1. General

Using the Vacon Flange Mounting Kit, you can mount your Vacon NX frequency converter through the cabinet wall so that the control unit of the drive remains inside the cabinet.

The correct installation of the Flange Mounting Kit affects the IP protection class of the frequency converter. After the installation, the control unit is protected according to IP21 and the power unit according to IP54 (unless the frequency converter was originally IP21-protected). See figure below.

According to standard IEC 60529 (EN 60529), the IP54 frequency converter enclosure provides protection against dust and water sprayed from all directions. Limited ingress of both is permitted.

16. Apply the sealing tape attached around the opening along the edge.
The kit contains a greater amount of tape than what you might need. Only use such an amount of tape required by the dimensions of the opening. See Figure 1.
17. Fit the frequency converter in the opening.
NOTE: The frequency converter will not fit in the opening in a straight position. Tip the converter positioning the lower end first in the opening. See Figures 2 and 3.
