

PANEL ADAPTER KIT - MOUNTING INSTRUCTIONS

Loose option: VACON-PAN-HMPA-MK01, Plus code: +HMPA

Introduction

The Panel Adapter is intended to replace the standard keypad in cases where a keypad is not needed or a door installation kit (loose option: VACON-PAN-HMDR-MK01-...) is used. The Panel Adapter is IP54 protected.

For the installation, you need the following parts included in the delivery. **Make sure that you have received all the necessary parts!**

1. Cover A
2. Cover B
3. Screws PT3.5 x 8 (4 pcs)
4. Foam rubber gasket

Indication LED

The LED on the Panel adapter gives indications about the status of the drive. The status of the LED on the panel adapter and door installation kit depends on the drive type.

Note the location of the LED on the panel adapter in the picture to the right.

Drive type	LED location	LED status				
		Ready	Run	Fault	Alarm	Software download
Vacon 100/ Flow	Panel adapter	-	-	-	-	-
	Door installation kit	**	* (green)	* (red)	* (orange)	***
HVAC	Panel adapter	**	**	**	**	***
	Door installation kit	-	-	-	-	-

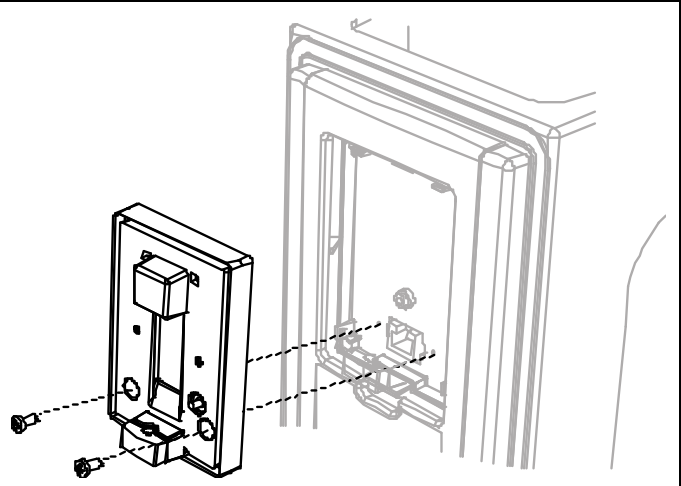

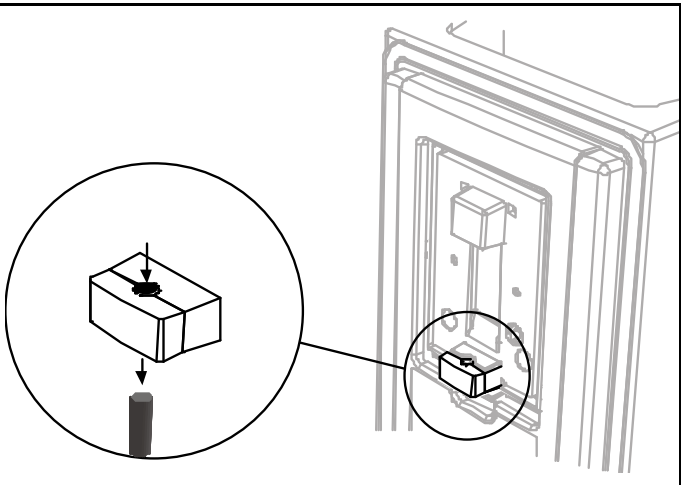

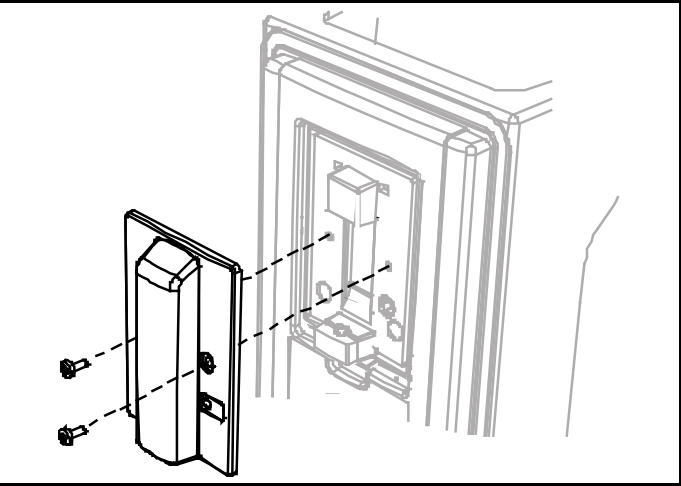

- OFF

* ON

** Blinking slowly (1 sec ON - 1 sec OFF)

*** Blinking fast

Mounting procedure

1	<p>Fix the transparent cover B to the keypad base using the two screws provided. Tighten the screws to max. 0.8 Nm.</p>	 A technical line drawing showing the assembly of a keypad. On the left, a separate transparent cover (B) is shown with two screws being inserted into its base. On the right, a larger keypad unit is shown with the transparent cover being aligned and attached to its front panel. Dashed lines indicate the alignment and the position of the screws.
2	<p>If a connection cable for the keypad is needed, detach the foam rubber gasket from the cover and punch out the cylinder-formed piece of foam rubber in order to open way for the cable. The gasket can then be split into two pieces.</p>	 A technical line drawing showing the removal of a foam rubber gasket. On the right, a keypad unit is shown with a circular gasket on its front panel. A circular callout on the left shows a close-up of the gasket being punched with a tool to create a hole. Another circular callout on the right shows the gasket being split into two pieces.
3	<p>Then fix the black cover A with the two screws provided. Tighten the screws to max. 0.8 Nm.</p>	 A technical line drawing showing the assembly of a keypad. On the left, a separate black cover (A) is shown with two screws being inserted into its base. On the right, a larger keypad unit is shown with the black cover being aligned and attached to its front panel. Dashed lines indicate the alignment and the position of the screws.
