency converters with DC fans, there is a feedback sensor mounted in the fan. If the fan is commanded to run

and there is no feedback from the sensor, this alarm appears. For frequency converters with AC fans, the voltage to the fan is monitored.

Troubleshooting

- Check for proper fan operation.
- Cycle power to the frequency converter and check that the fan operates briefly at start-up.
- Check the sensors on the heat sink.

WARNING 25, Brake resistor short circuit

The brake resistor is monitored during operation. If a short circuit occurs, the brake function is disabled and the warning appears. The frequency converter is still operational, but without the brake function.

Troubleshooting

- Remove the power to the frequency converter and replace the brake resistor (refer to *parameter 2-15 Brake Check*).

WARNING/ALARM 26, Brake resistor power limit

The power transmitted to the brake resistor is calculated as a mean value over the last 120 s of run time. The calculation is based on the DC-link voltage and the brake resistor value set in *parameter 2-16 AC brake Max. Current*. The warning is active when the dissipated braking power is higher than 90% of the brake resistor power. If option [2] *Trip* is selected in *parameter 2-13 Brake Power Monitoring*, the frequency converter trips when the dissipated braking power reaches 100%.

WARNING/ALARM 27, Brake chopper fault

The brake transistor is monitored during operation, and if a short circuit occurs, the brake function is disabled, and a warning is issued. The frequency converter is still operational, but since the brake transistor has short-circuited, substantial power is transmitted to the brake resistor, even if it is inactive.

Troubleshooting

- Remove power to the frequency converter and remove the brake resistor.

WARNING/ALARM 28, Brake check failed

The brake resistor is not connected or not working.

Troubleshooting

- Check *parameter 2-15 Brake Check*.

ALARM 29, Heat Sink temp

The maximum temperature of the heat sink is exceeded. The temperature fault is not reset until the temperature drops below a defined heat sink temperature. The trip and reset points are different based on the frequency converter power size.

Troubleshooting

Check for the following conditions.

- The ambient temperature is too high.
- The motor cables are too long.

- Incorrect airflow clearance above and below the frequency converter.
- Blocked airflow around the frequency converter.
- Damaged heat sink fan.
- Dirty heat sink.

ALARM 30, Motor phase U missing

Motor phase U between the frequency converter and the motor is missing.

Troubleshooting

- Remove the power from the frequency converter and check motor phase U.

ALARM 31, Motor phase V missing

Motor phase V between the frequency converter and the motor is missing.

Troubleshooting

- Remove the power from the frequency converter and check motor phase V.

ALARM 32, Motor phase W missing

Motor phase W between the frequency converter and the motor is missing.

Troubleshooting

- Remove the power from the frequency converter and check motor phase W.

ALARM 33, Inrush fault

Too many power-ups have occurred within a short time period.

Troubleshooting

- Let the unit cool to operating temperature.

WARNING/ALARM 34, Fieldbus communication fault

The fieldbus on the communication option card is not working.

WARNING/ALARM 35, Option fault

An option alarm is received. The alarm is option-specific. The most likely cause is a power-up or a communication fault.

WARNING/ALARM 36, Mains failure

This warning/alarm is only active if the supply voltage to the frequency converter is lost and *parameter 14-10 Mains Failure* is not set to [0] *No Function*.

Troubleshooting

- Check the fuses to the frequency converter and mains supply to the unit.

ALARM 37, Phase imbalance

There is a current imbalance between the power units.

ALARM 38, Internal fault

When an internal fault occurs, a code number defined in *Table 5.4* is shown.

Troubleshooting

- Cycle power.
- Check that the option is properly installed.

- Check for loose or missing wiring.

It may be necessary to contact the Danfoss supplier or service department. Note the code number for further troubleshooting directions.

| Number | Text |
|-----------|--|
| 0 | The serial port cannot be initialized. Contact the Danfoss supplier or Danfoss service department. |
| 256–258 | The power EEPROM data is defective or too old. Replace the power card. |
| 512–519 | Internal fault. Contact the Danfoss supplier or Danfoss service department. |
| 783 | Parameter value outside of minimum/maximum limits. |
| 1024–1284 | Internal fault. Contact the Danfoss supplier or the Danfoss service department. |
| 1299 | The option software in slot A is too old. |
| 1300 | The option software in slot B is too old. |
| 1302 | The option software in slot C1 is too old. |
| 1315 | The option software in slot A is not supported/allowed. |
| 1316 | The option software in slot B is not supported/allowed. |
| 1318 | The option software in slot C1 is not supported/allowed. |
| 1379–2819 | Internal fault. Contact the Danfoss supplier or Danfoss service department. |
| 1792 | Hardware reset of digital signal processor. |
| 1793 | Motor derived parameters not transferred correctly to the digital signal processor. |
| 1794 | Power data not transferred correctly at power-up to the digital signal processor. |
| 1795 | The digital signal processor has received too many unknown SPI telegrams. The frequency converter also uses this fault code if the MCO does not power up correctly. This situation can occur due to poor EMC protection or improper grounding. |
| 1796 | RAM copy error. |
| 2561 | Replace the control card. |
| 2820 | LCP stack overflow. |
| 2821 | Serial port overflow. |
| 2822 | USB port overflow. |
| 3072–5122 | Parameter value is outside its limits. |
| 5123 | Option in slot A: Hardware incompatible with the control board hardware. |
| 5124 | Option in slot B: Hardware incompatible with the control board hardware. |
| 5125 | Option in slot C0: Hardware incompatible with the control board hardware. |
| 5126 | Option in slot C1: Hardware incompatible with the control board hardware. |
| 5376–6231 | Internal fault. Contact the Danfoss supplier or Danfoss service department. |

Table 5.4 Internal Fault Codes

ALARM 39, Heat sink sensor

No feedback from the heat sink temperature sensor.

The signal from the IGBT thermal sensor is not available on the power card. The problem could be on the power card, on the gatedrive card, or the ribbon cable between the power card and gatedrive card.

WARNING 40, Overload of digital output terminal 27

Check the load connected to terminal 27 or remove the short circuit connection. Check *parameter 5-00 Digital I/O Mode* and *parameter 5-01 Terminal 27 Mode*.

WARNING 41, Overload of digital output terminal 29

Check the load connected to terminal 29 or remove the short circuit connection. Also check *parameter 5-00 Digital I/O Mode* and *parameter 5-02 Terminal 29 Mode*.

WARNING 42, Overload of digital output on X30/6 or overload of digital output on X30/7

For terminal X30/6, check the load connected to terminal X30/6 or remove the short circuit connection. Also check *parameter 5-32 Term X30/6 Digi Out (MCB 101)* (VLT® General Purpose I/O MCB 101).

For terminal X30/7, check the load connected to terminal X30/7 or remove the short circuit connection. Check *parameter 5-33 Term X30/7 Digi Out (MCB 101)* (VLT® General Purpose I/O MCB 101).

ALARM 43, Ext. supply

VLT® Extended Relay Option MCB 113 is mounted without external 24 V DC. Either connect a 24 V DC external supply or specify that no external supply is used via *parameter 14-80 Option Supplied by External 24VDC, [0] No*. A change in *parameter 14-80 Option Supplied by External 24VDC* requires a power cycle.

ALARM 45, Earth fault 2

Ground fault.

Troubleshooting

- Check for proper grounding and loose connections.
- Check for proper wire size.
- Check the motor cables for short circuits or leakage currents.

ALARM 46, Power card supply

The supply on the power card is out of range.

There are 3 supplies generated by the switch mode supply (SMPS) on the power card:

- 24 V.
- 5 V.
- ±18 V.

When powered with VLT® 24 V DC with 24 V DC Supply MCB 107, only the 24 V and 5 V supplies are monitored. When powered with 3-phase mains voltage, all 3 supplies are monitored.

Troubleshooting

- Check for a defective power card.
- Check for a defective control card.
- Check for a defective option card.
- If a 24 V DC supply is used, verify proper supply power.

WARNING 47, 24 V supply low

The supply on the power card is out of range.

There are 3 supplies generated by the switch mode supply (SMPS) on the power card:

- 24 V.
- 5 V.
- ± 18 V.

Troubleshooting

- Check for a defective power card.

WARNING 48, 1.8 V supply low

The 1.8 V DC supply used on the control card is outside of the allowable limits. The supply is measured on the control card.

Troubleshooting

- Check for a defective control card.
- If an option card is present, check for overvoltage.

WARNING 49, Speed limit

The warning is shown when the speed is outside of the specified range in *parameter 4-11 Motor Speed Low Limit [RPM]* and *parameter 4-13 Motor Speed High Limit [RPM]*.

When the speed is below the specified limit in *parameter 1-86 Trip Speed Low [RPM]* (except when starting or stopping), the frequency converter trips.

ALARM 50, AMA calibration failed

Contact the Danfoss supplier or Danfoss service department.

ALARM 51, AMA check U_{nom} and I_{nom}

The settings for motor voltage, motor current, and motor power are wrong.

Troubleshooting

- Check the settings in *parameters 1-20 to 1-25*.

ALARM 52, AMA low I_{nom}

The motor current is too low.

Troubleshooting

- Check the settings in *parameter 1-24 Motor Current*.

ALARM 53, AMA motor too big

The motor is too large for the AMA to operate.

ALARM 54, AMA motor too small

The motor is too small for the AMA to operate.

ALARM 55, AMA parameter out of range

AMA cannot run because the parameter values of the motor are outside of the acceptable range.

ALARM 56, AMA interrupted by user

The AMA is manually interrupted.

ALARM 57, AMA internal fault

Try to restart AMA. Repeated restarts can overheat the motor.

ALARM 58, AMA Internal fault

Contact the Danfoss supplier.

WARNING 59, Current limit

The current is higher than the value in *parameter 4-18 Current Limit*. Ensure that motor data in *parameters 1-20 to 1-25* is set correctly. Increase the current limit if necessary. Ensure that the system can operate safely at a higher limit.

WARNING 60, External interlock

A digital input signal indicates a fault condition external to the frequency converter. An external interlock has commanded the frequency converter to trip. Clear the external fault condition. To resume normal operation, apply 24 V DC to the terminal programmed for external interlock, and reset the frequency converter.

WARNING/ALARM 61, Feedback error

An error between calculated speed and speed measurement from feedback device.

Troubleshooting

- Check the settings for warning/alarm/disabling in *parameter 4-30 Motor Feedback Loss Function*.
- Set the tolerable error in *parameter 4-31 Motor Feedback Speed Error*.
- Set the tolerable feedback loss time in *parameter 4-32 Motor Feedback Loss Timeout*.

WARNING 62, Output frequency at maximum limit

The output frequency has reached the value set in *parameter 4-19 Max Output Frequency*. Check the application for possible causes. Possibly increase the output frequency limit. Be sure that the system can operate safely at a higher output frequency. The warning clears when the output drops below the maximum limit.

ALARM 63, Mechanical brake low

The actual motor current has not exceeded the release brake current within the start delay time window.

WARNING 64, Voltage limit

The combination of load and speed requires a motor voltage higher than what can be provided due to the actual DC-link voltage.

WARNING/ALARM 65, Control card over temperature

The cut-out temperature of the control card is 85 °C.

Troubleshooting

- Check that the ambient operating temperature is within the limits.
- Check for clogged filters.
- Check the fan operation.
- Check the control card.

WARNING 66, Heat sink temperature low

The frequency converter is too cold to operate. This warning is based on the temperature sensor in the IGBT module. Increase the ambient temperature of the unit. Also, a trickle amount of current can be supplied to the frequency converter whenever the motor is stopped by setting parameter 2-00 DC Hold/Preheat Current to 5% and parameter 1-80 Function at Stop.

ALARM 67, Option module configuration has changed

One or more options have either been added or removed since the last power-down. Check that the configuration change is intentional and reset the unit.

ALARM 68, Safe Stop activated

Safe Torque Off (STO) has been activated. To resume normal operation, apply 24 V DC to terminal 37, then send a reset signal (via bus, digital I/O, or by pressing [Reset]).

ALARM 69, Power card temperature

The temperature sensor on the power card is either too hot or too cold.

Troubleshooting

- Check that the ambient operating temperature is within limits.
- Check for clogged filters.
- Check fan operation.
- Check the power card.

ALARM 70, Illegal FC configuration

The control card and power card are incompatible. To check compatibility, contact the Danfoss supplier with the type code from the unit nameplate and the part numbers of the cards.

ALARM 71, PTC 1 safe stop

STO has been activated from the VLT® PTC Thermistor Card MCB 112 (motor too warm). Normal operation can be resumed when the MCB 112 applies 24 V DC to terminal 37 again (when the motor temperature reaches an acceptable level) and when the digital input from the MCB 112 is deactivated. When that happens, send a reset signal (via bus or digital I/O, or press [Reset]).

ALARM 72, Dangerous failure

STO with trip lock. An unexpected combination of STO commands has occurred:

- VLT® PTC Thermistor Card MCB 112 enables X44/10, but STO is not enabled.
- MCB 112 is the only device using STO (specified through selection [4] PTC 1 Alarm or [5] PTC 1 Warning in parameter 5-19 Terminal 37 Safe Stop), STO is activated, and X44/10 is not activated.

WARNING 73, Safe Stop auto restart

STO activated. With automatic restart enabled, the motor can start when the fault is cleared.

ALARM 74, PTC Thermistor

Alarm related to VLT® PTC Thermistor Card MCB 112. The PTC is not working.

ALARM 75, Illegal profile sel.

Do not write the parameter value while the motor runs. Stop the motor before writing the MCO profile to parameter 8-10 Control Word Profile.

WARNING 76, Power unit setup

The required number of power units does not match the detected number of active power units.

This warning occurs when replacing a module for an F-size enclosure if the power-specific data in the module power card does not match the rest of the frequency converter.

Troubleshooting

- Confirm that the spare part and its power card are the correct part number.

WARNING 77, Reduced power mode

The frequency converter is operating in reduced power mode (less than the allowed number of inverter sections). This warning is generated on power cycle when the frequency converter is set to run with fewer inverters and remains on.

ALARM 78, Tracking error

The difference between setpoint value and actual value exceeds the value in parameter 4-35 Tracking Error.

Troubleshooting

- Disable the function or select an alarm/warning in parameter 4-34 Tracking Error Function.
- Investigate the mechanics around the load and motor, check feedback connections from motor encoder to frequency converter.
- Select motor feedback function in parameter 4-30 Motor Feedback Loss Function.
- Adjust tracking error band in parameter 4-35 Tracking Error and parameter 4-37 Tracking Error Ramping.

ALARM 79, Illegal power section configuration

The scaling card has an incorrect part number or is not installed. The MK102 connector on the power card could not be installed.

ALARM 80, Drive initialised to default value

Parameter settings are initialized to default settings after a manual reset. To clear the alarm, reset the unit.

ALARM 81, CSIV corrupt

CSIV file has syntax errors.

ALARM 82, CSIV parameter error

CSIV failed to initialize a parameter.

ALARM 83, Illegal option combination

The mounted options are incompatible.

ALARM 84, No safety option

The safety option was removed without applying a general reset. Reconnect the safety option.

ALARM 88, Option detection

A change in the option layout is detected.

Parameter 14-89 Option Detection is set to [0] *Frozen configuration* and the option layout has been changed.

- To apply the change, enable option layout changes in *parameter 14-89 Option Detection*.
- Alternatively, restore the correct option configuration.

WARNING 89, Mechanical brake sliding

The hoist brake monitor detects a motor speed exceeding 10 RPM.

ALARM 90, Feedback monitor

Check the connection to encoder/resolver option and, if necessary, replace VLT® Encoder Input MCB 102 or VLT® Resolver Input MCB 103.

ALARM 91, Analog input 54 wrong settings

Set switch S202 in position OFF (voltage input) when a KTY sensor is connected to analog input terminal 54.

ALARM 99, Locked rotor

Rotor is blocked.

WARNING/ALARM 101, Speed monitor

The motor speed monitor value is outside range. See *parameter 4-43 Motor Speed Monitor Function*.

WARNING/ALARM 104, Mixing fan fault

The fan is not operating. The fan monitor checks that the fan is spinning at power-up or whenever the mixing fan is turned on. The mixing-fan fault can be configured as a warning or an alarm trip in *parameter 14-53 Fan Monitor*.

Troubleshooting

- Cycle power to the frequency converter to determine if the warning/alarm returns.

WARNING/ALARM 122, Mot. rotat. unexp.

The frequency converter performs a function that requires the motor to be at standstill, for example DC hold for PM motors.

WARNING 123, Motor Mod. Changed

The motor selected in *parameter 1-11 Motor Model* is not correct. Check the motor model.

WARNING 163, ATEX ETR cur.lim.warning

The frequency converter has run above the characteristic curve for more than 50 s. The warning is activated at 83% and deactivated at 65% of the permitted thermal overload.

ALARM 164, ATEX ETR cur.lim.alarm

Operating above the characteristic curve for more than 60 s within a period of 600 s activates the alarm, and the frequency converter trips.

WARNING 165, ATEX ETR freq.lim.warning

The frequency converter is running for more than 50 s below the permitted minimum frequency (*parameter 1-98 ATEX ETR interpol. points freq.*).

ALARM 166, ATEX ETR freq.lim.alarm

The frequency converter has operated for more than 60 s (in a period of 600 s) below the permitted minimum frequency (*parameter 1-98 ATEX ETR interpol. points freq.*).

WARNING/ALARM 210, Position tracking

The actual position error exceeds the value in *parameter 4-71 Maximum Position Error*.

Parameter 4-70 Position Error Function defines whether this is a warning or an alarm.

WARNING/ALARM 211, Position limit

The position is outside the limits defined in *parameter 3-06 Minimum Position* and *parameter 3-07 Maximum Position*. *Parameter 4-73 Position Limit Function* defines the function at this warning/alarm.

WARNING/ALARM 212, Homing not done

A homing function is selected in *parameter 17-80 Homing Function* and absolute positioning is executed before homing is completed.

ALARM 213, Homing timeout

Homing was started but did not finish within the time defined in *parameter 17-85 Homing Timeout*.

ALARM 214, No sensor input

A homing process with a homing function that requires a sensor, or touch probe positioning is started with no input defined for the sensor.

WARNING 220, Configuration file version not supported

The frequency converter does not support the current configuration file version. Customization is aborted.

ALARM 246, Power card supply

This alarm is only for enclosure size F frequency converters. It is equivalent to *alarm 46, Power card supply*.

The report value in the alarm log indicates which power module generated the alarm:

1 = Inverter module to the far left.

2 = Middle inverter module in F2 or F4 frequency converter.

2 = Right inverter module in F1 or F3 frequency converter.

3 = Right inverter module in F2 or F4 frequency converter.

5 = Rectifier module.

WARNING 249, Rect. low temperature

The temperature of the rectifier heat sink is lower than expected.

Troubleshooting

- Check the temperature sensor.

WARNING 250, New spare part

The power or switch mode supply has been exchanged. Restore the frequency converter type code in the EEPROM. Select the correct type code in *parameter 14-23 Typecode Setting* according to the label on the frequency converter. Remember to select Save to EEPROM at the end.

WARNING 251, New typecode

The power card or other components are replaced and the type code has changed.

WARNING 253, Digital output X49/9 overload

Digital output X49/9 is overloaded.

WARNING 254, Digital output X49/11 overload

Digital output X49/11 is overloaded.

WARNING 255, Digital output X49/7 overload

Digital output X49/7 is overloaded.

ALARM 430, PWM Disabled

The PWM on the power card is disabled.
